<u>Collaborative Activities – January to December 2023</u>

(Total number of collaborative activities in India and Abroad for Academic, Clinical Training, Industry – Internship, Project work, Student Exchange, Faculty Exchange and Collaborative Research Programmes etc.)

Faculty	Department	Title of the Collaborative Activity	Name of the collaborating agency with contact details	Name of the participants	Source of financial support	Y ear of collaboration	Duration	Nature of the activity
Engineering and Technology	Biotechnology	Pharmacological effect of gold nanoparticles from red algae Halymenia venusta on A549 cell line	Madras Medical College, Chennai	Thirunavukkarasu Palaniyandi, Gomathy Baskar, Sandhiya Viswanathan	NIL	2023	3 months	Research work
Engineering and Technology	Biotechnology	Recent and advanced therapy for oral cancer	Madras Medical College, Chennai	Thirunavukkarasu Palaniyandi, Gomathy Baskar, Sandhiya Viswanathan	NIL	2023	3 months	Research work
Engineering and Technology	Biotechnology	Anti-cancer activity of Hypnea valentiae seaweed loaded gold nanoparticles through EMT signaling pathway in A549 cells	R.K. Algae Research Centre	Thirunavukkarasu Palaniyandi	NIL	2023	3 months	Research work
Engineering and Technology	Biotechnology	Green synthesis of gold nanoparticles using Halymenia pseudofloresii extracts and their antioxidant, antimicrobial, and anti-cancer activities	R.K. Algae Research Centre	Thirunavukkarasu Palaniyandi, Sandhiya Viswanathan, Pranav Prabhakaran, Gomathy Baskar: Thirunavuk karasu Palaniyandi, Sandhiya ViswanathanThiru navukkarasu Palaniyandi, Sandhiya	NIL	2023	3 months	Research work
Engineering and Technology	Biotechnology	Synthesis, characterization, cytotoxicity, and antimicrobial studies of green synthesized silver nanoparticles using red seaweed Champia parvula	R.K. Algae Research Centre	Thirunavukkarasu Palaniyandi, Sandhiya Viswanathan	NIL	2023	3 months	Research work
Engineering and Technology	Biotechnology	Biosynthesis of iron nanoparticles using brown algae Spatoglossum asperum and its antioxidant and anticancer activities through in vitro and in silico studies	R.K. Algae Research Centre	Thirunavukkarasu Palaniyandia, Gomathy Baskaran	NIL	2023	3 months	Research work
Engineering and Technology	Biotechnology	Bio-fabrication of gold nanoparticles from brown seaweeds for anticancer activity against glioblastoma through invitro and molecular docking approaches	R.K. Algae Research Centre	Thirunavukkarasu Palaniyandia, Gomathy Baskaran, Sandhiya Viswanathan	NIL	2023	4 months	Research work
Engineering and Technology	Biotechnology	Biomarkers and biosensors for early cancer diagnosis, monitoring and prognosis	Madras Medical College, Chennai	Mugip Rahaman Abdul Wahab, Thirunavukkarasu Palaniyandi, Sandhiya viswanathan, Gomathy Baskar, Hemapreethi Surendran	NIL	2023	4 months	Research work
Engineering and Technology	Biotechnology	Internship	PrimeGen	M. Amirthavarshini	NIL	2023	2 weeks	Internship

1.Introduction

Greensynthesisissimplerandsafertousethanchemi calandphys- ical methods, which take a lot of time and have complicated steps [1]. Therehavebeenreportsofeffectivenanomaterialsynth esisusing crude algae and plant extrades . Due to their unique biological, iphlys chemical, and environmental conditions, green synthesized nanoparticles(NPs)haverecently attracted considerables tu dyattention[3].

Inresearch, the potential uses of nanoparticles have exploded in the medical field as drug carriers, and in particular for the rapeutic targeting [4].

Nanoparticlesaretinyparticles,typicallyrangingbetw een1and100nm in size. NPs have distinct physical, chemical, and biological character- istics compared to bulk materials due to their crystal structures, increasedsurface-to-

volumeratios, and controlled targeting and release properties [5]. NPs may be produced using a variety of physical, chemical, and mechanical techniques. These procedures are not only expensive and harmful to the environment, but they also pose health risks such as cytotoxicity, genotoxicity, and carcinogenicity [6]. Therefore, there is an immediate need for the synthesis of environmentally safe nanoparticles to replace harmful compounds in a variety of [applications]. Importantly, NPs enable the visualization of cancer

Abstract

Oralcancerisacommonanddeadlykindoftissueinvasion, hasahighdeathrate, and may induce metastasis that mostly affects adults over the age of 40. Most in vitro traditional methods for studying cancer have included the use of monolayer cellculturesandseveralanimalmodels. There is a worldwide effort underway to reduce excessive use of laboratory animals since, although being physiologically adequate, animal models rarely succeed in exactly mimicking human models. 3D culture modelshavegainedgreat attentionintheareaofbiomedicine becauseof their capacity to replicate parent tissue. There are many benefits to using a drug deliveryapproachbasedonnanoparticlesincancertreatment.Becauseofthis,in vitrotestmethodologiesarecrucialforevaluatingtheefficacyofprospectivenovel nanoparticle drug delivery systems. This review discusses current advances in the utilityof3Dcellculturemodelsincludingmulticellularspheroids,patient-derived explant cultures, organoids, xenografts, 3D bioprinting, and organoid-on-a-chip models. A spects of nanoparticle-based drug discovery that have utilized 2D and 3D and 3D are the control of the control ofcultures for a better understanding of genes implicated in oral cancers are also included in this review.

KEYWORDS

1 |INTRODUCTION

Cancerrankshighamongthemostlethaldiseasedueto uncontrolled cell proliferation may invade and

achofwhich has its unique gene signature (Palanisamy et al. 2010). Among all cancers, oral cancer is the sixth most prevalent, with 890,000 new cases and more than 50,000 cancer-related deaths per year (Tanetal., 2020). It commonly affects males more like lythan females (M:

F=1.5:1) withdeathrate supto 50% (Sailanetal., 2021). Oral cancer is caused by hereditary changes that alter cell division and is associated with excessive smoking and alcohol consumption (Leemansetal., 2018; Zhengetal., 2021). Oral cance risoften

spread to other organs. The high costanddifficulty of developing a universal treatment for cancer are

largelyattributabletothegreatrangeofcancerkinds,e

diagnosedatanuntreatablestagewhencancercellsareaggressive andintrinsicdrug-resistant. Therefore, early detection of oral cancer is crucial for increasing the disease survival rate (Wolffetal., 2012). Traditional head and neck squamous cell carcinoma (HNSCC) pharmacotherapy is often in effective because of chemoresistance and severe systemicad verse effects of current regimens, which limit dosage escalation. To overcome this limitation, novel approaches are required to treat. The discovery of new approaches requires the use of preclinical

modelsthatcompriseallmajorcomponentswhichmay leadtotreatmentresistance(Gronbachetal.,2020). Moreover, the tumormicroenvironment(TME), which is complex, three-dimensional, and invivo, plays an important role in cancerde velopment and progression (Knowltonetal.,2015). So, the TME is a useful technique for anticancer drugs creening.

ABSTRACT

The biological synthesis of gold nanoparticles (AuNPs) offers enormous promise for the formulation of a newgenerationanti-carcinogenicdrugs.Inthisstudy,AuNPswereeco-friendlysynthesizedusingthemarineredalgae species,Hypnea valentiae. Multiple spectroscopic methods were used to confirm and characterized thesynthesizedHv-AuNPs.UVspectroscopyrevealed540nmiswhereHv-

AuNPs'SurfacePlasmonResonance(SPR)peak.ScanningElectronMicroscope(SEM)andTransmissionElectronMicroscope(TEM)showedthatHv-AuNPswere 7–45 nm size ranges with round shapes. With the help of an Xray Diffraction (XRD) spectrum, the crys-talline nature of Hv-AuNPs was found, and FTIR analytical tools were used to find the organic compounds, likephenolsandcarbonylmolecules,thatwereinvolvedinthereductionofHv AuNPs.ThebiosynthesizedHv-

AuNPs' potential to scavenge free radicals was measured texting84t5e DPPH \pm 1.45%), the hydrogen peroxide assay(70.6 \pm 0.8%) and the FRAP assay(90.54 \pm 2.3%). Lung cancer (A549) cells were used to text the

 $anti-cancer effects of Hv-AuNPs through EMT signaling pathway (E-cadherin, Vimentin and SNAIL). The Hv-showed strong cytotoxic activity against lung cancer cells (IC <math display="inline">_{50}=23.68 \mu g/mL)$ and then an oparticles effectively control the cell migration and colony formation at $50 \mu g/mL$. The RT-PCR gene expression analysis confirmed the Hv-AuNP spotentially down regulated the Vimentin expression at $50 \mu g/mL$ and demonstrated

high anti-cancer activity. Therefore, this investigation found that *H. valentiae* synthesized AuNPs have high therapeutic potential for lung cancer and suggests their use in drug development.

1.Introduction

Canceristhemostseriousofhumandiseasescausedb yuncontrolled cellproliferationduetogenemutations.In2020,cancer wasthesecond leading and most common cause of death and killing about 570,000 individuals (Sung et al., 2021;Cui et al., 2019The most commonly diagnosed cancer worldwide is lung cancer. The mortality rate in lung cancerishighcomparedtoothers, estimated around 1.38

milliondeaths
and 10,000 new cases peryear globally. The two majors
ubtypes of lung
cancer (SCLC) and non-small-cell lung cancer

(NSCLC). NSCLC accounts for 85% of all cases of lung cancer, making it a major and common factor in this disease (Landy et al., 2021). The progression of metastases is a precisely regulated multi-step cell bio-

logicalprocessthatinvolvescellmotilityandinvasioni ntotheadjacent extracellular matrix. This process ultimately results in cancer enteringthevascularsystemandcontinuingtospreadth eotherorgans. Epithelial to Mesenchymal Transition (EMT) is the process by which cancer cells change from an immotile epithelial phenotype to a motile mesenchymal phenotype. This makes it easier for epithelial tumors to spreadtootherpartsofthebody(Antonyetal.,201)).E MTis

Abstract

Gold nanoparticles (AuNPs) have a numerous biomedical applications including their antioxidant, antimicrobial, and anticancer applications. We have synthesized AuNPs laced with the extracts of red alga dalymenia pseudofloresii using the greenmethod(Hp-AuNPs).ThesynthesizednanoparticleswerecharacterizedbyUVspectroscopy,XRD,FTIR,andSEM. In UV spectroscopy, Hp AuNP's surface plasmon resonance (SPR) peak was discovered to be at 545 nm, which initially confirmed the formation of nanoparticles. The X-ray diffraction analysis confirmed the biosynthesized Hp-AuNP structures to be crystal in nature. Bioactive molecules, such as phenolic compounds and carboxylic groups, were identified by FTIR analysis as contributing to the reduction of Hp AuNPs. The scanning electron microscope (SEM) analysis was used to identify the Hp-AuNP morphology as cubic and rectangular structures with 27 nm size. The antioxidant activity demon strated that H.pseudofloresii extract (61.3%) and synthesized Hp-AuNPs (71.87%) effectively in hibited the DPPH radicalsat50µg/mLconcentration.TheHp-AuNPsexhibitedefficientantibacterialeffectsagainstStaphylococcusaureus(24mm), Lactobacillus (23 mm), and Pseudomonas aeruginos a (22 mm). The biosynthesized Hp-AuNPs showed potential cytotoxic and the properties of the propertiesactivityagainstA549lungcancer (IC₅₀=19.02μg/mL)thanLN-18glioblastomacancercells (IC₅₀=32.46μg/mL).Hence, further anticancer screening was tested against lung cancer cells. In the clonogenic assay, Hp-AuNPs effectively controlthe lung cancer cell colony formation at the concentration of 30 µg/mL, whereas the Hp-AuNPs induce apoptotic activity in lung cancer cells was confirmed through reactive oxygen species (ROS) generation as say. Therefore, the unique biological confirmed through reactive oxygen species (ROS) generation as say. Abstract

Phytochemical substances in seaweeds have a wide range of pharmacological properties and are involved in a unique eco- friendly technique to produce stable, less harmful metal nanoparticles. The antioxidant-rich phytochemical $seaweed {\it Champia parvula} extract have garnered attention for their potential functions in the prevention of human diseases. \label{eq:champia parvula}$ research explores the phytoconstituent contents of. parvula aqueous extract as well as its ability to synthesize silver nanoparticles, and its antioxidant, antimicrobial, and anticancerproperties are investigated. The seaweed extract was analyzed fortotalphenols(2.02±0.11mg/g),flavonoids(1.72±0.05mg/g),tannins(1.55±mg/g),anthocyanin(0.79±0.21mg/g), $and total chlorophyll (0.7\pm0.04 mg/g) contents. The biosynthe sized \textit{C.parvula}-mediated silver nanoparticles (Cp-AgNPs)$ characterized by various spectroscopic techniques. The surface plasmonic resonance (SPR) band of Cp AgNPs was observedat425nmusingUVspectroscopy.Theface-centeredcubic(FCC)andcrystallinestructurewereidentifiedbyX-ray diffraction (XRD) analysis. Scanning electron microscopy (SEM) confirmed the morphology of Cp-AgNPs as round in shape a confirmed the confirmed the morphology of Cp-AgNPs as round in shape a confirmed the confirmewith79nmsize.ThebiomoleculesinthealgaeextractandCp-AgNPswereidentifiedwiththehelpofFT-IRanalysis,which confirms the presence of phenolic, proteins and amine compounds. Zeta potential analysis proved that the biosynthesized Cp-AgNPs were extremely stable due to the surface charge of nanoparticles (- 35.2 mV). The Cp-AgNPs showed greater freeradicalscavengingabilityduetothepresenceofbioactivemoleculessuchasphenols,flavonoids,tannins,andanthocyanin in algae extract. Cp-AgNPs exhibited the highest antimicrobial activity again Streptococcus mutans , Staphylococcus aureus, and Candidaalbicans at 100 µg/mL. Furthermore, Cp-AgNPs demonstrated anticancer activity against humanlung (A549)cancerandcolon(HT-29)cancercells.Thehalf-maximalinhibitoryforlungcancerwasfoundat21.54µg/mL,and forcolon cancer it wasfoundat 42.36 µg/mL. These findings confirmed that the synthesized Cp-AgNPs have a wide range of pharmacological activities and might be used as target drug carriers.

1.Introduction

Nanotechnologyhassignificantlyimprovedthedetection and treatment of a variety of diseases, including tumors and

Research Institute, Chennai, India

cancer. Targeted drug delivery systems are more effective, and anticancer drugs have fewer adverse effects because of the new features provided by nanoparticles (NPs) (Fatima, Siddiqui, and Kha@021). Biomedical and pharmaceutical

items, efficient renewable energy sources, revolutionary food packaging tactics, better water treatment procedures, and improved processes of industry resource recovery are just some of the intriguing nanotechnology platforms now available (Anjali et al.2021). Nanotechnology is one of the most activeareasofmaterialssciencestudycurrently(Manam and Subbaiah 2020). The synthesis of nanoparticles of uniform size has increased worldwide over the last decade, and their size-based shape is increasingly being employed to address sophisticated technological and environmental issues (Ebrahimzadehetal.2020).Nanoparticles(NPs)have alteredtherapeuticagentdesignsandfunctionsand

enhancedtargeteddrugdeliverysystemsefficacyand reduced the adverse effects of anticancer treatment due totheir special properties (Anjali et al.2021). Optical proper -ties like as surface plasmon resonance (SPR) and fluores- cence have given nanotechnology a new dimension in biomedical applications such as cancer-cell detection and therapy (Manam and Subbaiah2020). Because of their tiny size and great biocompatibility, nanomaterials are useful. Because of this, metallic, inorganic, and organic nanoparticlesarecommonlyemployedinnanotechnology(Phull et al. 2021). Nanomaterials have greater environmental ben- efits and compatibility with outstanding biomedical applications such as antimicrobial, anticancer, immunosuppressive, larvicidal, drug delivery, and biosensor (Zhang et al. 2020).

Ironnanoparticles(Fe₃O₄NP)areparticularlyinteresting

amongtheothertypesofmetalnanoparticlesbecauseof their biocompatibility and demonstrated efficiency in the treatment of iron anemia diseases, cancer using magnetic hyperthermia(MHT),thermo-ablation,bio-separation,bio-

ABSTRACT

This research aimed to investigate the mechanism of glioblastomakilling action of brown seaweed *Spatoglossumasperum* fabricated gold nanoparticles (Sa-AuNPs) as a novel medication. UV spectroscopy revealed the surfaceplasmon resonance peak at 530 nmefortability of bio fabricated Sa-AuNPs. The XRD and SEM analysis af-firmed the Sa-AuNPs were crystalline condition and cubic shapes with 20 nm size. The reducing and cappingagents of organic compounds present in the SaAuNPs were identified by FTIR, **NMM**assin spectroscopicanalysis. In addition, Sa-AuNPs showed excellent antioxidant activity through maximum inhibition of DPPH rad-icals (73.21%) and hydrogen peroxide radicals (68.9%). The biosynthesized Sa-AuNPs showed potent cytotoxicactivity against LN-18 Glioblastoma cells (IC₅₀=13.38 µg/mL). Furthermore, 11 genes involved in glioma can-cer (as protein) and 10 compounds it. tasperum(as Ligand) were picked for molecular docking. The dockingresult showed, among the 10 selected compounds, stigmast5-en-3-ol has an effective binding affinity with 11genes and effectively targeted EGFR, IDH and PTEN. This study concludes that SaAuNPs have potent antioxi-dant and anticancer activity due to the presence of bioactive molecules involved in the nanoparticle's reductionprocess. The research provides strong support for the prospective development of innovative treatments forglioblastoma.

1. Introduction

Cancerisacomplexillnessthatmanifestsitselfinvari ousways,in-

cludinganunusualcellformationwiththeabilitytoexpa ndotherbody parts [1]. Glioblastomas account for the majority of all brain cancers, which are the most aggressive and persistent kind of tumors and their impact is approximately 0.02 percent of the population. It is an infre- quent tumor but considering a major public health concern due to the poorprognosis[2]. The development of glioblastomas is brought on by a convoluted interaction of environmental and genetic variables. Standard treatments for people diagnosed with glioblastomas include chemotherapy and surgical treatment. As a consequence of this treatment, the survival rate for patients with this condition is less than 15 months [3]. Chemotherapy is not an adequate method for combating

this cancer due to chemodrugs 'drugres is tance and negative impacts.

Another significant obstacle is the blood-brain barrier that blocks the drugs to penetrate the target site [4]. Hence, it is essential to discover innovative anti-tumor drugs with high efficacy and less toxicity.

Nanotechnology holds great promise as a therapy for the treatment of cancer, due to its ability to penetrate biological barriers and deliver therapeutic drugs directly. There are several advantages to using nanometal particles in cancer therapy because of their high surface-to-volume ratio, easy fabrication, wide optical characteristics and surface functionalization. Asdrugcarriers, nanoparticles have been extensively

employedtoimprovethemobilityandeffectivenessofv ariousmedici- nal treatments[5]. AuNPs exhibit distinct physical and chemical fea- tures, which are most noticeable in the key segments: gold nanoparti- cles are reasonably stable, safe and simple to make, and they exhibit a variety of unique properties such as nanostructures, quantum size impacts, surface effects, optical transmittance, and electrical effects [6].

CirculatingtumourDNA

ABSTRACT

Cancers continue to be of major concern due to their serious global socioeconomic impact, apart from the continued increase in the incidence of various cancer types. A major challenge that this disease poses is due to the low "early detection" rates which limit the therapeutic outcomes for the affected individuals. Current research has highlighted the discovering biomarkers that help in early cancer detection and the development of tech- nologies for the detection and quantification of such biomarkers. Biomarkers range from proteins to nucleic acids, and can be specific to a particular cancer type. Detection and quantification $of such \ biomarkers \ at \ low \ levels \ from \ biological \ samples \ is \ being \ made \ possible \ by \ the \ advent \ of \ developing$ and by using ionbedicalengineeringtechnologiessuchastumor-on-achipmodels.Here,wepresentbiomarkersthatcanbe helpful for the early detection of breast, colorectal, lung, liver, ovarian, and prostate addition, we discuss the potential of circulating tumor cell DNA (ctDNA) as an early diagnostic marker. Finally, and the content of the conbiosensors available for the detection of cancer biomarkers, which is a recent advancement in this area of research, are discussed.

1. Introduction

Cancer is a complex diseasewith a highfatality rate and increasing incidence rate globally. According to the World Health Organization (WHO), cancer poses a serious threat to human survival. In India in 2019, there were 1762,450 newly diagnosed cases of cancer and 606,880 cancer-related deaths. Every day, 4829 people are diagnosed with cancer, and 1663 people die because of the[1] disease . Effective earlydetectionandtreatmentcansignificantlyreduceth

eincidenceand

mortality of cancer. A few of the complex clinical proced urescurrently used to diagnose tumors include X-rays, magnetic resonance imaging (MRI), computerized tomography (CT), endoscopy, positron emission tomography, thermography, sonography, biopsy, and cytology. Other imaging methods are also used, including positron emission tomography

(PET). Molecular methods include polymerase chain reaction (PCR),

enzyme-linked immunosorbent assay (ELISA), radioimmunoassay (RIA), immunohistochemistry (IHC), and flow cytometry. However, these methods can only identify cancers that are at stages and various are consuming because they require sample processing anddiagnostic malignancy. Biosensors and canceron-a-chip have been identified as new research topics. The electrochemical indicator was used to detect the hybridization process once it hybridized with the target ssDNA sequence. The synergistic effect increased the amount of ssDNA adsorbed on the electrode surface, enhancing the electrochemical responses. Abiosensorisabio-analytical instrument that uses time-consuming and immediate screening to identify cancer in its early stages [2,3].

2. Earlydetectionofcancersbasedonbiomarkers

Biomarkers are biological molecules that can be found in the fluids or

FORM NO. 1/10C /002. Rev. 00 Date 20.03.2020

To

The General Manager (FIR) TVS Training Services +

RECREESE FOR 04/06 WEEKS INDUSTRIAL TRAINING OF ALTECH/4 YEARS Degree Programme, 4th/ Subject: G* SEMESTER, STUDENTS DURING March 2023 to April 2023. Dear Sir.

Our Students are interested to undergo intereship training in your esteemed Organization.

In view of the above, I request your good self to allow our following 60 students for practical training in your estocmed organization. Kindly accord your permission and give at least one-week time for students to join training ofter confirmation.

If vacancies exist, kindly do plan for Campus/Off Campus Interview for 2024batch passing out students in above branches.

A line of confirmation will be highly appreciated

regards, Your sincerety,

est Officer / HPC Coordin

V.Vijayaraghunathan

#Days	Duration	Topics Cover
D-1	FN:2Hr AN:2Hr	History of Python, Need of Python Programming, Applications Basics of Python Programming Using the REPL(Shell), Running Python Scripts, Variables, Assignment, Keywords, Input-Output, Indentation.
D-2	FN:2Hr AN:2Hr	Types - Integers, Strings, Booleans; Operators- Arithmetic Operators, Comparison (Relational) Operators, Assignment Operators, Logical Operators, Bitwise Operators, Membership Operators, Identity Operators, Expressions and order of evaluations Control Flow- if, if-elif-else, for, while, break, continue, pass.
D-3	FN:2Hr AN:2Hr	Defining Functions, Calling Functions, Passing Arguments, Keyword Arguments, Default Arguments, Variable-length arguments, Anonymous Functions, Fruitful Functions (Function Returning Values), Scope of the Variables in a Function - Global and Local Variables.
D-4	FN:3Hr AN:3Hr	Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.
D-5	FN:2Hr AN:2Hr	Classes, 'self-variable', Methods, Constructor Method, Inheritance, Overriding Methods, Data hiding In after Noon, there will be doubt session and feedback.

Note: If there is any inconvenience, please do not hesitate to contact us.

Dr. M.G.R. EDUCATIONAL AND RESEARCH INSTITUTE DEEMED TO BE UNIVERSITY

University with Graded Autonomy Status

Periyar E.V.R. High Road, Maduravoyal, Chennai-95, Tamilnadu, India.

Industry Institute Planning Cell in Association with

INDIAN INSTITUTE OF INDUSTRY INTERACTION EDUCATION AND RESEARCH

5 Days Training Program on 3D Modelling in CATIA

Topics Covered

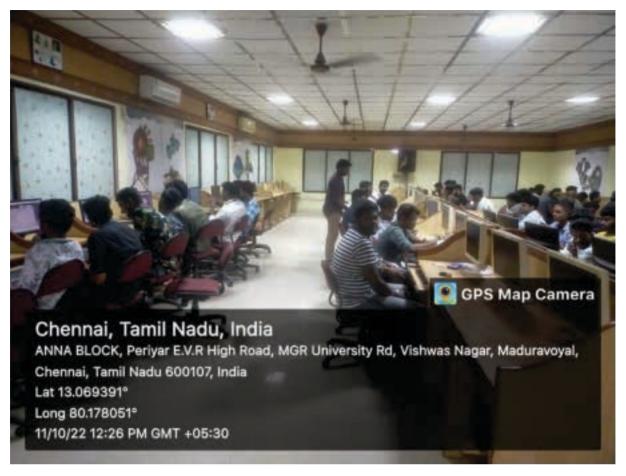

- >>> Introduction to CATIA & Screen Settings
- >>> Basic of Sketcher
- >>> Sketcher Workbench
- >>> 3D Modelling
- >> Advance Options

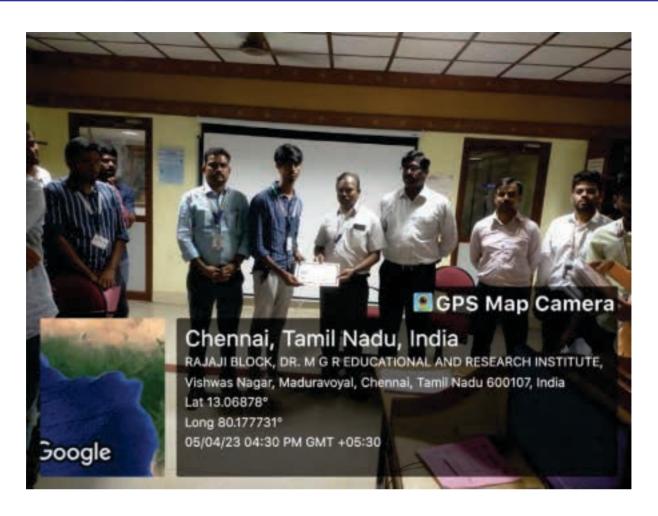

Beneficiary Department: Mechanical

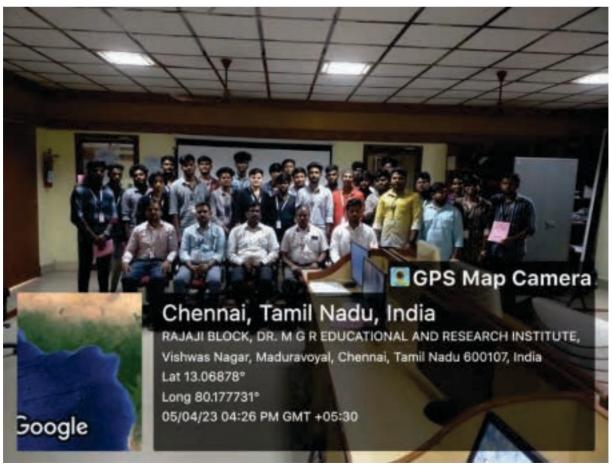

Date: 07/10/2022 TO 12/10/2022 VENUE: MAIN CAMPUS Timing: 9:30 AM to 4:00PM MECHANICAL DEPARTMENT

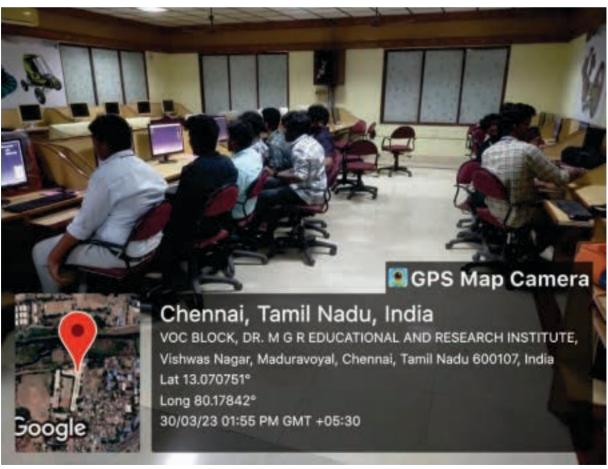

Industry Institute Planning Cell

ASSOCIATION WITH BOSCH-CERTIFICATION CENTRE

5 Days hands on Training Program at

BOSCH TRAINING CENTRE

Topics Covered

- >> Course On Vehicle Diagnostics
- >> Course On Automotive electrical (Starter, Generators & Battery)
- >> Course On Automotive Battery

>> Course On Air Conditiong System and Functions

Benefiting Departments Mech & Auto

Date: 19-09-2022 to 23-09-2022 | Time: 9.30 AM to 4.00 PM

Venue:

Dr. MGR-Bosch Joint Certification centre (Opp to Phase II) Adayalampat

Dated: 16.06.2023, the INDUSTRY INSTITUTE PLANNING CELL

in Association with CADD Centre * had organised *3D Modelling in CATIA Level 3 Hands On Training Workshop on the Following Topics such as from Surface Modeling & Introduction to Kinematics & Multiple Joints & Mechanisms 16th June to 23rd June 2023 (6 days) @ CADD LAB . Nearly 20 Students from the Department of Mechanical Engineering were actively participated at Workshop.

We thank Our Honorable President Sir for giving us this opportunity. We also thank HOD and Placement Co-ordinator of mechanical department for rendering their support for making this training program a great success.

*Dr. C. Balakrishnan
