MERN STACK

MERN stack is a web development framework. It consists of MongoDB, ExpressJS, ReactJS, and NodeJS as its working components. The user interacts with the ReactJS UI components at the application front-end residing in the browser. This frontend is served by the application backend residing in a server, through ExpressJS running on top of NodeJS. Any interaction that causes a data change request is sent to the NodeJS based Express server, which grabs data from the MongoDB database if required, and returns the data to the frontend of the application, which is then presented to the user. It is an open-source framework mainly used to develop web-based or mobile applications and is supported by the community.

KUBERNETS

Kubernetes is open-source orchestration software for deploying, managing and scaling containers. Kubernetes orchestrates clusters of virtual machines and schedules containers to run on those virtual machines based on their available compute resources and the resource requirements of each container.Containers are grouped into pods, the basic operational unit for Kubernetes and those pods scale to your desired state. Kubernetes also automatically manages service discovery, incorporates load balancing, tracks resource allocation and scales based on compute utilisation. And, it checks the health of individual resources and enables apps to self-heal by automatically restarting or replicating containers.

ALUMINI CORNER

The four years in Dr.M.G.R.Educational Research Institute helped to positively develop myself personally and professionally. Currently I am working as Technical Service Engineer in Fujitsu Limited, a Japanese based ITES company. Department of Information Technology (IT) provided me a great platform to learn many skills and technologies by hosting many technical events and seminars throughout the four years. Our department let us improve our organizational skills by letting us students to organize technical symposium and conferences. And Industrial visits to various places like BSNL, Kalpakkam nuclear power plant to learn and understand what are the procedures and processes that actually happens inside a nuclear power plant. It was a great experience pursuing my B.Tech IT in Dr.M.G.R.Educational Research Institute. Those experiences had made me what I am today. It is a great honor to be alumni of Department of IT.
