

Workshop on Video Editing

Department of Visual Communication & Animation

The less the camera is able to capture what you're seeing in a scene, the more editing it needs.

Objectives

The aim of this workshop is to introduce students to the techniques of video editing, in an educational context, using freely available tools and media. After completing this workshop, they should be able to:

1. Select video editing software and related tools from the Internet
2. Understand the fundamental concepts of digital video
3. Know how to perform video editing on a basic level
4. Be aware of copyright issues and laws

So we the department of Visual Communication and Animation organized a workshop on the “Video Editing” to discover what we really want to say to the mass audience.

Pertaining to this we invited the Guest speaker Mr.Biju.V.Donbosco, renowned Film Editor on 24/04/2023. Around 100 students of first years participated in this seminar enthusiastically.

Outcomes

The film and broadcasting industries can be extremely competitive, which is why it's vital for our students to effectively showcase their strengths and skills throughout the hiring process. By developing their video editing skills, we can position them as a valuable asset and a qualified candidate. So this workshop explained them what exactly video editing skills are, described how they could improve them and provided tips for showcasing them on their resume, during an interview and in the workplace.
