Department Vision

To achieve the pinnacle of success in the area of sustainable constructions and green technologies, thus stimulating economic growth and making the society a better place to live in

Department Mission

The mission of the Department of Civil Engineering is:

M1: To produce graduates who possess technical competence in their chosen specialty area ofCivil Engineering with integrity and commitment

M2: To prepare them to serve and contribute as innovators, professional engineers, and leadersin the global community

Program Educational Objectives

The Program Educational Objectives of the Civil Engineering program are designed to produce skilled Engineers who could effectively contribute to the Civil Engineering profession with an ability to meet its current andfuture challenges

PEO 1: To apply fundamental technical knowledge and skills to find creative solutions to technological challenges and problems in various areas of basic sciences and engineering.

PEO 2: To analyze, design and use skills in order to formulate and solve Civil Engineering problems.

PEO 3: To practice civil engineering in a responsible, professional and ethical manner and implement eco- friendly sustainable technologies for the benefit of industry and society.

PEO 4: To create knowledge through research and development in Civil Engineering and allied fields and modernize the teaching levels.

PEO 5: To make students professionally competent by enhancing their communication skills, team spirit, leadership and also to prepare them for lifelong learning through innovative and research activities.

PO1	Apply the knowledge of science, mathematics, and engineering principles for developing problem solving attitude.
PO2	Problem analysis: Identify, formulate and solve engineering problems in the domain of Structural Engineering field.
PO3	Use different software tools for Analysis and Design structural engineering domain.
PO4	Design and conduct experiments, analyse and interpret data, for development of simulation experiments.
PO5	Function as a member of a multidisciplinary team with sense of ethics, integrity and social Responsibility.
PO6	Functioning as a team in an ethical manner emphasizing on solving environmental, social and global challenges
PO7	Shaping managerial skills to become good decision makers, strategists and entrepreneurs
PO8	Apply reasoning informed by the contextual knowledge to access societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice
PO9	Demonstrate knowledge and understanding of the engineering and management principles and apply these to once own work as a member and leader in a team to manage projects and multidisciplinary environments

LIST OF PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO 1: The ability to develop new materials, design and research projects in differentfieldsofcivilengineeringusingsoftwareandexperimentaltechniques.

PSO 2: Ability to develop the teaching professionals and engage in R&D works with ethical andsocietalresponsibility.

PSO3: Ability to apply the knowledge in various structural engineering fields.

SEMESTER-I

Course Code : EMMA22005	Course Name : ADVANCED ENGINEERING MATHEMATICS FOR STRUCTURAL ENGINEERS	Ty/ Lb/ ETL	L	T/ S.Lr	P/R	C
	Prerequisite: UG level Mathematics	TY	3	1	0	4

L : Lecture T : Tutorial   S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

The student should be made to:
- To provide the Concept of Tranformations.
- To teach one and two dimensional variables.
- To enable the knowledge of Estimation Theory.

COURSE OUTCOMES (COs) :

CO1	To understand the Transform methods
CO2	To be able to solve Calculus of variation
CO3	To understand the concepts of One dimensional methods
CO4	To be able to solve the concepts of Two dimensional methods
CO5	To analyze the Estimation Theory

Mapping of Course Outcomes with Program Outcomes (POs)

UNIT I   TRANSFORM METHODS   12 hrs

Laplace Transform methods for one dimensional wave equation – Displacements in a string – Fourier Transform methods – One dimensional heat conduction problems in infinite and semi- infinite rod.

UNIT II   CALCULUS OF VARIATIONS   12 hrs

Variation and its properties – Euler's equations – Functionals dependent on First and higher order derivatives – Functionals depend on functions of several independent variables – Problems with moving boundaries – Direct methods – Ritz and Kantorovich methods.

UNIT III   ONE DIMENSIONAL RANDOM VARIABLES   12 hrs

Random variables – Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Exponential, and normal distributions – Functions of a Random variable.

UNIT IV   TWO DIMENSIONAL RANDOM VARIABLES   12 hrs

Joint distributions – Marginal and conditional distributions – Functions of two dimensional random variables – Correlation – Regression.

UNIT V   ESTIMATION THEORY   12 hrs

Unbiased estimators – Method of moments –Maximum likelihood estimation – Curve fitting by Principle of least squares.

Total no. of hrs: 60

Course Code : **EMSE22001**	Course Name : **Theory of Elasticity and Plasticity**		Ty/Lb /ETL	L	T/ SLr	P/R	C
	Prerequisite :Mechanics of Solids /Strength of materials		Ty	3	1/0	0/0	4

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: Credits
T/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES : To understand the concept of 3D stress, strain analysis and its Applications to simple problems

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To remembering the basics knowledge about the Elasticity and Plasticity
CO2	To understand the concept of stress, strain of 2D and 3D for Elastic and plastic structures
CO3	To applying the concept of of elasticity and equip them with the knowledge toindependently handle the problems of elasticity
CO4	To analyze the stress and strain for Elasticity and Plasticity
CO5	To inculcate the habit of researching and practicing in the field of elasticity and Plasticity

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab						

UNIT I: BASIC CONCEPTS　　　　　　　　　　　　　　　　　　　　　12 Hrs

Analysis of stress and strain - Equations of equilibrium and compatibility -Stress strain relationship - Generalized Hook's law

UNIT II: PLANE STRESS AND PLANE STRAIN 2D PROBLEMS　　　　12 Hrs

Plane stress and plane strain -2D Problems in Cartesian coordinates- Airy's stress function - Problemsin 2D - Polar coordinate

UNIT III: TORSION　　　　　　　　　　　　　　　　　　　　　　　12 Hrs

Torsion of non-circular section - methods of analysis, St. Venant's theory - Torsion of elliptical sections Torsion of triangular sections - Prandtl's membrane analogy - Torsion of rolled profiles – torsion of thin rectangular section and hollow thin walled sections.

UNIT IV: ENERGY METHODS　　　　　　　　　　　　　　　　　　12 **Hrs**

Energy methods - principle of virtual work - energy theorem - Rayleigh Ritz methods - Finite Difference method.

UNIT V: INTRODUCTION TO PROBLEMS IN PLASTICITY　　　　　12 Hrs

Physical assumption - criteria of yielding, yield surface, Flow rule (plastic stress strain relationship). Elastic plastic problems of beams in bending - plastic torsion.

Total No of Hours: 60

Course Code: EMCC22001	Course Name : **Research Methodology and IPR**		Ty/Lb/ ETL	L	T/SLr	P/R	C
	Prerequisite: core subjects		Ty	3	0/0	0/0	3

Ty/Lb/ : Theory/Lab L : Lecture T : Tutorial   P : Practical/Project R : Research C: Credits T/L Theory/Lab

OBJECTIVE: The goal is to emphasize the importance of innovation and creativity by understanding the research concepts and ethics which will aid to build the nation IPR status.

COURSE OUTCOMES (COs) : By doing this course students will

CO1	Understand research problem formulation by Analyzing research related information and its execution by following research ethics
CO2	Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
CO3	Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.
CO4	Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

**L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: Credits
T/L/ETL : Theory / Lab / Embedded Theory and Lab**

UNIT 1:SELECTION, ANALYSIS AND STATEMENT OF THE RESEARCH PROBLEM;   **9 hrs**

 Literature Review and Formulation of Objectives – using the following Critical thinking Skills – Drawing a Concept map, Oral Communication, Debating, Questioning, Collaborating, Evaluation and Reasoning.

UNIT 2 :RESEARCH DESIGN   **9 hrs**

 Types of Study, Types of Data, Measures of Variablility, Setting up the Hypotheses, data collection techniques and tools, sampling, Describing data – Charts and graphs ; Data processing – Categorization, coding, summarization.

UNIT 3: DATA ANALYSIS AND REPORT WRITING: **9 hrs**

Statistical measures, Regression and correlation, significance test; Report writing – Purpose, format, content, editing and evaluation. Using Citation tools; Report for specific purposes – Theses, Journals, Grant application. Oral presentation to an audience; use of project management digital tools and plagiarism checking.

UNIT 4 :INTRODUCTION TO INTELLECTUAL PROPERTY   **9 hrs**

Types of intellectual property rights – Patent, Copyright, Trade Mark, Industrial Design, Geographical Indication, Trade Secrets - Traditional Knowledge. Elements of Patentability - Novelty, Non Obviousness (Inventive Steps), Industrial Application – Non patentable inventions – Process of patenting – National and International – Form and Fees for IP India

UNIT 5:PRIOR ART SEARCH, PATENT DRAFTING   **9 hrs**

Drafting patent Claims – Types of claims - Registration Procedure, Rights and Duties of Patentee; Patent infringement; Licensing – Franchising - Joint ventures; Non-Disclosure Agreements (NDAs) - Material Transfer Agreements (MTAs).

                                                                Total No of Hours : 45

SEMESTER-II

Dr. M.G.R.
EDUCATIONAL AND RESEARCH INSTITUTE
DEEMED TO BE UNIVERSITY
University with Graded Autonomy Status
(An ISO 21001 : 2018 Certified Institution)
Periyar E.V.R. High Road, Maduravoyal, Chennai-95. Tamilnadu, India.

Course Code : : **EMSE22002**	Course Name : **FEM IN STRUCTURAL ENGINEERING**	Ty/Lb/ ETL	L	T/ SLr	P/R	C
	Prerequisite: Knowledge of Mathematics and Mechanics of Solids	Ty	3	1/0	0/0	4

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: Credits
T/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES: To study the energy principles, finite element concept. Stress analysis, meshing. Nonlinearproblems and applications.

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To introduce various basic concept of Fem
CO2	To develop one, two and three dimensional element properties
CO3	To Solve continuum problems using finite element analysis
CO4	To apply the finite Elements methods in Liner and Non- Liner Problems
CO5	To apply the finite Elements methods in various Software

UNIT I : INTRODUCTION   12Hrs

Boundary Value Problem - Approximate Solution - Variation and Weighted Residual Methods - Ritz and Gale kin Formulations - Concepts of Approximation and Finite Elements - Displacement and Shape Functions - Weak Formulation - Minimum Potential Energy - Generation of Stiffness Matrix and Load Vector.

UNIT II : STRESS ANALYSIS   12 Hrs

Two Dimensional problems - Plane Stress, Plain Strain and Axi symmetric Problems - Triangular and Quadrilateral Elements - Natural Coordinates - Isoperimetric Formulation - Numerical Integration - Plate Bending and Shell Elements - Brick Elements - Elements for Fracture Analysis.

UNIT III: MESHING AND SOLUTION PROBLEMS   12 Hrs

Higher Order Elements - p and h Methods of refinement - IIL conditioned Elements - Discrimination Errors - Auto and Adaptive Mesh Generation Techniques - Error Evaluation.

UNIT IV : NONLINEAR AND VIBRATION PROBLEMS   12 Hrs

Material and Geometric No linearity - Methods of Treatment - Consistent System Matrices – Dynamic Condensation - Eigen Value Extraction.

UNIT V   THERMAL ANALYSIS   12 Hrs

Application to Thermal analysis Problem

                                                          Total No of Hours: 60

OBJECTIVES: This course provides a thorough knowledge of material selection through the material testing based on specification.

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	Ability to design the concrete structures and performance of concrete
CO2	Get the knowledge about the Self Compacting concrete, minerals and chemical admixtures
CO3	Specification of Concrete Material testing
CO4	To design the building frames using software tools
CO5	Apply seismic analysis concepts to structures using Etabs

LIST OF EXPERIMENTS

1. Mix design of concrete as per IS, ACI & BS methods for high performance concrete.

2. Flow Characteristics of Self Compacting concrete.

3. Effect of minerals and chemical admixtures in concrete at fresh and hardened state with relevance to workability, strength and durability.

4. Permeability of Concrete.

a. Rapid chloride Penetration Test,

      a. Freeze and Thaw test,

      b. Acid test

      c. Alkali aggregate reaction test

      d. VCC testing for fire resistance

      e. Autoclaving

OBJECTIVES: To study the energy principles, finite element concept. Stress analysis, meshing. Nonlinear problems and applications.

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To remembering the principles of structural dynamics theories
CO2	To understand the fundamental knowledge of the Structural dynamics
CO3	To applying the new concept of structural dynamics
CO4	To analyze the study dynamic response of single and Multi-degree of freedom system using fundamental theory and equation of motion.
CO5	To prepare them for designing the structures for wind, earthquake and other dynamic load

UNIT I : INTRODUCTION   9 Hrs

Foundational objective of structural dynamic analysis - D Alembert's principle - Rayleigh-Ritz method - Energy methods - Types of prescribed loadings - Basic structural concepts – ductility – Hysteresis - Rigid body dynamics - Vectorial representation

UNIT II: BASIC PRINCIPLES OF MOTION   9 Hrs

Simple harmonic motion - Fourier transformations - Damping properties - Mass properties, Free and forced vibrations.

UNIT III: SINGLE DEGREE FREEDOM SYSTEMS   9 Hrs

Dynamic response to time dependent transient and steady state - Forcing functions - Damped & un-damped response - Damping: vibration isolation, Response of time domain & Frequency domain.

UNIT IV: MULTI DEGREE FREEDOM SYSTEMS   9 Hrs

Two degrees of freedom systems - Orthogonal properties - Rayleigh's method, Stodola - Vianolla Method - Method of matrix iterations - Lumped mass matrix, Multi degree freedom system - Determination of frequency and modes - Transfer matrix response determination.

UNIT V: DYNAMIC ANALYSIS OF SYSTEMS WITH DISTRIBUTED PROPERTIES   9 Hrs

Flexural vibration of uniform beams - Numerical Evaluation of Dynamic Response - Central Difference Method - New Mark method - Earthquake response of linearly elastic buildings and linearly inelastic buildings - Dynamics of base isolated buildings.

Total No of Hours: 45

UNIT I: FORCES AND STRAIN MEASUREMENT   9 Hrs

Choice of Experimental stress analysis methods, Errors in measurements - Strain gauge, principle, types, performance and uses. Photo elasticity - principle and applications - Hydraulic jacks and pressure gauges - Electronic load cells - Proving Rings - Calibration of Testing Machines - Longterm monitoring – vibrating wire sensors - Fibre optic sensors.

UNIT II: MEASUREMENT OF VIBRATION AND WIND FLOW   9 Hrs

Characteristics of Structural Vibrations – Linear Variable Differential Transformer (LVDT) – Transducers for velocity and acceleration measurements. Vibration meter – Seismographs – Vibration Analyzer – Display and recording of signals – Cathode Ray Oscilloscope – XY Plotter – wind tunnels – Flow meters – Venturimeter – Digital data Acquisition systems**.**

UNIT III : DISTRESS MEASUREMENTS   AND CONTROL   9Hrs

Diagnosis of distress in structures – Crack observation and measurements – corrosion of reinforcement in concrete – Half cell, construction and use – damage assessment – controlled blasting for demolition – Techniques for residual stress measurements – Structural Health Monitoring.

UNIT IV: NON-DESTRUCTIVE TESTING METHODS   9 Hrs.

Load testing on structures, buildings, bridges and towers – Rebound Hammer – acoustic emission – ultrasonic testing principles and application – Holography – use of laser for structural testing – Brittle coating, Advanced NDT methods – Ultrasonic pulse echo, Impact echo, impulse radar techniques, GECOR , Ground penetrating radar (GPR).

UNIT IV: MODEL ANALYSIS   9 Hrs.

Laws – Laws of similitude – Model materials – Necessity for Model analysis – Advantages – Applications – Types of similitude – Scale effect in models – Indirect model study – Direct model tudy - Limitations of models – investigations – structural problems – Usage of influence lines in model studies.

Course Code : : EMSE22I01	Course Name : **TERM PAPER**		**Ty/Lb/ ETL**	**L**	**T/ SLr**	**P/R**	**C**
	Prerequisite: Nil		**IE**	**0**	**0/0**	**4/0**	**2**
L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab							

A term paper is an elaborate research-based work on a particular topic in the domain of study. The student must choose a topic of his interest from the domain of study for a term paper. The term paper can be an original research article or review article. In case of review article, the student must refer atleast 50 research/review articles and critically review other researcher's work. The term paper may be 10 -20 pages in length. The general guidelines for writing the term paper as follows:

1. Abstract

2. Introduction to explain about the broad and general statement on the topic chosen.

3. Aim /Objective of the term paper.

4. Description of methodology, concepts and arguments.

5. Identify the research gap and suggest possible future works.

6. Conclusion

Three reviews will be conducted to monitor the progress of the work.At the end of the semester, presentation must be made by the student and Viva-Voce examination will be conducted by the internal Examiner duly Appointed by the Head of the department and the students will be evaluated.

SEMESTER-V

Course Code : : EMSE22005	Course Name: ADVANCED CONCRETE TECHNOLOGY		Ty/Lb/ ETL	L	T/S.Lr	P/R	C
	Prerequisite: UG level Concrete Technology		Ty	3	1/0	0/0	4

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVE: Tostudythepropertiesof materials,testsandmixdesignforconcrete.

COURSEOUTCOMES(COs) : (3-5)

CO1	To interpret proprieties cement,aggregate sand other admixturesusedinconcrete
CO2	Toassessthepropertiesoffreshandhardenedconcrete

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

UNIT I: CONCRETE INGREDIENTS   12 Hrs

Composition of OPC – Manufacture – Modified Portland Cements – Hydration Process of Portland Cements – Structure of Hydrated Cement Pastes Mineral Admixtures – Slags – Pozzolanas and Fillers – Chemical Admixtures – Solutes – Retarders – Air Entraining Agents – Water Proofing Compounds – Plasticizers and Super Plasticizers Shape and Mechanical Properties – Absorption and Physical Durability – Chemical Stability – Packing Characteristics

UNIT II: FRESH CONCRETE   12 Hrs

Workability – Mix Proportioning – Mixes incorporating Fly-ash, Silica fume, GGBS – Mixes for High Performance Concrete – Mix Design methods – variations in concrete strength**.**

UNIT III: HARDENED CONCRETE   12 Hrs

Interfacial Transition Zone – Fracture Strength – Mechanical Properties – High Strength Concrete – Shrinkage – Creep – Other Properties

UNIT IV: DURABILITY OF CONCRETE   12 Hrs

Basic Consideration – Stability of Constituents – Chemical Attack – Corrosion of Reinforcing Steel

UNIT V : SPECIAL CONCRETES   12 Hrs

Manipulation of Strength of Concrete – Fibre Reinforced Concrete – Self Compacting Concrete – Polymer Concrete – Super Plasticized Concrete.

Total No. of Hours: 60

OBJECTIVE

The student shall be capable of identifying a problem related to the program of study and carry out wholesome research on it leading to findings which will facilitate development of a new/improved product, process for the benefit of the society.

 M.Tech projects should be socially relevant and research oriented ones. Each student is expected to do an individual project. The project work is carried out in two phases – Phase I in III semester and Phase II in IV semester. Phase II of the project work shall be in continuation of Phase I only. At the completion of a project the student will submit a project report, which will be evaluated (end semester assessment) by duly appointed examiner(s). This evaluation will be based on the project report and a viva voce examination on the project. Student will be allowed to appear in the final viva voce examination only if he / she has submitted his / her project work in the form of paper for presentation / publication in a conference / journal and produced the proof of acknowledgement of receipt of paper from the organizers / publishers.

L : Lecture T : Tutorial   SLr : Supervised Learning P : Project R : Research C: Credits
T/L/ETL : Theory/Lab/EmbeddedTheory and Lab

OBJECTIVES: Study the behaviour and design of shells, design of plates.

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	Ability to learn about behaviour and analysis of thin plates
CO2	Understand Isotropic and orthotropic plates, bending and twisting of plates; Numerical solutions.
CO3	Study the behaviour and design of shells, design of plates
CO4	To Analyze the Various Problems using different theories based on plate and shells
CO5	Toapply a new knowledge related with different theories based on plate and shells

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

UNIT I: BENDING OF RECTANGULAR PLATES   9 Hrs

Introduction to plate theory - Small deflection of laterally loaded thin rectangular plates for pure bending. Navier's and Levy's solution for various lateral loading and boundary conditions (No derivation) - Numerical examples.

UNIT II : BENDING OF CIRCULAR PLATES   9 Hrs

Energy methods for rectangular and circular plates with clamped edges subjected to symmetric loadings.

UNIT III : CLASSIFICATION OF SHELLS   9 Hrs

Introduction to curved surfaces and classification of shells - Membrane theory of spherical shells - cylindrical shells - hyperbolic paraboloids - elliptic paraboloid and conoids.

UNIT IV : MEMBRANE THEORY   9 Hrs

Axially symmetric bending of shells of revolution - Closed cylindrical shells - water tanks, sphericalshells and Geckler's approximation - Bending theory of doubly curved shallow shells.

UNIT V : FLEXURE THEORY   9 Hrs

Design and detailing of folded plates with numerical examples Design and Detailing of simple shellproblems – spherical domes, water tanks, barrel vaults and hyperbolic paraboloid roofs

Total No of Hours: 45

	Prerequisite : Concrete Technology/ Composite Materials	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES : To understand various construction procedures from sub structure to super structure and also the equipment needed for construction of various types of structures from foundation to super structure

COURSE OUTCOMES (Cos) : (3 – 5)

At the end of the course, students will be able to

CO1	Formulate constitutive behaviour of composite materials – Ferrocement, SIFCON and Fibre Reinforced Concrete by understanding their strain- stress behaviour
CO2	Classify the materials as per orthotropic and anisotropic behaviour.
CO3	Estimate strain constants using theories applicable to composite materials.
CO4	Analyse and design structural elements made of cement composites.
CO5	To create e new idea about cement concrete in the construction field.

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

UNIT I – INTRODUCTION   9 Hrs

Classification and Characteristics of Composite Materials- Basic Terminology, Advantages. Stress-Strain Relations- Orthotropic and Anisotropic Materials, Engineering Constants for Orthotropic Materials, Restrictions on Elastic Constants, Plane Stress Problem, Biaxial Strength, Theories for an Orthotropic Lamina.

UNIT II - MECHANICAL BEHAVIOUR   9 Hrs

Mechanics of Materials Approach to Stiffness - Determination of Relations between Elastic Constants, Elasticity Approach to Stiffness- Bounding Techniques of Elasticity, Exact Solutions - Elasticity Solutions with Continuity, Halpin, Tsai Equations, Comparison of approaches to Stiffness.

UNIT III - CEMENT COMPOSITES   9 Hrs

Types of Cement Composites, Terminology, Constituent Materials andtheir Properties, Construction Techniques for Fibre Reinforced Concrete - Ferrocement, SIFCON, Polymer Concretes, Preparation of Reinforcement, Casting and Curing.

UNIT IV - MECHANICAL PROPERTIES OF CEMENT COMPOSITES   9 Hrs

Behavior of Ferrocement, Fiber Reinforced Concrete in Tension, Compression, Flexure, Shear, Fatigue and Impact, Durability and Corrosion.

UNIT V - APPLICATION OF CEMENT COMPOSITES   9 Hrs

FRC and Ferrocement- Housing, Water Storage, Boats and Miscellaneous Structures. CompositeMaterials- Orthotropic and Anisotropic behaviour, Constitutive relationship, Elastic Constants.

Total No of Hours: 45 Hrs

OBJECTIVES : To study the concept of buckling and analysis of structural elements

COURSE OUTCOMES (Cos) : (3 – 5)
At the end of the course, students will be able to

CO1	To learn the classical methods of structural analysis in columns
CO2	To understand the method of solving in beams,columns and frames and plates
CO3	To apply the concept of virtual work to find the deflection beams,columns and frames and plates
CO4	To analyze the structures by calculating forces and displacements in structures due to given loads and imposed deformations
CO5	To evaluate the bending moment using slope deflection, moment distribution and approximate methods

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: Credits T/L/ETL : Theory / Lab / Embedded Theory and Lab

UNIT I: BUCKLING OF COLUMNS   9 Hrs

Concept of stability approaches to stability analysis - characteristics of stability problems - Columns - Buckling of columns with various end conditions, imperfect columns - Elastically supported columns - non-prismatic columns - Built-up columns - Inelastic buckling - Experimental study of column behaviour - Empirical column formulae - Buckling of bars on elastic foundations - Large deflection of buckled bars.

UNIT II: BUCKLING OF BEAM-COLUMNS AND FRAMES   9 Hrs

Beam-column theory - Application to buckling of frames.

UNIT III: TORSIONAL AND LATERAL BUCKLING   9 Hrs

Combined tensional and flexural buckling - Lateral Buckling - Lateral buckling of beams - pure bending of simply supported beam and cantilever - numerical solutions.

UNIT IV: BUCKLING OF PLATES   9 Hrs

Buckling of thin plates - various edge conditions, inelastic buckling - post buckling strength.

UNIT V: APPROXIMATE METHODS   9 Hrs

Energy methods - Iterative procedure and Finite element formulation.

Total No of Hours: 45

Course Code : **EMSE22E05**	Course Name : **REPAIR AND REHABILITATION OF STRUCTURES**	Ty/Lb/ ETL	L	T / S.Lr	P/ R	C
	Prerequisite: Basic Level Repair and Rehabilitation of Structures	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES :

COURSE OUTCOMES (Cos) : (3 – 5)
At the end of the course, students will be able to

CO1	Ability to learn about the health of structure using static field methods and dynamic field tests
CO2	Diagnosis the distress in the structure understanding the causes and factors.
CO3	Students to know about repairs and rehabilitation measures of the structure
CO4	Ability to investigation structural related problems
CO5	Suggest repairs and rehabilitation measures of the structure

Mapping of Course Outcomes with Program Outcomes (POs)

UNIT I MAINTENANCE AND REPAIR STRATEGIES　　　　　　　　9 Hrs

Maintenance, Repair and Rehabilitation, Facets of Maintenance, importance of Maintenance, Various aspects of Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration**.**

UNIT II SERVICEABILITY AND DURABILITY OF CONCRETE　　　　9 Hrs

Quality assurance for concrete – Strength, Durability and Thermal properties, of concrete Cracks, different types, causes – Effects due to climate, temperature, Sustained elevated temperature, Corrosion - Effects of cover thickness and cracking.

UNIT III MATERIALS FOR REPAIR　　　　　　　　　　　　　9 Hrs

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fibre reinforced concrete.

UNIT IV TECHNIQUES FOR REPAIR AND PROTECTION METHODS　　9 Hrs

Rust eliminators and polymers coating for rebars during repair, foamed concrete, mortar and dry pack, vacuum concrete, Gunite and Shotcrete, Expoxy injection, Mortar repair for cracks, shoring and underpinning. Methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings and cathodic protection. Engineered demolition techniques for dilapidated structures – case studies

UNIT V REPAIR, REHABILITATION AND RETROFITTING OF STRUCTURES　　9 Hrs

Repairs to overcome low member strength.　　Deflection, Cracking, Chemical disruption, weathering corrosion, wear, fire, leakage and marine exposure.

Total No of Hours: 45

UNIT I: STRUCTURAL HEALTH   9 Hrs

Factors affecting Health of Structures - Causes of Distress - Regular Maintenance.

UNIT II: STRUCTURAL HEALTH MONITORING   9 Hrs

Concepts - Various Measures -Structural Safety in Alteration - Structural Audit - Assessment of Health of Structure - Collapse and Investigation - Investigation Management - SHM Procedures.

UNIT III   TESTING   9 Hrs

Testing: Static Field Testing – Dynamic field testing - Stress history data - Dynamic load allowance tests - Ambient vibration tests - Forced Vibration Method - Dynamic response methods.

UNIT VI   DYNAMIC FIELD TESTING   9 Hrs
Types of Dynamic Field Test- Stress History Data- Dynamic Response Methods- Hardware for Remote Data Acquisition Systems- Remote Structural Health Monitoring.

UNIT V   INTRODUCTION TO REPAIRS AND REHABILITATIONS OF STRUCTURES   9 Hrs
Case Studies (Site Visits), piezo–electric materials and other smart materials, electro–mechanical impedance (EMI) technique, adaptations of EMI technique.

Course Code : **EMSE22E07**	Course Name: **STRUCTURAL OPTIMIZATION**		Ty/Lb/ ETL	L	T / S.Lr	P/ R	C
	Prerequisite : Need to study Linear and Nonlinear Structures		Ty	3	0/0	0/0	3

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES : To The objective of this course is to make students to learn principles of optimization,

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	Understand Structural optimization based on Optimal criteria.
CO2	Computation of derivatives of response quantities with respect to design variables.
CO3	Non-linear programming by different methods.
CO4	To implement the optimization Concepts for the structural engineering problems.
CO5	To evaluate different methods of optimization.

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab						

UNIT I   INTRODUCTION   9 Hrs

Introduction to optimization - engineering applications of optimization - Formulation of structural optimization problems as programming problems - Optimization Techniques- Classical optimization techniques- single variable optimization- multivariable optimization with no constraints- unconstrained minimization techniques and algorithms constrained optimization solutions by penalty function techniques- Lagrange multipliers techniques and feasibility techniques.

UNIT II   LINEAR PROGRAMMING   9 Hrs

Standard form of linear programming, geometry of linear programming problems-solution of a system of linear simultaneous equations- pivotal production of general systems of equations- simplex algorithms- revised simpler methods- duality in linear programming.

UNIT III NON-LINEAR PROGRAMMING   9 Hrs

One dimensional minimization methods- elimination methods-Fibonacci method- golden section method- interpolation methods- quadratic and cubic methods-Unconstrained optimization methods-direct search methods-random search methods- descent methods

UNIT IV CONSTRAINED OPTIMIZATION TECHNIQUES   9 Hrs

Direct methods- the complex methods- cutting plane method-exterior penalty function methods for structural engineering problems- Formulation and solution of structural optimization problems by different techniques.

UNIT V   GEOMETRIC AND DYNAMIC PROGRAMMING   9 Hrs

Geometric programming, conversion of NLP as a sequence of LP/ geometric programming- Dynamic programming conversion of NLP as a sequence of LP/ Dynamic programming

Total No of Hours : 45

OBJECTIVES : To Study the design principles, analysis and design of elements

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To learn the basic principle of fabricated structures
CO2	To Understand the concept of Structural prefabricated elements
CO3	To know abnormal loads which are hazardous to prefabricated structures
CO4	To analyze the Structural elements
CO5	To familiarize with joining techniques used for prefabrication

UNIT I: INTRODUCTION   9 Hrs

Concept of planning and layout of prefabricated plant. IS Code specification. Modular co-ordination,

standardization, production, transportation, erection, stages of loading and coal provisions, safety factors, material properties, Deflection control, Lateral load resistance, Location and types of shear walls.

UNIT II: REINFORCED CONCRETE   9 Hrs

Prefabricated structures - Long wall and cross-wall large panel buildings, one way and two way prefabricated slabs, Framed buildings with partial and curtain walls

UNIT III: FLOORS, STAIRS AND ROOFS   9 Hrs

Types of floor slabs, analysis and design example of cored and panel types and two-way systems, staircase slab design, types of roof slabs and insulation requirements, Description of joints

UNIT IV: WALLS   9 Hrs

Types of wall panels, Blocks and large panels, Curtain, Partition and load bearing   walls, types of wall joints, Leak prevention, joint sealants, sandwich wall panels.

UNIT V: ACCESSORIES AND PLUMPING   9 Hrs

Folded plate and hyper-prefabricated shells, Erection and jointing, joint design, Water leakage, damp proofing

                                                                  Total No of Hours: 45

OBJECTIVES : General principle in the design of steel structures such as Various types of connections, Steel transmission line towers, Plastic method of structural analysis and Analysis and design of industrial structures.

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To know the general principle of steel structures in various field.
CO2	To understand the Various types of connections, Steel transmission line towers.
CO3	Analyze and design of beam and column stability and strength
CO4	Design welded and bolted connections and Plastic Analysis
CO5	Design of Industrial structures & Pre-Engineered Building

UNIT I   GENERAL   9 Hrs

Beams subjected to biaxial bending - Built-up Purlins - Various types and design -Design of Wind girders-Beam-columns - With various support conditions-Design of foundations-with lateral forces.

UNIT II   CONNECTIONS   9 Hrs

Bearing type joints - unstiffened and stiffened seat connections - moment resisting connection of brackets-bolted and welded-semi-rigid connections.

UNIT III   TOWERS   9 Hrs

Basic structural configurations - free standing and guyed towers - loads on towers -wind loads - foundation design - design criteria for different configurations and transmission line towers

UNIT IV PLASTIC ANALYSIS   9 Hrs

Theory of plastic bending - Plastic hinge concept - Mechanism method – Application to continuous beams and portal frames-Plastic moment distribution - Analysis of Gable frames - instantaneous centre of rotation - Connections.

UNIT V   INDUSTRIAL BUILDINGS AND PRE-ENGINEERED BUILDINGS   9 Hrs

Industrial buildings-braced and unbraced - Gable frames with gantry-Rigid industrial frames-Fire resistant design-Fatigue resistant design-Standard design loads – Advantages of pre engineered buildings - Framing systems for Pre Engineered steel buildings – Characteristics of Pre Engineered steel buildings

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab						

UNIT I: DESIGN CRITERIA   9 Hrs

Design philosophy- Loading- Sequential loading and materials - high performance Concrete - Fiber reinforced Concrete - Light weight Concrete - Design mixes.

UNIT II: LOADING AND MOVEMENT   9 Hrs

Gravity Loading: Dead and live load- methods of live load reduction-Impact- gravity loading, construction load

Wind loading: Static and dynamic approach- Analytical and wind tunnel experimental method.

Earthquake loading: Equivalent lateral force- modal analysis- combinations of loading working stress design-Limit state design- plastic design.

UNIT III: BEHAVIOUR OF VARIOUS STRUCTURAL SYSTEMS   9 Hrs

Factors affecting growth- Height and Structural form- High rise behaviour Rigid frames- braced frames- Infilled frames- shear walls- coupled shear walls- wall-frames- tubular- cores- futrigger - braced and hybrid mega system.

UNIT IV: ANALYSIS AND DESIGN   9 Hrs

Modeling for approximate analysis- Accurate analysis and reduction techniques- Analysis of building as total structural system considering overall integrity and major subsystem interaction- Anlysis for member forces-drift and twist- computerised general three dimensional analysis.

Structural Elements : Sectional shapes, properties and resisting capacity-design- deflection- cracking,- prestressing-shear flow- Design for differential movement- creep and shrinkage effects- temperature effects and fire resistance.

UNIT V: STABILITY OF TALL BUILDINGS   9 Hrs

Overall buckling analysis of frames, wall-frames- Approximate methods- second order effects of gravity of loading- P-Delta analysis- simultaneous first-order and P-Delta analysis-Translational-Torsional instability- out of plum effects- stiffness of member in stability- effect of foundation rotation.

Total No of Hours: 45

Course Code : **EMSE22E12**	Course Name: **DESIGN OF MASONRY STRUCTURES**	Ty/Lb/ETL	L	T / S.Lr	P/ R	C
	Prerequisite : Design of concrete structures I & II	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES : To study the behaviour, analysis and design of masonry structures

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	Knowledge about the strength and stability of concrete materials and structures
CO2	Understand the behaviour of the masonry structures in various load conditions.
CO3	Learned about the design parameters using code provisions
CO4	Ability to design the masonry structures by applying different loads.
CO5	To apply the innovative idea for masonry structures

Mapping of Course Outcomes with Program Outcomes (POs)

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab						

UNIT I: MATERIALS,STRENGTH AND STABILITY   9 Hrs

Bricks, Stone and Block masonry units- strength, modulus of elasticity and water absorption of masonry materials – classification and properties of mortars. Defects and Errors in masonry construction – cracks in masonry, types, reason for cracking, methods of avoiding cracks.

Strength and stability of axially loaded masonry walls-effect of unit strength- mortar strength- joint thicknes,-rate of absorption- effect of curing- effect of ageing- workmanship- Compressive strength formulae based on elastic theory and empirical formulae

UNIT II: DESIGN CONSIDERATIONS: 9 Hrs

Types of walls, permissible compressive stress, stress reduction and shape modification factors, increase in permissible stresses for eccentric vertical and lateral load, permissible tensile stress and shear stresses.

Effective height of walls and columns, openings in walls, effective length, effective thickness, slenderness ratio, eccentricity, load dispersion, arching action in lintels. Problems on design considerations for solid walls, cavity walls, wall with pillars

UNIT III: DESIGN OF MASONRY SUBJECTED TO AXIAL LOADS: 9 Hrs

Design criteria, design examples of walls under UDL, solid walls, cavity walls, solid wall supported at the ends by cross wall, walls with piers.

Solid walls, cavity walls, solid wall supported at the ends by cross wall, walls with piers, design of wall with openings.

UNIT IV: DESIGN OF WALLS SUBJECTED TO ECCENTRIC LOADS: 9 Hrs

Design criteria – stress distribution under eccentric loads – problems on eccentrically loaded solid walls, cavity walls, walls with piers.

UNIT V: DESIGN OF LATERALLY AND TRANSVERSELY LOADED WALLS: 9 Hrs

Design criteria, design of solid wall under wind loading, design of shear wall – design of compound walls. Introduction to reinforced brick masonry, lintels and slabs.

Total No of Hours: 45

	Prerequisite : Design of concrete structure -I	Ty	3	0/0	0/0	3

UNIT I: OVERALL REVIEW   9 Hrs

Review of limit state design of beams - Slabs and columns according to IS 456-2000 - Calculation of deflection and crack width according to IS 456-2000.

UNIT II: DESIGN OF SPECIAL RC ELEMENTS   9 Hrs

Design of Slender columns - Design of R.C walls - Ordinary and shear walls - Design of Corbels - Deep – beams and grid floors.

UNIT III: FLAT SLABS AND FLAT PLATES   9 Hrs

Design of flat slabs and flat plates according to ACI method - Design of shear load - reinforcement and edge(spandrel) beams - Yield line theory and Hillerberg method of design of slabs.

UNIT IV: INELASTIC BEHAVIOUR OF CONCRETE BEAMS   9 Hrs

Inelastic behavior of concrete beams - moment - rotation curves - moment redistribution - Baker's method of plastic design - Design of cast-in-situ joints in frames.

UNIT V: DESIGN AND DETAILING OF STRUCTURES   9 Hrs

Detailing for ductility - Fire Resistance of buildings - Field control of concrete - Strengthening of existing structures - Design and detailing of structures according to different codes.

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab						

UNIT I: FOUNDATIONS: AN INTRODUCTION   9 Hrs

General considerations: Functions of foundations. Requisites of satisfactory foundations. Different types of foundations. Definition of shallow and deep foundation. Selection of type of foundation. Advantages and limitations of various types of foundations. Design considerations . Footings subjected to eccentric loading. Conventional procedure for proportioning footings for equal settlements. Open excavation: Open foundation excavations with unsupported slopes. Supports for shallow and deep excavations. Stress distribution in sheeting and bracing of shallow and deep excavations. Stability of bottom of excavations..

UNIT II: SHALLOW FOUNDATIONS   9 Hrs

Shallow Foundations: Definitions, Bearing Capacity of Footings; Terzaghi, Mayerhof and Skempton's analysis. Effect of Rising and Lowering of Water Table on Bearing Capacity; Settlement: Permissible, Total and Differential Settlements as per IS Code. Plate Load test, Standard Penetration and Cone Penetration Tests for Determining Allowable Bearing Pressure Raft foundations: Bearing capacity equations. Design considerations. Conventional design procedure for rigid mat. Uplift pressures. Methods of resisting uplift. Floating foundations.

UNIT III: PILE FOUNDATIONS   9 Hrs

Uses of piles. Classification of piles based on purpose and material. Determination of type and length of piles. Determination of bearing capacity of axially loaded. Single vertical pile. Static and dynamic formulae. Determination of bearing capacity by penetration tests and pile load tests (IS methods). Negative skin friction. Group action and pile spacing. Analysis of pile groups. Load distribution by Culmann's method. Caissons and piers: Open (well) caissons. Box (floating) caissons. Pneumatic caissons. Construction details and design considerations of well foundations. Drilled piers and their construction details.

UNIT IV: WELL FOUNDATIONS   9 Hrs

Introduction, Different shapes and characteristics of wells. Components of well foundation. Forces acting on well foundation. Sinking of wells. Causes and remedies of tilts and shifts.

UNIT V: MACHINE FOUNDATIONS   9Hrs

Machine Foundation: Design Criteria, Free and Forced Vibrations for Single Degree of Freedom systems, Undamped and Damped Case, Types of Machine Foundations.

Total No of Hours: 45

T/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES : To analyze structural engineering systems by various approaches

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To learn about the fundamental concept of stiffness and flexibility matrix
CO2	To understand the knowledge about substructures
CO3	Get knowledge about shear wall and analyze the concept of substructure techniques
CO4	Analyze the skeleton structures using matrix methods.
CO5	Use of computer package for understanding problems

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: Credits T/L/ETL : Theory / Lab / Embedded Theory and Lab						

UNIT I: FUNDAMENTAL CONCEPTS   9 Hrs

Static and Kinematic indeterminacy - Concepts of stiffness and flexibility - Energy concepts - Principle of minimum potential energy and minimum complementary energy - Development of element flexibility and element stiffness matrices for truss - beam and grid elements.

UNIT II: STIFFNESS METHOD (Systems Approach)   9 Hrs

Basis of stiffness method - Degrees of freedom - Force displacement relationships - Nodal stiffness.

UNIT III: FLEXIBILITY METHOD (Systems Approach)   9 Hrs

Flexibility coefficients - Basis of the method - Application to various types of structures.

UNIT IV: COMPUTER APPLICATION   9 Hrs

Computer Applications and use of Computer packages - Programming techniques and problems.

UNIT V: ANALYSIS BY SUBSTRUCTURE TECHNIQUE   9 Hrs

A special analysis procedure - static condensation and sub structuring - initial and thermal stresses - Shear walls - Necessity - structural behaviour of large frames with and without shear walls - approximate methods of analysis of shear walls.

Total No of Hours: 45

OBJECTIVES : The objectives of this course is to make students to learn principles and Design ofindustrial building

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To learn principles of Design of industrial building
CO2	To design different components of industrial structures and to detail the structures
CO3	To evaluate the performance of the Pre- engineered buildings
CO4	To design various structures such as Bunkers, Silos, Cooling Towers, Chimneys, and Transmission Towers with required foundations.
CO5	To plan industrial structures for functional requirements

UNIT I   INTRODUCTION   9 Hrs

Analysis of industrial building for Gravity and Wind load. Analysis and design of framing components namely, girders, trusses, gable frames

UNIT II   GANTRY GIRDER   9 Hrs

Analysis and design of gantry girder, purlins, girts, bracings including all connections.

UNIT III   TRANSMISSION TOWERS   9 Hrs

Analysis of transmission line towers for wind load and design of towers including all connections.

UNIT IV   COLD FORMED STRUCTURES   9 Hrs

Forms of light guage sections, Effective width computation of unstiffened, stiffened, multiple stiffened compression elements of cold formed light guage sections. Concept of local buckling of thin elements. Limiting width to thickness ratio. Post buckling strength.

UNIT V   PRE – ENGINEERED STRUCTURES   9 Hrs

Concept of Pre- engineered buildings, Design of compression and tension members of cold formed light guage sections, Design of flexural members (Laterally restrained / laterally unrestrained).

UNIT I INTRODUCTION AND CODAL PROVISIONS   9 Hrs

Principles of Prestressing - types and systems of prestressing, need for High Strength materials, Analysis methods losses, deflection (short-long term), camber, cable layouts. Behaviour under flexure - codal provisions (IS, British ACI), ultimate strength. Design of flexural members,

UNIT II DESIGN OF COMPRESSION MEMBERS   9 Hrs

Design for Shear, bond and torsion. Design of End blocks and their importance Design of tension members - application in the design of prestressed pipes and prestressed concrete cylindrical water tanks. Design of compression members with and without flexure - its application in the design piles, flagmasts and similar structures.

UNIT III COMPOSITE BEAMS   9 Hrs

Composite beams - analysis and design, ultimate strength - their applications. Partial prestressing - its advantages and applications.

UNIT IV CONTINUOUS BEAMS   9 Hrs

Application of prestressing in continuous beams, concept of linear transformation, concordant cable profile and cap cables.

UNIT V DESIGN OF SPECIAL STRUCTURES   9 Hrs

Special structures like prestressed folded plates, prestressed cylindrical shells, prestressed concrete poles.

Total No of Hours: 45

	Prerequisite : Applied Mechanics	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES : Students will be able to analysis of composite plates by using various methods of differentstructural components.

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To remember the basic concept about the various theories of mechanics
CO2	To understand the concept of composite plates
CO3	Analyse the rectangular composite plates using the analytical methods.
CO4	Analyse the composite plates using advanced finite element method
CO5	Develop the computer programs for the analysis of composite plates.

UNIT I INTRODUCTION   9 Hrs

Displacement Field Approximations for Classical Laminated Plate Theory (CLPT) and First Order Shear Deformation Theory (FSDT), Analytical Solutions for Bending of Rectangular Laminated Plates using CLPT.

UNIT II GOVERNING EQUATIONS.   9Hrs

Navier Solutions of Cross-Ply and Angle-Ply Laminated Simply Supported Plates, Determination of Stresses. Levy Solutions for Plates with Other Boundary Conditions, Analytical Solutions for Bending of Rectangular Laminated Plates Using FSDT.

UNIT III INTRODUCTION TO FINITE ELEMENT METHOD   9Hrs

Rectangular Elements, Formation of Stiffness Matrix, Formation of Load Vector, Numerical Integration, Post Computation of Stresses.

UNIT IV RECTANGULAR LAMINATED PLATES   9Hrs

Finite Element Solutions for Bending of Rectangular Laminated Plates using FSDT, Finite Element Model, C0Element Formulation, Post Computation of Stresses.

UNIT V RECTANGULAR COMPOSITE PLATES   9Hrs

Analysis of Rectangular Composite Plates using Analytical Methods..

Total No of Hours: 45

	Prerequisite : Need to study failure theory of structures	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: CreditsT/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES : To impart knowledge on the mechanisms of failure and non linear fracture mechanics.

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To learn the Fundamentals of Fracture Mechanics and fracture cracking
CO2	Know about the analysis and model of fracture failure
CO3	Ability to know Nonlinear Fracture Mechanics
CO4	Analyse the mechanics of concrete structures in various field.
CO5	To impart knowledge on the mechanisms of failure and non linear fracture mechanics.

L : Lecture T : Tutorial SLr : Supervised Learning P : Project R : Research C: Credits
T/L/ETL : Theory / Lab / Embedded Theory and Lab

UNIT I : FUNDAMENTALS   9 Hrs

Fundamentals of Fracture Mechanics, Mechanisms of fracture and crack growth

UNIT II : FRACTURE CRACKING   9 Hrs

Cleavage fracture, ductile fracture, fatigue cracking, Environment assisted cracking, Quasi brittle materials.

UNIT III : FRACTURE ANALYSIS   9 Hrs

Service failure analysis, linear elastic fracture mechanics, Griffith's criteria, stress intensity factors, crack tip plastic zone, Erwin's plastic zone correction, R curves, compliance, J Integral, nonlinear analysis ,Review of concrete behaviour in tension and compression, Basic frameworks for modeling of quasibrittle materials.

UNIT IV : NON LINEAR FRACTURE MECHANICS   9 Hrs

Nonlinear Fracture Mechanics – Discrete crack concept/Smeared crack concept, Size effect, Plasticity models for concrete – Associated and non-associated flow, Failure surfaces for quasibrittle materials.

UNIT V : MODELS   9 Hrs

Concept of CTOD and CMD, Material models, crack models, band models, models based on continuum damage mechanics

Total No of Hours: 45

OBJECTIVES : To learn the principles of measurements of static and dynamic response of Structures and carryoutthe analysis of results.

COURSE OUTCOMES (Cos) :
At the end of the course, students will be able to

CO1	To study the basic concepts of engineering seismology and ground motion characteristics
CO2	To understand the strength and capacity design principles of earthquake resistant design.
CO3	Ability to know the various types of buildings under static and dynamic forces
CO4	Design various beam-column joints as per ductility requirements
CO5	Analyze and design unreinforced and reinforced masonry and concrete shear wall structures

UNIT I: HISTORICAL 9 Hrs

Elements of Engineering Seismology - Theory of Vibration - Response Spectrum-Indian Seismicity - Earthquake History - Behaviour of Structures in the past Earthquakes.

UNIT II: DESIGN CONCEPTS 9 Hrs

Seismic Design Concepts - Cyclic load behaviour of RC, Steel and Prestressed Concrete elements – Design spectrum - Principles of capacity design.

UNIT III: CODAL PROVISIONS 9 Hrs

Provisions of Seismic Code (IS 1893) - Building systems frames, shear walls, Braced Frames, Combinations - Torsion.

UNIT IV: DESIGN AND DETAILING 9 Hrs

Performance of Regular Buildings 3 D Computer Analysis of Building Systems (Theory Only) - Design and Detailing of frames - Shear walls and Frame walls.

UNIT V: SPECIAL PROBLEMS AND CASE STUDIES 9 Hrs

Structural Configuration - Seismic performance - Irregular Buildings - Soil performance, Modern Concepts – Base Isolation - Adoptive system - Case studies.

Objectives Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.

COURSE OUTCOMES (COs) : At the end of this course the students would be able to

CO1	Evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
CO2	Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
CO3	Understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in

Unit I

Introduction   **5 Hrs**

Disaster: Definition, Factors And Significance; Difference Between Hazard And Disaster; Natural And Manmade Disasters: Difference, Nature, Types And Magnitude.

Unit II   **5 Hrs**

Repercussions Of Disasters And Hazards:

Economic Damage, Loss Of Human And Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

Unit III   **5 Hrs**

Disaster Prone Areas In India :

Study Of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami; Post-Disaster Diseases And Epidemics

Unit IV   **5 Hrs**

Disaster Preparedness And Management : Preparedness: Monitoring of Phenomena Triggering A Disaster or Hazard; Evaluation of Risk: Application Of Remote Sensing, Data From Meteorological And Other Agencies, Media Reports: Governmental And Community Preparedness.

Unit V   **5 Hrs**

Risk Assessment : Disaster Risk: Concept And Elements, Disaster Risk Reduction, Global And National Disaster Risk Situation. Techniques Of Risk Assessment, Global Co-Operation In Risk Assessment And Warning, People's Participation In Risk Assessment. Strategies for Survival.

Unit VI   **5 Hrs**

Disaster Mitigation : Meaning, Concept And Strategies Of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation And Non-Structural Mitigation, Programs Of Disaster Mitigation In India.

	Prerequisite: Nil	IE	2	0/0	0/0	0

L : Lecture T : Tutorial   P : Project R : Research C: Credits T/L: Theory/Lab

Objectives Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective. To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

COURSE OUTCOMES (COs) : At the end of this course the students would be able to know

CO1	Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
CO2	Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
CO3	. Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.
CO4	Discuss the passage of the Hindu Code Bill of 1956.

Unit 4:   **6 hrs**

Local Administration:

District's Administration head: Role and Importance,Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation.Pachayati raj: Introduction, PRI: ZilaPachayat. Elected officials and their roles, CEO ZilaPachayat: Position and role. Block level: Organizational Hierarchy (Different departments),Village level: Role of Elected and Appointed officials, Importance of grass root democracy

Unit 4:   **6 hrs**

Election Commission: Role and Functioning.Chief Election Commissioner and Election Commissioners.State Election Commission: Role and Functioning.Institute and Bodies for the welfare of SC/ST/OBC and women.

                                                 TOTAL HOURS: 30

	Prerequisite: Nil		IE	2	0/0	0/0	0

L : Lecture T : Tutorial   P : Project R : Research C: Credits T/L: Theory/Lab

Objectives Students will be able to: 4. Review existing evidence on the review topic to inform programme design and policy making undertaken by the DfID, other agencies and researchers. 5. Identify critical evidence gaps to guide the development.

COURSE OUTCOMES (COs) : At the end of this course the students would be able to know

CO1	What pedagogical practices are being used by teachers in formal and informal classrooms in developing countries?
CO2	What is the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population of learners?
CO3	How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy?

Unit I:

Introduction and Methodology: 6 hrs

Aims and rationale, Policy background, Conceptual framework and terminology ,Theories of learning, Curriculum, Teacher education. Conceptual framework, Research questions**.** Overview of methodology and Searching.

Unit II:

Thematic overview: 6 hrs

Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries. Curriculum, Teacher education.

Unit III: Evidence on the effectiveness of pedagogical practices 6 hrs

Methodology for the in depth stage: quality assessment of included studies. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? Theory of change. Strength and nature of the body of evidence for effective pedagogical practices. Pedagogic theory and pedagogical approaches. Teachers' attitudes and beliefs and Pedagogic strategies.

Unit IV: Professional development: 6 hrs

Alignment with classroom practices and follow-up support, Peer support, Support from the head teacher and the community. Curriculum and assessment, Barriers to learning: limited resources and large class sizes.

Unit V: Research gaps and future directions: 6 hrs

Research design, Contexts, Pedagogy, Teacher education, Curriculum and Assessment, Dissemination and research impact.

TOTAL HOURS: 30

	Prerequisite : **Basic Knowledge of Yoga**	IE	2	0/0	0/0	0

L : Lecture T : Tutorial   P : Project R : Research C: Credits T/L: Theory/Lab

Objectives

To Understand the Basic Concepts of Yoga

To Gain knowledge on Ashtanga yoga

To Acquire knowledge of Techniques and Practice of Yogasanas

To Understand stress and the causes. To Attain the knowledge about stress busting through yoga

CO1	Understand the Basic Concepts of Yoga
CO2	Gain knowledge on Ashtanga yoga
CO3	To Understand stress and the causes
CO4	Acquire knowledge of Techniques and Practice of Yogasanas
CO5	Attain the knowledge about stress busting through yoga

Course Code: EMCC22I07	Course Name: STRESS MANAGEMENT BY YOGA	Ty/Lb /ETL	L	T/S .Lr	P/R	C
	Prerequisite : **Basic Knowledge of Yoga**	IE	2	0/0	0/0	0
L : Lecture T : Tutorial P : Project R : Research C: Credits T/L: Theory/Lab						

Unit 1:   **6 hrs**

  What is stress - Symptoms of stress - Why is stress helpful - Why is stress harmful - Stress versus burnout - Main types of stress - Know your stressors - Tips to Manage Stress

Unit 2:   **6 hrs**

Strength, Weaknesses, Opportunities and Threats (SWOT) Analysis, Who am I, Attributes, Importance of Self Confidence, Self Esteem. Emotional Intelligence, What is Emotional Intelligence, emotional quotient why Emotional Intelligence matters, Emotion Scales. Managing Emotions

Unit 3:   **6 hrs**

What is Yoga – Definition and Its Branches - Hatha Yoga – Kundalini Yoga – Tantra Yoga – Kriya Yoga – Introduction To Ashtanga Yoga

Unit 4:   **6 hrs**

Mechanism of Stress related diseases: Psychic, Psychosomatic, Somatic and Organic phase. Role   of Meditation & Pranayama on stress – physiological aspect of Meditation. Constant stress & strain, anxiety, conflicts resulting in fatigue among Executive. Contribution of Yoga to solve the stress related problems of Executive

Unit 5:   **6 hrs**

Meaning and definition of Health – various dimensions of health (Physical, Mental, Social and Spiritual) – Yoga and health – Yoga as therapy. Physical fitness. Stress control exercise – Sitting meditation, Walking meditation, Progressive muscular relaxation, Gentle stretches and Massage.

                                                                        TOTAL HOURS : 30

	Prerequisite: Nil	IE	2	0/0	0/0	0

L : Lecture T : Tutorial   P : Project R : Research C: Credits T/L: Theory/Lab

Objectives To learn to achieve the highest goal happily , To become a person with stable mind, pleasing personality and determination. To awaken wisdom in student

COURSE OUTCOMES (COs) : At the end of this course the students would be able to know

CO1	Study of Shrimad-Bhagwad-Geeta will help the student in developing his personality and achieve the highest goal in life
CO2	The person who has studied Geeta will lead the nation and mankind to peace and prosperity
CO3	Study of Neetishatakam will help in developing versatile personality of students.

OBJECTIVE:
- To understand the philosophy of science and ethics, research integrity and publication ethics.
- To identify research misconduct and predatory publications.
- To understand indexing and citation databases, open access publications, research metrics (citations, h-index, impact Factor, etc.).

COURSE OUTCOMES (COs) : By doing this course students will

CO1	Understand the ethical issues related to Research and Publication
CO2	Get to know about different types of plagiarism and ways for avoiding plagiarism
CO3	Know about best practices and guidelines in publication ethics and also learns to avoid Publication misconduct
CO4	Get to know about Violation of publication ethics, authorship and contributor ship and get to identify about Predatory publishers and journals.
CO5	Get to know about various open sources database and research metrics like indexing, citation etc.,

Unit 1. Introduction   6 Hrs.

Introduction to philosophy: Definition, nature and scope, concept, branches - Ethics: Definition, moral philosophy, nature of moral judgments and reactions – Ethics with respect to Science and Research Intellectual honesty and research integrity.

Unit II: Scientific Conduct   6 Hrs.

Scientific misconducts: Falsification, Fabrication, and Plagiarism (FFP) Redundant Publications: Duplicate and over lapping publications, salami slicing – Selective reportingand misrepresentation of data.

Unit III: Publication Ethics -I   6 Hrs.

Publication ethics: Definition, introduction and importance – Best practices/standards setting initiatives and guidelines: COPE, WAME etc. Publication misconduct: definition, Concept, problems that lead to unethical behavior and vice-versa, types.

Unit IV: Publication Ethics – II   6 Hrs.

Violation of publication ethics, authorship and contributor ship – Identification of publication misconduct, complaints and appeals – Predatory publishers and journals – Subject specific ethical issues, Complaints and appeals: examples and fraud from India and Abroad.

Unit V: Data Bases and Research Metrics   6 Hrs.

Open Access publication and Initiatives – Indexing databases – Citation databases, Web of Science,Scopus, etc. – Impact factor of journals as per Journal Citation report .SNIP, SJR, IPP, Cite Score - Metrics: h-index,gindex,i10index,altmetrics – Conflict of interest.

                                                    TOTAL HOURS : 30

Course Code : EMCC22OE1	Course Name BUSINESS ANALYTICS	Ty / Lb/ ETL/IE	L	T / S.Lr	P/ R	C
	Prerequisite: Nil	TY	3	0/0	0/0	3

L : Lecture T : Tutorial   P : Project R : Research C: Credits T/L: Theory/Lab

Objectives . Understand the role of business analytics within an organization. Analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization. To gain an understanding of how managers use business analytics to formulate and solve business problems and to support managerial decision making. To become familiar with processes needed to develop, report, and analyze business data. Use decision-making tools/Operations research techniques. Mange business process using analytical and management tools. Analyze and solve problems from different industries such as manufacturing, service, retail, software, banking and finance, sports, pharmaceutical, aerospace etc.

COURSE OUTCOMES (COs) : At the end of this course the students would be able to

CO1	Students will demonstrate knowledge of data analytics. . Students will demonstrate the ability of think critically in making decisions based on data and deep analytics..
CO2	Students will demonstrate the ability to use technical skills in predicative and prescriptive modeling to support business decision-making.
CO3	Students will demonstrate the ability to translate data into clear, actionable insights

Unit I   Business analytics   **9hours**
Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview.

Unit II   Trendiness and Regression Analysis   **9hours**
Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.

Unit III Organization Structures of Business analytics   **9hours**
Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization.

Unit IV Forecasting Techniques   **9hours**
Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model.

Unit V Decision Analysis   **9hours**
Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, The Value of Information, Utility and Decision Making - Recent Trends in : Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

Total no. of Hours: 45

Unit I Industrial safety   9hours
Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

Unit II Fundamentals of maintenance Engineering   9hours
Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

Unit III Wear and Corrosion and their Prevention   9hours
Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

Unit IV Fault tracing   9hours
Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, I. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

Unit V Periodic and preventive maintenance   9hours
Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: I. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance

Course Code :: EMCC22OE3	Course Name COST MANAGEMENT OF ENGINEERING PROJECTS	Ty / Lb/ ETL/IE	L	T / S.Lr	P/ R	C
	Prerequisite: Nil	TY	3	0/0	0/0	3

1.

Unit I Overview of Cost Management Process   9hours
Introduction and Overview of the Strategic Cost Management Process

Unit II   Concept of Cost   9hours
Cost concepts in decision-making; Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control - Provision of data for Decision-Making.

Unit III Project   9hours
Meaning, Different types, why to manage, cost overruns centers, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and non-technical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team:. Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process

Unit IV Cost Behavior & Profit   9hours
Cost Behavior and Profit Planning Marginal Costing; Distinction between Marginal Costing and Absorption Costing; Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis. Pricing strategies: Pareto Analysis. Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity- Based Cost Management, -Bench Marking; Balanced Score Card and Value-Chain Analysis. Budgetary Control- Flexible Budgets; Performance budgets; Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

Unit V   Quantitative Techniques   9hours
Quantitative techniques for cost management, Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

Total no. of Hours: 45

Suggested reading:
1. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
2. Charles T. Horngren and George Foster, Advanced Management Accounting
3. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting
4. Ashish K. Bhattacharya, Principles & Practices of CostAccounting A. H. Wheeler publisher
5. N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

Course Code : EMCC22OE4	Course Name: COMPOSITE MATERIALS		Ty / Lb/ ETL/IE	L	T / S.Lr	P/ R	C
	Prerequisite: Nil		TY	3	0/0	0/0	3

L : Lecture T : Tutorial   P : Project R : Research C: Credits T/L: Theory/Lab

Objectives To understand nature of the composite material and apply them wherever required

COURSE OUTCOMES (COs) : At the end of this course the students would be able to

CO1	Understand the nature ,types and th applications of composite materials
CO2	Understand the synthesis of different types of metal matrix materials
CO3	Understand the polymeric composite materials and the characteristic feature of composite materials

Mapping of Course Outcomes with Program Outcomes (POs)

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9			
CO1	3	3	3	3	2	1	1	1	2			
CO2	3	3	3	3	2	1	1	1	2			
CO3	3	3	3	3	2	1	1	1	2			

COs / PSOs	PSO1	PSO2	PSO3			
CO1	2	2	2			
CO2	2	2	2			
CO3	2	2	2

Course Code : EMCC22OE4	Course Name: COMPOSITE MATERIALS	Ty / Lb/ ETL/IE	L	T / S.Lr	P/ R	C
	Prerequisite: Nil	TY	3	0/0	0/0	3

L : Lecture T : Tutorial   P : Project R : Research C: Credits T/L: Theory/Lab

Unit I Introduction   **9hours**

Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

Unit II Reinforcements   **9hours**

Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.

Unit III Manufacturing of Metal Matrix Composites   **9hours**

Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving. Properties and applications.

Unit IV Manufacturing of Polymer Matrix Composites   **9hours**

Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.

Unit V Strength   **9hours**

Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first play failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

Total no. of Hours: 45

Suggested Reading:
1. Material Science and Technology – Vol 13 – Composites by R.W.Cahn – VCH, West Germany.
2. Materials Science and Engineering, An introduction. WD Callister, Jr., Adapted by R. Balasubramaniam, John Wiley & Sons, NY, Indian edition, 2207.
3. Hand Book of Composite Materials-ed-Lubin.
4. Composite Materials – K.K.Chawla.
5. Composite Materials Science and Applications – Deborah D.L. Chung.
6. Composite Materials Design and Applications – Danial Gay, Suong V. Hoa, and Stephen W. Tasi

Course Code : EMCC22OE5	Course Name: WASTE TO ENERGY		Ty / Lb/ ETL/IE	L	T / S.Lr	P/ R	C
	Prerequisite: Nil		TY	3	0/0	0/0	3

L : Lecture T : Tutorial   P : Project R : Research C: Credits T/L: Theory/Lab

Objectives To understand the concept of producing energy from the waste material

COURSE OUTCOMES (COs) : At the end of this course the students would be able to

CO1	Understand the different type of waste which can be converted to fuel
CO2	Understand the concepts and methods of biomass pyrolysis, gasification and combustion
CO3	Understand the production and characterization of biogas technology

Mapping of Course Outcomes with Program Outcomes (POs)

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9			
CO1	3	3	3	3	2	1	1	1	2			
CO2	3	3	3	3	2	1	1	1	2			
CO3	3	3	3	3	2	1	1	1	2			

COs / PSOs	PSO1	PSO2	PSO3		
CO1	3	3	3		
CO2	3	3	3		
CO3	3	3	3		

3/2/1 Indicates Strength Of Correlation, 3 – High, 2- Medium, 1- Low

Course Code : EMCC22OE5	Course Name: WASTE TO ENERGY	Ty / Lb/ ETL/IE	L	T / S.Lr	P/ R	C
	Prerequisite: Nil	TY	3	0/0	0/0	3
L : Lecture T : Tutorial P : Project R : Research C: Credits T/L: Theory/Lab						

Unit I   Introduction   **9hours**
Introduction to Energy from Waste: Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors

Unit II Biomass Pyrolysis   **9hours**
Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods - Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

Unit III Biomass Gasification   **9hours**
Gasifiers – Fixed bed system – Downdraft and updraft gasifiers – Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement for thermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kinetic consideration in gasifier operation.

Unit IV   Biomass Combustion   **9hours**
Biomass stoves – Improved chullahs, types, some exotic designs, Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

Unit V   Biogas   **9hours**
Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.
