

FACULTY OF ENGINEERING AND TECHNOLOGY

OUTCOME BASED CURRICULUM

Curriculum and Syllabus

BACHELOR OF TECHNOLOGY ELECTRONICS AND COMMUNICATION ENGINEERING (FULL TIME) 2022

DEPARTMENT OF

ELECTRONICS AND COMMUNICATION ENGINEERING

B.Tech ECE 2022 Regulation

DECLARATION

I, **Mrs.U.Jayalatsumi**, Head, Dept of Electronics and Communication Engineering hereby declare that this copy of the syllabus (B.Tech Electronics and Communication Engineering UG – Full Time 2022 Regulation) from page number 1 to 268 is the final version which is being taught in the class and uploaded in our University website. I assure that the Syllabus available in our University website is verified and found correct. The Curriculum and Syllabi have been approved by our Academic Council / Vice Chancellor.

Date:

Signature

VISION AND MISSION OF THE DEPARTMENT

VISION

• To achieve excellence in academics and research in evolving competent core areas of Electronics and Communication Engineering and to effectively respond to the demands of industry and R & D organizations.

MISSION

- M1: To accomplish academic excellence through valuable teaching-learning processes to meet requirements of the industry and society.
- M2: To prepare students to face the challenges in the field of electronics and communication engineering and prepare them as responsible engineers with ethical values.
- M3: To promote the zeal for innovation and creativity among students towards research and development.
- M4: To augment students with skills needed for employability, entrepreneurship and for pursuing higher studies.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO 1:** Graduates will apply their analytical skills to explore socially acceptable and economically feasible solutions for real-life problems using modern design tools.
- **PEO 2:** Graduates will work in a diverse environment with effective communication skills and ethical teamwork to address the needs of the organization and society.
- **PEO 3:** Graduates will continue to develop in their careers by engaging in lifelong learning and research.
- **PEO 4:** Graduates will succeed as entrepreneurs by exhibiting their leadership traits and innovative skills.

PROGRAM SPECIFIC OUTCOMES (PSOs)

Upon the completion of program, graduates will be able to

- **PSO1**: Recognize, adapt the knowledge of science, engineering and mathematics for providing solutions to techno-economical problems in real world.
- **PSO2**: Formulate logical approach to solve engineering problems in core area of Electronics and Communication Engineering.
- **PSO3**: Demonstrate inter-disciplinary subject knowledge in diverse fields of Engineering and Technology.
- **PSO4**: Apply the emerging technology and open source tool for life-long learning to face the challenges in society.

PROGRAM OUTCOMES (POs)

Engineering graduates will be able to:

- **PO-1** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO-2** Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO-3** Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO-4** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO-5** Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO-6** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO-7** Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO-8** Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO-9** Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO-10** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO-11** Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO-12** Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

MISSION/ PEO	PEO1	PEO2	PEO3	PEO4
M1	3	2	2	1
M2	3	2	3	3
M3	2	3	2	1
M4	2	3	1	1

CATIONAL AND	RESEARCH INSTIT
DEEMED TO	BE UNIVERSITY
University with G	raded Autonomy Status
(Ap ISO 21001 · 2	018 Cortified Institution)

Dr_

(An ISO 21001 : 2018 Certified Institution) Periyar E.V.R. High Road, Maduravoyal, Chennai-95. Tamilnadu, India.

M.G.R.

Subject Code	Subject Name : TECHNICAL ENGLISH	Ty/ Lb/ ETL/IE	L	T/SLr	P/R	С
EBEN22001	Prerequisite : Pass in Plus 2 English	Ту	2	0/0	0/0	2

UNIT I VOCABULARY DEVELOPMENT

EDU

Affixes: prefixes and suffixes and word formation-synonyms and antonyms-nominal compounds, expanding using numbers and approximation - preposition, prepositional phrases, preposition + relative pronounadjective: degrees of comparison, formation of adjectives, irregular comparatives- Infinitive and Gerunds

UNIT II GRAMMAR

Tenses- auxiliary and modal -voice: active, passive and impersonal passive - Questions: Wh-pattern, Yes/no questions, tag questions – adverbs and adverbial clauses- 'If' clause, 'cause and effect', 'purpose'- Concord: subject-verb agreement

UNIT III READING

Comprehension: extracting relevant information from the text, by skimming and scanning and inferring, identifying lexical and contextual meaning for specific information, identifying the topic sentence and its role in each paragraph, comprehension exercises - Note - making - Précis writing-instructions, suggestions and recommendations.

UNIT IV WRITING

Jumbled sentences - paragraph writing coherence devices- discourse markers. Essay writing- Letter writing, Informal and formal: seeking permission to undergo practical training, letter to an editor of a newspaper complaining about civic problems and suggesting suitable solutions

UNIT V VISUAL AIDS IN COMMUNICATION

Interpretation of diagrams - tables, flow charts, pie charts and bar charts, and their use in Business reports

Total Number of Hours: 30

TEXT BOOK

1. Panorama: Content Integrated Language Learning for Engineers, M. Chandrasena Rajeswaran & R.Pushkala, Vijay Nicole Imprints Pvt. Ltd., Chennai

Subject Code:	Subject Name :MATHEMATICS-I	Ty/Lb/ ETL/IE	L	T/ SLr	P/R	С
EBMA22001	Prerequisite: Higher secondary Mathematics	Ту	3	1/0	0/0	4

UNIT I **ALGEBRA**

Binomial, Exponential, Logarithmic Series (without proof of theorems) - Problems on Summation, Approximation and Coefficients.

UNIT II MATRICES

Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values – Cayley - Hamilton theorem(without proof) – Orthogonal reduction of a symmetric matrix to Diagonal form.

UNIT III TRIGONOMETRY

Expansions of Sin n \Box , Cos n \Box in powers of Sin \Box and Cos \Box -Expansion of Tan n \Box - Expansions of Sinⁿ \Box and \cos^{n} in terms of Sines and Cosines of multiples of \Box – Hyperbolic functions – Separation into real and imaginary parts.

UNIT IV DIFFERENTIATION

Basic concepts of Differentiation -Elementary differentiation methods -Parametric functions - Implicit function -Leibnitz theorem(without proof) - Maxima and Minima - Points of inflection.

UNIT V FUNCTIONS OF SEVERAL VARIABLES

Partial derivatives – Total differential – Differentiation of implicit functions – Taylor's expansion – Maxima and Minima by Lagrange's Method of undetermined multipliers – Jacobians.

Total Number of Hours: 60

AND RESEARCH

Subject	Subject Name : ENGINEERING	Ty/Lb/	L	Τ/	P/R	С
Code	PHYSICS	ETL/IE		SLr		
EBPH22ET1	Prerequisite : Higher Sec. Physics	ETL	2	0/0	2/0	3

UNIT I PROPERTIES OF MATTER

Elasticity - stress, strain and Hook's law - Poisson's ratio - three moduli of elasticity - twisting couple on a wire – Shafts – Solid & Hollow Shafts – Bending moment – Youngs Modulus Determination by non uniform bending -I form of girders.

viscosity - flow of liquid through a narrow tube: Poiseuille's law (Qualitative)- Ostwald's viscometer – LubricationLab Component – 1. Coefficient of Viscosity determination using Poiseuille's Method.

UNIT II ACOUSTICS & ULTRASONICS

Fundamentals of acoustics - reverberation- reverberation time - factors affecting acoustics.Ultrasonics - Production of ultrasonic waves - detection of ultrasonic waves+ - acoustic grating - application of ultrasonic waves.Lab Component - 2. Ultrasonic Velocity Determination.

UNIT III WAVE OPTICS

Huygen's principle - interference of light – wave front splitting and amplitude – air wedge - Newton's rings - Michelson interferometer and its applications - Fraunhofer diffraction from a single slit - diffraction grating Lab Component – 3. Spectrometer – Grating

UNIT IV LASER

Laser principle and characteristics - amplification of light by population inversion - properties of laser beams: mono-chromaticity, coherence, directionality and brightness - different types of lasers - Ruby laser-Nd-YAG laser-He-Ne laser-CO₂ laser - semiconductor laser - applications of lasers in science, engineering and medicine.**Lab Component – 4. Determination of Wavelength of the given Laser source & Particle size determination.**

UNIT V FIBER OPTIC COMMUNICATION

Total Internal Reflection – Propagation of Light in Optical Fibers – Numerical aperture and Acceptance Angle – Types of Optical Fibers (material, refractive index, mode) – Fiber Optical Communication system (Block diagram) – Attenuation–Transmitter, Receiver, Dispersion, Modulation/Demodulation Advantages of Fiber Optical Communication System – IMT, PMT, Wavelength Modulated & Polarization Modulated Sensors – Endoscope Applications. Lab Component – 5. Determination of Numerical Aperture of Optical Fiber

TEXT BOOKS

- 1. Brijlal, M. N. Avadhanulu & N. Subrahmanyam, Text Book of Optics, S. Chand Publications, 25th edition, 2012
- 2. R. Murugeshan, Electricity and Magnetism, S.Chand Publications, 10th edition, 2017

AND RESEARCH INSTITUTE University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Periyar E.V.R. High Road, Maduravoyal, Chennai-95, Taminadu, India.

Subject Code	Subject Name: ENGINEERING CHEMISTRY	Ty/Lb/	L	Τ/	P/R	С
		ETL/IE		SLr		1
EBCH22ET1	Prerequisite : Higher Sec. Chemistry	ETL	2	0/0	2/0	3

UNIT I CHEMICAL THERMODYNAMICS

Introduction, Terminology in thermodynamics -System, Surrounding, State and Path functions, Extensive and intensive properties. Laws of thermodynamics – I and II laws-Need for the II law. Enthalpy, Entropy, Gibbs free energy, Helmholtz free energy - Spontaneity and its criteria. Maxwell relations, Gibbs -Helmholtz equation (relating E & A) and (relating H & G).

TECHNOLOGY OF WATER UNIT II

12 Hrs Water quality parameters - Definition and expression. Analysis of water - alkalinity, hardness and its determination (EDTA method only). Boiler feed water and Boiler Troubles-Scales and sludges, Caustic embrittlement, Priming and Foaming and Boiler corrosion. Water softening processes - Internal conditioning, external conditioning – Demineralization methods. Desalination processes-RO and Electrodialysis. Lab Component-1. Analyze the water quality parameters for the given water sample.

ANALYTICAL AND CHARACTERIZATION TECHNIQUES UNIT III

Chromatographic techniques - column, thin layer and paper. Instrumentation-working with block diagram-UV-Visible Spectroscopy , IR Spectroscopy , Scanning electron microscope , Transmission electron microscope. Lab Component-2.Determination of Rf values of various components using thin layer chromatography. 3. Compute and interpret the structures of the given molecules using Chem Draw.

UNIT IV ELECTROCHEMISTRY

Conductance - Types of conductance and its Measurement. Electrodes and electrode potential, Nernst equation – EMF measurement and its applications-Electrochemical series- Types of electrodes- Reference electrodes-Standard hydrogen electrode- Saturated calomel electrode-Determination of PH using these electrodes.

Lab Component-4. Studies on acid-base conductometric titration.

5. Determination of redox potentials using potentiometry

UNIT V POLYMERS AND NANO COMPOSITES

Polymers-Introduction-Monomers - Functionality - Degree of polymerization-Tacticity. Classification-Plastics – Thermoplastics and thermosetting plastics, Compounding of plastics – Compression moulding, injection moulding and extrusion processes. Nano composites: particulates, clay and carbon nano tubes. Graphene nano composites and its applications.

Lab Component-6.Polymeric analysis using capillary viscometer

Total Number of Hours: 60

Subject Name : BASIC MECHANICAL & CIVIL ENGINEERING Prerequisite : Nil

UNIT I THERMAL ENGINEERING

Subject Code

EBME22ET1

Classification of internal combustion engine – Working of two stroke, four stroke petrol and diesel engines. Classification of Boilers – Cochran boiler – Locomotive boilers – Power plant classification – Working of Thermal and Nuclear power plant- Working of Solar-Wind - Tidal and Geothermal power plants. Lab component: Study of Boilers and IC engines

AND RESEARCH

DEEMED TO BE UNIVERSITY University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Periyar E.V.R. High Road, Maduravoyal, Chennai-95. Tamilnadu, India.

UNIT II MANUFACTURING PROCESS

Metal forming processes – Rolling, forging, drawing, extrusion and sheet metal operations- fundamentals only. Metal Joining processes – Welding - arc and gas welding, Soldering and Brazing. Casting process – Patterns -Moulding tools - Types of moulding - Preparation of green sand mould -Operation of Cupola furnace. Lab component: Sheet metal works,

Fitting- Cutting (T, V, L and dovetail joints)

UNIT III MACHINING PROCESS

Basics of metal cutting operations – Working of lathe- parts-Operations performed. Drilling machine – Classification – Radial drilling machine - Twist drill nomenclature. Milling machine-types-different operations performed.

Lab component: Lathe operation: Step turning and Taper turning Drilling operation- Making hole drilling

UNIT IV BUILDING MATERIALS AND CONSTRUCTION

Materials: Brick - Types of Bricks - Test on bricks - Cement – Types, Properties and uses of cement – Steel - Properties and its uses – Ply wood and Plastics.

Construction: Mortar – Ingredients – Uses – Plastering - Types of mortar - Preparation – Uses – Concrete – Types – Grades – Uses – Curing – Introduction to Building Components (foundation to roof) – Masonry – Types of masonry (Bricks & Stones)

Lab component: Carpentry: Joints (Tee halving, Cross Lap, Dovetail Joint) Plumbing works- Pipe connections

UNIT V ROADS, RAILWAYS, BRIDGES & DAMS

Roads – Classification of roads – Components in roads – Railways -Components of permanent way and their function – Bridges – Components of bridges – Dams – Purpose of dams – Types of dams.

Total Number of Hours: 60

sit

Subject Code	Subject Name : C PROGRAMMING AND MS	Ty/Lb/	L	Τ/	P/R	С
	OFFICE TOOLS	ETL/IE		SLr		
EBCS22ET1	Prerequisite: Nil	ETL	1	0/0	2/0	2

UNIT I **INTRODUCTION**

Basic Structure of C programme- Constants, Variables and data types, Keywords, Identifiers- Operators and expressions- executing a C Program

DECISION MAKING STATEMENTS AND LOOPING STATEMENTS UNIT II 9 Hrs

Decision making with if statement, Simple if statement, else-if statement, Nesting if-else statement, The else if ladder, The switch statement, The goto statement, The while statement, The do while statement, The for statement, jumps in loops.

UNIT III **ARRAYS AND FUNCTIONS**

Introduction to Arrays- One dimensional arrays, Two dimensional array, and Multidimensional array-Introduction to Functions- calling a function, category of functions- arguments with return values, argument with no return values- parameter passing Mechanism: Call by Value and Call by Reference. Recursion.

UNIT IV **STRUCTURES & POINTERS**

Structures definition, giving values to members, Structure initialization, comparison of structure variables, Structure within structures, Understanding pointers, accessing the address of the variable, declaring and initializing pointer, accessing a variable through its pointer and arrays.

UNIT V **MS-OFFICE**

Introduction to MS-Word- Menus- Introduction to MS-Excel: features of MS- Excel, spread sheet/worksheet, parts of MS-excel window, functions in excel sheet, chart, Introduction to MS-Power point

Total Number of Hours: 45

TEXT BOOKS:

- 1. E.Balaguruswamy, Programming in ANSI C
- 2. Padma Reddy ,Computer Concepts & 'C' Programming
- 3. ShobhaHangirke, Computer Application For Business

List of Experiments: C PROGRAMMING

- 1. Find the factorial of a given positive number using function.
- 2. Calculate X raised to y using function.
- 3. Find GCD and LCM of two given integer numbers using function.
- 4. Find the sum of N natural numbers using function.
- 5. Book information using Structure.
- 6. Student information using Structure.
- 7. Print the address of a variable and its value using Pointer
- 8. Find area and perimeter of a circle
- 9. Check whether the given number is palindrome or not
- 10. Check whether the given number is prime or not
- 11.Calculate sum of the digits of the given number
- 12. Display Fibonacci series up to N terms
- 13. Check whether a given character is alphabetic, numeric or special character
- 14.Count vowels and consonants in a given string
- 15. Find product of two matrices

36

9 Hrs

9 Hrs

9 Hrs

MS-OFFICE

Preparing a news letter:

- 16. To prepare a newsletter with borders, two columns text, header and footer and inserting a graphic image and page layout.
- 17.Creating and editing the table
- 18.Printing envelopes and mail merge.
- 19.Using formulas and functions: To prepare a Worksheet showing the monthly sales of a company in different branch offices
- 20.Prepare a Statement for displaying Result of 10 students in 5 subjects

CHARACTERISTICS OF A SUCCESSFUL ENTREPRENEUR UNIT I

Subject Name : ORIENTATION

TO ENTREPRENEURSHIP &

PROJECT LAB

Introduction to entrepreneurship education - Myths about entrepreneurship - How has entrepreneurship changed the country – Dream it. Do it - Idea planes - Some success stories – Global Legends – Identify your own heroes.

UNIT II **ENTREPRENEURIAL STYLE**

Entrepreneurial styles - Introduction, concept & Different types - Barrier to Communication - Body language speaks louder than words

UNIT III **DESIGN THINKING**

Introduction to Design thinking – Myth busters – Design thinking Process - Customer profiling – Wowing your customer – Personal selling – concept & process – show & tell concept – Introduction to the concept of **Elevator Pitch**

UNIT IV RISK MANAGEMENT

Introduction to risk taking & Resilience - Managing risks (Learning from failures, Myth Buster) -Understanding risks through risk takers – Why do I do? – what do I do?

UNIT V PROJECT

Subject Code

How to choose a topic – basic skill sets necessary to take up a project – creating a prototype – Pitch your project – Project presentation.

IDEA GENERATION, EVALUATION & amp; PROJECT PRESENTATION 15Hrs

ND RESEA

Subject Code:	Subject Name : MATHEMATICS-II	Ty/Lb/ ETL/IE	L	T/ SLr	P/R	C
EBMA22003	Prerequisite: Higher secondary Mathematics	Ту	3	1/0	0/0	4

UNIT I **INTEGRATION**

Basic concepts of Integration – Methods of Integration– Integration by substitution – Integration by parts – Definite integrals- Properties of definite integrals - Problems on finding Area and Volume using single integrals (simple problems).

UNIT II **MULTIPLE INTEGRALS**

Double integral in Cartesian and Polar Co-ordinates - Change of order of integration - Triple integral in Cartesian Co-ordinates - Spherical Polar Co-ordinates - Change of variables (simple problems).

ORDINARY DIFFERENTIAL EQUATIONS UNIT III

First order differential equations - Second and higher order linear differential equations with constant coefficients and with RHS of the form: e^{ax} , x^n , Sin ax, Cos ax, $e^{ax}f(x)$, x f(x) where f(x) is Sin bx or Cos bx – Differential equations with variable coefficients (Euler's form) (simple problems).

THREE DIMENSIONAL ANALYTICAL GEOMETRY UNIT IV

Direction Cosines and Ratios - Equation of a straight line - Angle between two lines - Equation of a plane -Co-planar lines – Shortest distance between skew lines – Sphere – Tangent plane.

UNIT V **VECTOR CALCULUS**

Scalar and Vector functions - Differentiation - Gradient, Divergence and Curl - Directional derivatives -Irrotational and Solenoidal fields- Line, Surface and Volume integrals - Green's, Stoke's and Gauss divergence theorems (statement only) – Verification.

UNIT I **CRYSTAL STRUCTURE**

Space Lattice – Unit cell – Bravais lattice – Lattice planes – Miller indices – Calculation of number of atoms per unit cell - Atomic radius - Coordination number - Packing factor for SC, BCC, FCC and HCP structures - Ceramic Materials & Graphite Structures - Crystal Growth Techniques (Slow Evaporation Method & Melt Growth)

CONDUCTORS & SUPER CONDUCTORS UNIT II

Qualitative analysis of Free electron theory – Electrical & Thermal Conductivity (Derivation) - Fermi energy & its importance - Qualitative analysis of conductors, semiconductors & insulators - Important electrical materials. Superconductors - Transition temperature - BCS theory - Properties of super conductors - Types -Low & High temperature superconductors - AC & DC Josephson effect - SQUIDS, Magnetic Levitation -Applications of super conductors

SEMICONDUCTOR PHYSICS UNIT III

Bonds in Semiconductors - Types - Importance of Germanium & Silicon - Other Commonly Used Semiconducting materials - Carrier concentration in Intrinsic Semiconductors (Electron and Hole Density) -Band Gap Determination - Carrier Transport in Semiconductors - Drift, Mobility and Diffusion - Hall effect - Determination of Hall Coefficient and its Applications - Dilute Magnetic Semiconductors (DMS) & their Applications construction, working and characteristics of semiconductor diode, Zener diode, transistor (n-p-n and p-n-p transistor), Transistor characteristics (CB, CE, CC), JFET (Construction and its characteristics).

MAGNETIC & DIELECTRIC PHYSICS UNIT IV

Magnetic Materials: Types – Comparison of Dia, Para and Ferro Magnetism – Heisenberg's interpretation – Domain theory – Hysteresis – Soft and Hard Magnetic Materials – Application of Magnetic Resonance Imaging – Important Magnetic, Insulating & Ferro electric materials.

Dielectric Materials: Electrical Susceptibility - Dielectric Constant - Concept of Polarization - Frequency and Temperature Dependence of Polarization - Dielectric loss - Dielectric breakdown - Commonly used Dielectric materials and their practical applications.

OPTO ELECTRONICS UNIT V

Properties & Classification of Optical Materials - Absorption in Metals, Insulators & Semiconductors -Composite Materials – Nano Materials – Bio Materials – MEMS – NEMS – LED's – Organic LED's – LCD's - Laser diodes - Photodetectors - Tunneling - Resonant Tunneling Diodes (RTD's) - Carbon Nanotubes - Various Ttypes of Optical Materials with Properties.

Total Number of Hours: 45

semiconductors-Intrinsic-Extrensic semiconductors -Mobility of electrons and Holes -Fermi level in Semiconductors- Industrial application of Semiconductors-Semiconductors in Optics - LEDs, OLEDs, Semiconductors in solar cells- Types - First generation solar cells - Single crystalline and poly crystalline solar cells -Czochralski Process of single crystalline silicon synthesis

Semiconductors - Introduction - holes and electrons-Band theory-properties of semi conductors-Types of

UNIT II ELECTROCHEMICAL CELLS AND BATTERY TECHNOLOGY 9 Hrs

Electrochemical cells: Galvanic cell (Daniel cell);Batteries: Classification of batteries, primary batteries (dry cells) and secondary batteries -nickel-cadmium ,lead-acid battery, Solid state batteries - Lithium battery, Lithium Sulphur battery, Fuel cells.

UNIT III DEVICECORROSION

UNIT I

Introduction - chemistry of IC and PCB- causes of corrosion on IC, PC-miniaturization, complex material utilization, production and service factors --environmental contamination (airborne contaminants) - Forms of corrosion - anodic, cathodic corrosion- Electrical Contact and metallic joints degradation- fretting corrosion corrosion costs - corrosion protection of computer hardware.

UNIT IV **COMPUTATIONAL CHEMISTRY**

CHEMISTRY OF SEMICONDUCTORS

Introduction, Software tools available for chemistry and its applications, Chem Draw- Designing a Chemical Structure- Shortcuts and Hotkeys on designing a chemical structure, Biopolymer Drawing, Advanced drawing Techniques. Structure Analysis, Creating 3D Models, Estimating and displaying Proton and carbon-13 NMR chemical shifts, Creating TLC Plates to find Rf values, Chem Draw/Excel functions.

UNIT V MODERN ENGINEERING MATERIALS FOR ELECTRONIC DEVICES 9 Hrs

Alloys and Need for Alloys - Modern Electronic grade alloys-Applications in electrical components, transducers, electromagnetic shielding of computers, telecommunications equipment and rocket motor casings. Thin films- Preparation by the Sol-Gel Method-Application of thin films.

Total Number of Hours: 45

PROJECTION OF SOLIDS

Projection of simple solids like prism, pyramid, cylinder and cone in simple position Sectioning of above solids in simple vertical position by cutting plane inclined to any one of the reference plane and perpendicular to the other.

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true

Introduction to drawing, importance and areas of applications – BIS standards – IS: 10711 – 2001 : Technical products Documentation - Size and layout of drawing sheets - IS 9606 - 2001: Technical products Documentation – Lettering – IS 10714 & SP 46 – 2003: Dimensioning of Technical Drawings – IS : 15021 – 2001 : Technical drawings - Projections Methods - drawing Instruments, Lettering Practice - Line types and dimensioning – Border lines, lines title blocks Construction of polygons – conic sections – Ellipse, Parabola,

UNIT III **DEVELOPMMENT OF SURFACES**

GRAPHICS

Prerequisite : Nil

CONCEPTS AND CONVENTIONS (Not for examination)

EBME22001

Hyperbola and cycloids.

UNIT I

UNIT II

Development of lateral surfaces of simple and truncated solids – prisms, pyramids, cylinders, and cones.

PROJECTION OF POINTS, LINES AND PLANE SURFACES

inclinations – projection of polygonal surface and circular lamina in simple position only.

UNIT IV ISOMETRIC PROJECTION 9 Hrs Principles of isometric projection - isometric scale - isometric projections of simple solids, like prisms pyramids, cylinders and cones.

UNIT V **ORTHOGRAPHICS PROJECTIONS**

Orthographic projection of simple machine parts – missing views

BUILDING DRAWING

Building components – front, Top and sectional view of a security shed. (Basic Auto CAD commands to be taught- not for Examinations)

Total Number of Hours: 60

Note: First angle projection to be followed. **TEXT BOOKS**

	Electrical Concepts					

UNIT I **BASIC CIRCUIT CONCEPTS**

V-I Relationships Of R, L And C – Independent Sources – Dependent Sources – Kirchhoff's Laws - Simple Resistive Circuits - Network Reduction - Voltage Division - Current Division - Source Transformation. Formation of Matrix Equations and Analysis Using Mesh-Current and Node-Voltage Methods.

AC FUNDAMENTALS UNIT II

AC Quantity, Phasor Representation - Analysis Of Simple Series And Parallel Circuits - Power And Power Factor – Analysis Mesh Current And Node Voltage Methods – Series Resonance And Parallel Resonance

NETWORK THEOREM AND DUALITY UNIT III

Useful Circuit Analysis techniques - Linearity and superposition, Thevenin and Norton Equivalent Circuits, Maximum Power Transfer, Super position theorem –principle of duality.

UNIT IV TRANSIENT ANALYSIS

Transient Concepts-Behavior Of Circuit Elements Under Switching Conditions and Their Representation-Forced and Free Response of RL, RC And RLC Circuits with D.C. And Sinusoidal Excitations Using Laplace Transform Method – Natural Frequency and Damping Factor.

UNIT V **COUPLED CIRCUITS AND TOPOLOGY**

Mutual Inductance – Coefficient Of Coupling – Ideal Transformer – Single & Double Tuned Circuits – An introduction to Network Topology, Trees and General Nodal analysis

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT I LISTENING

Authentic audios and videos

Prescribed Book: English Pronunciation in use - Mark Hancock,

SPEAKING UNIT II

Individual- Solo: Self introduction, Describing, anchoring, welcome address, vote of thanks, Pair & Group: Role play- formal -informal, narrating stories, film review, analysing newspaper headings and reports, interpreting Advertisement pamphlets

Group discussion, mock interviews, formal presentation, power point presentation

Prescribed Book: J. C. Richards with J. Hull &S.Proctor, Interchange, Cambridge University Press, 2015.

UNIT III READING

Extensive, focused reading, Strategies for effective reading - Reading comprehensions - Note making- summarising- paraphrasing, Review

Suggested reading: Short stories, news paper reports, film reviews

UNIT IV WRITING

Extensive writing practices – note taking, Cognitive and metacognitive strategies to inculcate a sense of organising ideas into coherent sentences and paragraphs, Formal letters, Business letters. Resume with covering letter

UNIT V NON VERBAL COMMUNICATION/ CHARTS, DIAGRAMS AND TABLE 6 Hrs

Interpretation of charts Flow chart, pie chart, bar diagram, table, tree diagram, etc.,

Total Number of Hours: 30

PRESCRIBED TEXT:

1. J. C. Richards with J. Hull &S.Proctor, Interchange, Level 2, Cambridge University Press, 2021.

University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) iyar E.V.R. High Road, Maduravoyal, Chennai-95. Tamilnadu, India.

Subject Code	Subject Name : PYTHON	Ty / Lb/	L	T / SLr	P/ R	С
	PROGRAMMING	ETL/IE				
EBCS22ET2	Prerequisite: C Programming and Ms	ETL	1	0/0	2/0	2
	Office Tools					

UNIT I INTRODUCTION

History of Python, Need of Python Programming, Applications Basics of Python Programming Using the REPL(Shell), Running Python Scripts, Variables, Assignment, Keywords, Input-Output, Indentation.

UNIT II TYPES, OPERATORS AND EXPRESSIONS

Types - Integers, Strings, Booleans; Operators- Arithmetic Operators, Comparison (Relational) Operators, Assignment Operators, Logical Operators, Bitwise Operators, Membership Operators, Identity Operators, Expressions and order of evaluations Control Flow- if, if-elif-else, for, while, break, continue, pass.

UNIT III FUNCTIONS

Defining Functions, Calling Functions, Passing Arguments, Keyword Arguments, Default Arguments, Variable-length arguments, Anonymous Functions, Fruitful Functions (Function Returning Values), Scope of the Variables in a Function - Global and Local Variables.

UNIT IV LISTS, TUPLES, DICTIONARIES

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

UNIT V OBJECT ORIENTED PROGRAMMING OOP IN PYTHON

Classes, 'self variable', Methods, Constructor Method, Inheritance, Overriding Methods, Data hiding.

Total Number of Hours: 45

TEXT BOOKS:

- 1. Python Programming: A Modern Approach, VamsiKurama, Pearson.
- 2. Think Python:How to Think Like a Computer Scientist'', 2nd editionUpdated for Python 3, Shroff/O'Reilly Publishers,Allen B. Downey
- 3. Learning Python, Mark Lutz, Orielly.

REFERENCE BOOKS:

- 1. Core Python Programming, W.Chun, Pearson.
- 2. Introduction to Python, Kenneth A. Lambert, Cengage.

List of Experiment : Python Programming.

- 1. Develop a python program to find the area and circumference of a circle.
- 2. Develop a python program to check if the number is positive or negative or zero using nested if else statement.
- 3. Develop a python program to find the GCD(Greatest Common Divisor) of two numbers.
- 4. Develop a Python program using function to compute the factorial of a given number.
- 5. Develop a Python program to find the sum of square of individual digits of a number using function.
- 6. Develop a Python program to find the largest digit from a number using function.
- 7. Develop a Python program to display only the positive elements of the list.
- 8. Develop a Python program to accept any number and print it in words.
- 9. Develop a Python program to subtract two matrices.
- 10. Develop a Python program to perform matrix multiplication.

AND RESEARC

NSTITUTE

Subject Code:	Subject Name: ENVIRONMENTAL SCIENCE	Ty / Lb/ ETL/IE	L	T/SLr	P/R	С
EBCC22I03	Prerequisite: Nil	Audit Course-IE	1	0/0	1/0	0

ENVIRONMENT AND ECOSYSTEM UNIT I

Definition, Scope and Importance of environment - need for public awareness - concept, structure and function of an ecosystem- producers, consumers and decomposers - energy flow in the ecosystem. Biodiversity at national and local levels - India

ENVIRONMENT POLLUTION UNIT II

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Nuclear hazards (g) E-Wastes and causes, effects and control measures

UNIT III NATURAL RESOURCES

Forest resources: Use and over-exploitation, deforestation. Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems. Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems.

SOCIAL ISSUES AND THE ENVIRONMENT UNIT IV

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management - resettlement and rehabilitation of people; its problems and concerns climate change, global warming, acid rain, ozone layer depletion, nuclear accidents, central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT

Population growth, variation among nations – population explosion, environment and human health – human rights - value education - HIV/AIDS - women and child welfare - role of information technology in environment and human health

(A) AWARENESS ACTIVITIES

i) small group meetings about water management, promotion of recycle use, generation of less waste, avoiding electricity waste

ii) Slogan making event

- iii) Poster making event
- iv) Cycle rally

v) Lectures from experts

(B) ACTUAL ACTIVITIES:

i) Plantation

- ii) Gifting a tree to see its full growth
- iii) Cleanliness drive
- iv) Drive for segregation of waste
- v) To live some big environmentalist for a week or so to understand his work
- vi) To work in kitchen garden for mess
- vii) To know about the different varieties of plants
- viii) Shutting down the fans and ACs of the campus for an hour or so

Total Number of Hours: 30

D.C MACHINES UNIT I

Introduction - Constructional Features- Motor and Generator mode - EMF and Torque equation - Starting and Speed Control-Testing And Efficiency – Losses in DC Machines -Brushless DC Motors- Universal Motor – Stepper Motor - Servo Motor - Tachogenerator - Linear Induction Motor

UNIT II TRANSFORMERS

Introduction - Ideal and Practical Transformer - EMF Equation - Phasor diagram- Per Unit System -Equivalent circuit- Testing- - Losses and Efficiency - Voltage Regulation - Three Phase Transformers - Auto Transformers, Advantages- Harmonics.

UNIT III AC ROTATING MACHINES

Principle of operation of three-phase induction motors – Construction – Types – Single phase Induction motors -Construction- Types-starting methods. Alternator: Working principle-Equation of induced EMF Synchronous motors- working principle-starting methods – Torque equation.

UNIT IV MEASUREMENTS USING ELECTRICAL INSTRUMENTS

Functional elements of an instrument-Standards and calibration- Operating Principle -types - Moving Coil and Moving Iron meters-Measurement of three phase power -Energy Meter- Instrument Transformers-CT and PT-DSO- Block diagram- Data acquisition

UNIT V MEASUREMENTS USING ELECTRONIC INSTRUMENTS

Electronic Instruments: CRO: -Measurements of Voltage & Frequency, Function generator:- Frequency Measurements in Various Range and Wave Form : Power Supply: -Fixed and Variable :Multi-meter:-Measurement of Voltage, Current, Frequency, R,L,C : IC tester:-Linear ICs and Non Linear ICs Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

CATIONAL AND RESEARCH INSTITUTE DEEMED TO BE UNIVERSITY University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Periyar E.V.R. High Road, Maduravoyal, Chennai-95. Tamilnadu, India. EDUCAT

Subject Code:	Subject Name: SIGNALS AND SYSTEMS	Ty / Lb/	L	Τ/	P/R	С
		ETL/IE		SLr		
EBEC22002	Prerequisite: Mathematics I & II	Ту	3	1/0	0/0	4

CLASSIFICATION OF SIGNALS AND SYSTEMS UNIT I

Continuous Time Signals (CT signals), Discrete Time Signals (DT Signals) -Standard signals Step, Ramp, Pulse, Impulse, Exponential, and Sinusoids, Operations on signals . Classification of CT and DT signals -Periodic and aperiodic, Deterministic and Random signals, Energy & Power signals, Classification of Systems -CT Systems and DT Systems -Linear & Nonlinear, Time-variant & Time-invariant, Causal & Noncausal, Stable & Unstable - Linear Time Invariant Systems(LTI).

UNIT II ANALYSIS OF C.T SIGNALS

12 Hrs Fourier Series Analysis, Trigonometric Fourier Series and Exponential Fourier Series -Dirichlet's conditions -Spectrum of C.T. Signals, Fourier Transform and Laplace Transform - Properties of Fourier Transform -Inverse Laplace Transform - Applications in Signal Analysis.

UNIT III LTI – CT SYSTEMS

Differential Equation, Block Diagram Representation, Impulse Response, Step Response, Convolution Integral, Frequency Response, Concept of Region of Convergence (ROC) for Laplace Transforms, Properties of L.T., Relation between L.T and F.T of a signal - Fourier and Laplace Transforms in Signal Analysis, State Equations and Matrix.

UNIT IV **ANALYSIS OF D.T. SIGNALS**

Spectrum of D.T. Signals, Discrete Time Fourier Transform (DTFT), Discrete Fourier Transform (DFT), Properties of DFT, Properties of Z – Transform in Signal Analysis, Inverse Z-Transform.

UNIT V LTI – DT SYSTEMS

12 Hrs Difference Equations, Block Diagram Representation, Impulse Response, Finite impulse response (FIR) and Infinite impulse response (IIR) Convolution, Frequency Response, Z - Transform Analysis, Realization of Digital Filters - Direct Form-I, Direct Form-II, Transposed, Parallel, Cascade Structure, State Variable Equation and Matrix.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

Subject	Subject Name : DIGITAL ELECTRONICS	T y/ Lb/	L	T/SLr	P/R	С	l
Code:		ETL/IE					l
EBEC22003	Prerequisite: None	Ту	3	1/0	0/0	4	1

UNIT I DIGITAL FUNDAMENTALS

Number Systems – Decimal, Binary, Octal, Hexadecimal, 1 s and 2 s complements, Codes –Binary, BCD, Excess 3, Gray, Alphanumeric codes, Boolean theorems, Logic gates, Universal gates, Sum of products and product of sums, Minterms and Maxterms, Minimization using Karnaugh map, and Quine-McCluskey method.

UNIT II COMBINATIONAL LOGIC

Design of Combinational Logic Circuits – Half adder – Full adder, Half Subtractor,Full Subtractor–Binary parallel adder-Carry lookahead adder-BCD adder– Code Converters – Multiplexer – Demultiplexer- Encoder – Decoder – Magnitude comparator

UNIT III SYNCHRONOUS SEQUENTIAL CIRCUITS

Flip flops – SR, JK, T, D, Master/Slave FF – operation and excitation tables, Triggering of FF, – Design - Moore/Mealy models, state minimization, state assignment,State Reduction techniques- Design of Counters-Ring Counters, Shift registers, analysis of clocked sequential circuits.

UNIT IV ASYNCHRONOUS SEQUENTIAL CIRCUITS

Design of asynchronous sequential circutis-Stable and Unstable states, output specifications, cycles and races, state reduction, race free assignments, Hazards, Essential Hazards, Design of Hazard free circuits.

UNIT V LOGIC FAMILIES

Basic memory structure – ROM -PROM – EPROM – EEPROM –EAPROM, RAM – Static and dynamic RAM - Programmable Logic Devices – Programmable Logic Array (PLA) -Programmable Array Logic (PAL) – Field Programmable Gate Arrays (FPGA) – Implementation of combinational logic circuits using PLA, PAL.Digital logoc families, propagation delay, power dissipation, fan-out and fan-in, noise margin, logic families and their characteristics- TTL, ECL, CMOS-Operation and its Characteristics.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Subject Code: Ty /Lb/ Subject Name : C++ AND JAVA PROGRAMMING ETL EBCS22ID2 **Prerequisite: C Programming and MS Office** Ty Tools

UNIT I **INTRODUCTION TO C++**

Programming Paradigms - Key Concepts of OOP - Advantages of OOP - Usage of OOP - Evolution of C++ -Input and Output in C++-Streams-Stream classes-Keywords, Identifiers, Variables, Operators, Expressions and Control Structures: If, If. Else, Switch - Repetitive Statements- for, while, do...while - arrays

UNIT II **CLASSES, INHERITANCE & TEMPLATES**

Main Function - Parts of function - Parameters Passing in Functions - Function Overloading - Constructors and Destructors- types -Operator Overloading - Inheritance - Pointers - Virtual Functions and Polymorphism

UNIT III **INTRODUCTION TO JAVA**

Introduction to Java : Basics of Java programming- Data types- Variables -Operators -Control structures Decision making- Looping control- Math class-string class-Arrays in java

UNIT IV FILE AND EXCEPTION HANDLING

File handling in java- Character stream – Java File class methods – File operations –Exception handling-Exceptions Methods-Catch-throw-Finally

DATASTRUCTURES USING JAVA UNIT V

Array-One Dimensional - Two Dimensional-Linked list-Single-Doubly-circular- Stack- Queue- Trees – Graphs

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

Subject Code:	Subject Name: UNIVERSAL HUMAN VALUES 2: UNDERSTANDING HARMONY	Ty / Lb/ ETL/IE	L	T/ SLr	P/R	С
EBCC22ET1	Prerequisite: None	ETL	1	0/0	2/0	2

UNIT I **INTRODUCTION - NEED, BASIC GUIDELINES, CONTENT AND PROCESS** 9 Hrs FOR VALUE EDUCATION

Purpose and motivation for the course, recapitulation from Universal Human Values-I. - Self-Explorationwhat is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-Continuous Happiness and Prosperity- A look at basic Human Aspirations exploration. -Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority.- Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario - Method to fulfil the above human aspirations: understanding and living in harmony at various levels.

Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking.

UNIT II UNDERSTANDING HARMONY IN THE HUMAN BEING - HARMONY IN 9 Hrs **MYSELF!**

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. - Understanding the needs of Self ('I') and 'Body' - happiness and physical facility.- Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer). - Understanding the characteristics and activities of 'I' and harmony in 'I'. - Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. - Programs to ensure Sanyam and Health.

Include practice sessions to discuss the role others have played in making material goods available tome. Identifying from one's own life.

Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease

UNIT III UNDERSTANDING HARMONY IN THE FAMILY AND SOCIETY- HARMONY 9 Hrs **IN HUMAN-HUMAN RELATIONSHIP**

Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship - Understanding the meaning of Trust; Difference between intention and competence - Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship - Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals -Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family.

Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives.

UNIT IV UNDERSTANDING HARMONY IN THE NATURE AND EXISTENCE WHOLE 9 Hrs **EXISTENCE AS COEXISTENCE**

Understanding the harmony in the Nature - Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self-regulation in nature. - Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. - Holistic perception of harmony at all levels of existence.

Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

UNIT V IMPLICATIONS OF THE ABOVE HOLISTIC UNDERSTANDING OF 9 Hrs HARMONY ON PROFESSIONAL ETHICS

Natural acceptance of human values - Definitiveness of Ethical Human Conduct - Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order

Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. -

Case studies of typical holistic technologies, management models and production systems - Strategy for transition from the present state to Universal Human Order: (a) At the level of individual: as socially and ecologically responsible engineers, technologists and managers, (b) At the level of society: as mutually enriching institutions and organizations

Sum up. Include practice Exercises and Case Studies will be taken up in Practice (tutorial) Sessions e.g. To discuss the conduct as an engineer or scientist etc.

Total Number of Hours: 45

TEXT BOOK

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010

Subject Code:	Subject Name : C++ AND JAVA PROGRAMMING LAB	Ty /Lb/ ETL/IE	L	T/SLr	P/R	С
EBCS22IL1	Prerequisite: C Programming and MS Office Tools	Lb	0	0/0	3/0	1

LIST OF EXPERIMENTS USING C++

- 1. Program to check whether the given number is palindrome or not
- 2. Program to search an element in a given list
- 3. Program to find factorial of a given number using recursion
- 4. Program to demonstrate call by value, call by address and call by reference.
- 5. Program to demonstrate function overloading.
- 6. Program to demonstrate Constructor Destructor program
- 7. Program to demonstrate the concept of different inheritance

LIST OF EXPERIMENTS USING JAVA

- 1. Write a Java program that prompts the user for an integer and then prints out all the prime numbers up to that Integer
- 2. Write a java program to find the Fibonacci series using recursive and non recursive functions.
- 3. Write a Java program to add two given matrices
- 4. Write a Java program to demonstrate I/O streams
- 5. Write a Java program to demonstrate class and methods
- 6. Write a Java program that reads on file name from the user, then displays information about whether the file exists, whether the file is readable, whether the file is writable, the type of file and the length of the file in bytes
- 7. Write a Java program to implement the concept of exception handling

AND RESEARC

NSTITUTE

Subject	Subject Name : ANALYSIS OF SOLID	Ty / Lb/	L	Τ/	P/R	С
Code:	STATE DEVICES	ETL/IE		SLr		
EBEC22ET1	Prerequisite: None	ETL	2	0/0	2/0	3

UNIT I SEMICONDUCTOR DIODE

Theory of PN Junction Diode – VI characteristics – Static and Dynamic Resistance – Effect of Temperature on Diodes - Space Charge and Diffusion Capacitance - Zener Diode - Avalanche and Zener Break Down Mechanisms - Zener Diode as a Voltage Regulator.

Experiments: Characteristics of P-N Junction & Zener Diode

UNIT II BJT & BIASING

Principles of Transistor Action - Current Components - Cut Off, Active & Saturation Region - I/P& O/P characteristics CE, CB and CC. Small Signal Large Signal '\beta', Break Down & Switching Characteristics - Transistor Biasing - Bias Stabilization - Bias Compensation - Thermal Runaway - Design with Heat Sink. Experiments: I/P & O/P Characteristics of BJT

UNIT III **FET& MOSFET**

Construction Feature & Working Principles of JFET, MOSFET Depletion and Enhancement Mode, Biasing of FET, and MOSFETS, Transmission Gate using CMOS.

Experiments: Characteristics of JFET, MOSFET Characteristics

UNIT IV POWER DEVICES

Charge Transfer Device, UJT, SCR, Diac, Triac, GTO, MCT and Introduction to Gallium Arsenide Devices, FinFET, LDR, Photo Voltaic cell, Varactor diode. **Experiments: Characteristics of SCR and UJT**

UNIT V SMALL SIGNAL MODEL

Small Signal Model of Transistor- Analysis of Amplifiers using Small Signal Model. Common Emitter, Common Base, Common Collector, Common Source, Common Drain, Common Gate, Multistage Amplifiers. Experiments: Analysis of BJT in CB,CE and CC Configuration

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Subject Code	Subject Name : PROBABILITY AND RANDOM PROCESS	Ty/Lb/ ETL/IE	L	T/ SLr	P/R	С
EBMA22010	Prerequisite: Mathematics I & II	Ту	3	1/0	0/0	4

UNIT I RANDOM VARIABLES

Baye's Theorem – Applications – Random Variables – Distribution functions – Moments – Moment Generating functions – Chebychev's Inequality (Statement and Applications only) – Function of Random Variables.

UNIT II STANDARD DISTRIBUTIONS

Marginal and Conditional Distributions – Applications of Discrete Distributions: Binomial – Poisson – Geometric – Applications of Continuous distributions: Uniform – Exponential– Normal distributions – Central Limit theorem (Statement and Applications only).

UNIT III RANDOM PROCESS

Stationary Process – Ergodic Process – Poisson Process – Applications: Birth and Death Process – Markov Process – Markov Chains.

UNIT IV CORRELATION

Auto Correlation – Auto Covariance – Cross Correlation – Cross Covariance.

UNIT V LINEAR SYSTEMS - APPLICATIONS

Spectral Density – Cross Spectral Density – Applications to Linear Systems with Random Inputs and Outputs.

**REGULATEDPOWER SUPPLIES** 

Subject Name: ELECTRONIC CIRCUITS

**Prerequisite: Analysis of Solid State Devices** 

Linear mode power supply - Rectifiers: Half-wave rectifier - Full-wave rectifier - Bridge rectifier - Filters: L, C, LC and CLC filter - Voltage regulators - series and shunt - Over load protection - Switched mode power supply (SMPS) –IC voltage regulators.

AND RESEARCH

DEEMED TO BE UNIVERSITY University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Perlyar E.V.R. High Road, Maduravoyal, Chennal-95. Tamlinadu, India.

#### UNIT II FEEDBACK AMPLIFIERS

Basic concept of feedback - Gain with feedback - Feedback factor - General characteristics of negative feedback amplifiers - Effect of negative feedback on input and output resistance; topologies of feedback amplifiers - Analysis of series-shunt, series-series, shunt-series and shunt-shunt feedback amplifiers - Nyquist criterion for stability of feedback amplifiers - Gain and phase margin.

#### UNIT III **OSCILLATORS**

Subject

UNIT I

**EBEC22004** 

Code:

Classification of Oscillators - Barkhausen criterion for oscillation - RC phase shift, Wien bridge and Twin-T oscillator - General form of LC oscillator - Hartley, Colpitts and Clapp oscillator - Ring oscillators - Crystal oscillators - Equivalent circuit of crystal - Miller and Pierce crystal oscillator - Frequency stability of oscillator.

#### UNIT IV WAVE SHAPING AND MULTIVIBRATOR CIRCUITS

RC differentiator and integrator - Diode clippers and clampers - Multivibrators - Collector-coupled astable multivibrator, monostable multivibrator and bistable multivibrator - Triggering methods for bistable multivibrators - Schmitt trigger - UJT relaxation oscillator.

#### UNIT V POWER AMPLIFIERS AND TUNED AMPLIFIERS

BJT Power amplifiers - Class A - Class A - Class AB - Class C - MOSFET Power amplifiers - Tuned amplifiers- Q of tank circuits- Single tuned amplifier-Frequency response - Double tuned amplifier - Effect of cascading single tuned and double tuned amplifiers on bandwidth - Stagger tuned amplifiers - Comparison of tuned amplifiers .

## Practical component P: Include case studies / application scenarios

## Research component R: Future trends / research areas / Comparative Analysis

AND RESEARCH

University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Periyar E.V.R. High Road, Maduravoyal, Chennai-95, Taminadu, India.

INSTITUTE

#### UNIT I SYSTEM REPRESENTATION & STATE SPACE ANALYSIS

Control Systems – Basic elements in control systems – Open and Closed loop systems – Mathematical models of physical systems – Transfer function – Block diagram reduction techniques – Signal flow graph- Concepts of state variables -Solution of state equations- Conversion of transfer function to state space model.

#### UNIT II TIME RESPONSE

Standard Test Signals-Time Domain study of first order and second order feedback control systems -Time domain Specifications - I and II order System Response - Error Coefficients - Generalized Error Series -Steady State Error

#### UNIT III **FREQUENCY RESPONSE**

Frequency Domain Specifications -Correlation between Frequency Domain and Time Domain Specifications-Bode plot - Polar plot - Introduction to Closed Loop Frequency Response- Constant M and N circles -Nichols chart (Qualitative approach)

#### UNIT IV STABILITY OF CONTROL SYSTEM

Characteristics Equation - Location of Roots in S plane for stability - Routh Hurwitz Criterion - Root Locus Construction - Effect of Pole, Zero Addition - Gain Margin and Phase Margin - Nyquist Stability Criterion-Concept of Controllability & Observability.

#### UNIT V **COMPENSATORS AND CONTROLLERS**

Compensator-Types -Lag, Lead and Lag-Lead Compensators (Qualitative approach)- Controllers -Need -Types-P, I, D – Effect of PI, PD and PID controller- Intelligent controllers (Case Study)

#### Practical component P: Include case studies / application scenarios Research component R: Future trends / research areas / Comparative Analysis

Subject Code:	Subject Name : LINEAR INTEGRATED CIRCUITS	Ty / Lb/ ETL/IE	L	T/S Lr	P/ R	С
EBEC22006	Prerequisite: Analysis of Solid State Devices, Digital Electronics	Ту	3	0	0	3

#### UNIT I INTRODUCTION TO INTEGRATED CIRCUITS

Integrated circuit and its classification, Introduction to Operational amplifier-General operational amplifier stages-Internal circuit diagram of IC 741, Ideal Op-Amp , DC & AC Characteristics, Slew rate and methods of improving slew rate, CMRR, PSRR, Frequency Response and Compensation techniques

#### UNIT II APPLICATIONS OF OPAMP IC741

Scale changer, Voltage follower, Inverting and Non-Inverting amplifiers ,V-to-I and I-to-V converters, Summer and Subtractor – Multiplier and Divider – Differentiator and Integrator – Instrumentation Amplifier, Op- Amp Circuits using Diodes, Precision Rectifier – Clipper and Clamper – Sample and Hold Circuit – Log and Antilog Amplifiers.RC Active filters-low pass and High pass-Band pass and Band reject-Switched capacitor and Butterworth filters

### UNIT III COMPARATORS AND SIGNAL GENERATORS

applications of Comparators – Regenerative Comparators (Schmitt Trigger) – Sine wave generator, Square Wave Generator (Astable Multivibrator) – Monostable Multivibrator –Triangular Wave Generator – Saw Tooth Wave Generator – IC 555 Timer

#### UNIT IV ANALOG MULTIPLIER AND PLL

Analog Multiplier using Emitter Coupled Transistor Pair – Gilbert Multiplier cell – Variable transconductance technique, analog multiplier ICs and their applications, PLL Basic Principles, Monolithic PLL IC 565, Functional blocks of PLL-Phase Detector -Comparator-Analog and Digital Voltage Controlled Oscillator, Applications of PLL-AM detection-FM detection-FSK modulation and demodulation-Frequency synthesizing

#### UNIT V IC REGULATORS AND DATA CONVERTERS

IC voltage regulators: Introduction, Fixed voltage regulators, SMPS, current limiting and current feedback techniques using IC723.DA converters- DAC Specifications -Weighted resistor type,R-2R Ladder type, A/D converters-ADC Specifications --Counter ramp type, Successive Approximation, Dual slope, Flash type, High Speed A/D Converters.

ND RESEA

NSTITUTE

#### UNIT I INTRODUCTION TO COMMUNICATION SYSTEMS AND NOISE

Basic Communication Systems - Need for Modulation in Communication Systems - Noise - Sources of Noise - Types of Noise - External Noise - Thermal Agitation - Shot Noise - Noise Figure - Signal to Noise Ratio -Equivalent Noise Resistance, Amplitude Modulation and demodulation- Frequency Spectrum - power relations in Amplitude Modulation.

#### **CONTINUOUS MODULATION SYSTEMS** UNIT II

Balanced Modulator, DSB - SC, SSB and VSB - Modulation and Demodulation - AM Transmitter, Receiver-Types, AM receivers.

#### UNIT III ANGLE MODULATION

Frequency modulation – Mathematical representation of FM – Frequency Spectrum – Phase Modulation – Noise triangle - Pre-emphasis, de- emphasis- Comparison of Wide band and Narrow band FM, AFC -Stereophonic FM multiplex system – Generation of FM - FM receivers - Communication receivers.

#### ANALOG TO DIGITAL CONVERSION **UNIT IV**

Sampling Theorem - PAM- Quantization of signal - Quantization Error - PWM, PPM - Introduction to digital modulation systems - ASK, FSK, PSK - Transmitter and receiver.

#### UNIT V **INFORMATION THEORY AND CODING**

Introduction - Information - Entropy - Information rate, Classification of codes, Kraft McMillan inequality --Source coding theorem - Shannon, Fano coding - Huffman coding, Joint and conditional entropies-Channel capacity -- Mutual information.

## UNIT I

6 Hrs

Historical background: TKS during the pre- colonial and colonial period, Indian traditional knowledge system

<b>UNIT II</b> Traditional medicine, traditional production and construction technology	6 Hrs
<b>UNIT III</b> History of physics and chemistry, traditional art and architecture and vastushashtra, astronomy and astrology	6 Hrs
<b>UNIT IV</b> Origin of mathematics, aviation technology in ancient India, crafts and trade in ancient India	6 Hrs
<b>UNIT V</b> TKS and the contemporary world, tks and the Indian union, tks and it revolution.	6 Hrs
Total Number of Hou	ma. 20

#### **Total Number of Hours: 30**

#### **TEXT BOOKS:**

- 1. Amit Jha (2009), Traditional knowledge system in india, 1st Edition, Delhi University (North Campus)
- 2. Dr.A.K.Ghosh (2011), Traditional Knowledge of Household Products

#### LIST OF EXPERIMENTS

- 1. Measure input bias current; input offset current and input offset voltage of the given op-amp
- 3. Design voltage follower circuit and measure Slew Rate & CMRR
- 4. Design an inverting and non-inverting amplifier for required gain using Ic741
- 5. Design and realize adder and subtractor using IC741
- 6. Design integrator and differentiator using IC741
- 7. Design Schmitt trigger using ic741 for given values of UTP & LTP
- 8. Design Monostable multivibrator for required pulse width using IC741.
- 9. Design Astable multivibrator for required frequency and duty cycle using ic741
- 10.Design & obtain frequency response of first order HPF & LPF filters using P-SPICE
- 11.Calculate line, load regulation for a voltage regulator using IC723 using P-SPICE
- 12.Construct a 4-bit R-2R ladder type DAC using P-SPICE

13.Set up a 4-bit successive approximation type ADC and study its performance using P-SPICE

EBEC22I01	Prerequisite: None	IE	0	0/0	2/0	1

Students should acquire skill in the domain/inter disciplinary area from government/private training centers/industries /University for a minimum period of 15 calendar days. The training can be through off line, online or mixed mode. Students are supposed to prepare Technical skill report at the end of the training and submit the report along with the certificate in proof of the training, during the viva voce examination conducted by the examiners duly appointed by the head of the department.

#### **UNIT I**

Creation of awareness of top companies / improving skill set matrix / Development of positive frame of mind / Creation of self-awareness.

### UNIT II

Group discussions / Do's and don'ts - handling group discussions / what evaluators look for interpersonal relationships / Preparation of Curriculum Vitae / Resume.

### **UNIT III**

Interview - awareness of facing questions - Do's and don'ts of personal interview / group interview, enabling students to prepare for different proce3dures such as HR interviews and Technical Interviews / self-introductions.

#### **UNIT IV**

Verbal aptitude, Reading comprehension / narration / presentation / Mock Interviews.

#### UNIT V

Practical session on Group Discussion and written tests on vocabulary and reading comprehension

#### Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

#### UNIT I **DATA COMMUNICATION**

**Prerequisite:** None

**NETWORKS** 

Introduction, Basic concepts, OSI Reference Model, Transmission of Digital Data -Electrical Interface, Modems-Transmission rate-modem standards-Guided Media-Twisted –pair Cable-Coaxial cable-Performance- Error Detection and Correction (CRC) - Time and Frequency domains Signals

#### UNIT II DATA LINK CONTROL AND PROTOCOLS

Subject Name : COMMUNICATION

Flow Control and Error Control, Stop And Wait - Sliding Windows- Automatic Repeat (ARQ), Asynchronous Protocols - X Modem, Y Modem, Synchronous Protocols - Character Oriented and Bit Oriented Protocols (HDLC).

#### UNIT III LOCAL AREA NETWORKS

IEEE 802 Standards, LLC, MAC Layer Protocols -CSMA/CD Ethernet, Token Bus, Token Ring, FDDI, Distributed Queue Dual Bus, Switched Multimegabit Data Service

#### UNIT IV WIDE AREA NETWORKS

Switching, Duties of the Transport Layer, ATM Protocol -Architecture Header Structure, Function of AAL Layer, Internetworking Devices, Repeater, Bridge, Routers and Gateways, Routing Algorithms- Link Stateand Distance Vector routing.

#### UNIT V **UPPER OSI LAYERS**

Session Layer - Presentation Layer - Translation, Brief Introduction to Encryption / Decryption, Authentication -Data Compression, Application Layer Protocols, MHS, File Transfer , Virtual Terminal, Common Management Information Protocol.

#### THE 8086 MICROPROCESSOR UNIT I

EDUCAT

Introduction To 8085 Micro Processor 8086 architecture- functional diagram, Register organization, memory segmentation, Signal descriptions of 8086-common function signals, minimum mode and maximum mode system design, timing diagrams, Interrupts of 8086.

#### **INSTRUCTION SET AND ASSEMBLY LANGUAGE PROGRAMMING OF 8086** 9 Hrs UNIT II

Instruction formats, Addressing modes, instruction set, assembler directives. Macros, Simple programs involving Arithmetic, logical, branch and call instructions. Sorting, evaluating arithmetic expressions, string manipulations

#### UNIT III PERIPHERALS AND INTERFACING

Programmable Peripheral Interface (8255), Serial Communication Interface (8251), Keyboard display controller (8279), Programmable Interval Timer/counter (8254), Programmable interrupt controller (8259), DMA controller(8257), ADC and DAC Interface.

#### **8051 MICROCONTROLLER** UNIT IV

Comparison between Microprocessor and Microcontroller, 8051 - Architecture, Instruction set, Addressing modes, Assembly language programming, I/O Ports, Timers / counters, serial communication, Interrupt, Special Function Registers (SFRs).

#### UNIT V MICROCONTROLLER BASED SYSTEM DESIGN

Interfacing High power devices-Stepper Motor, DC Motor speed Control using PWM, RTC and EEPROM interface using I2C protocol, Traffic Light Interface, Interfacing matrix Keyboard and (16x2) LCD interfacing

# Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

#### **Total Number of Hours: 45**

#### **TEXT BOOKS:**

AND RESEARCH INSTITUTE

#### **DFT AND FFT** UNIT I

Discrete Fourier Transform (DFT) - Properties-Convolution of Sequences - Linear Convolution - Circular Convolution - Introduction to Radix-2 FFT- Properties - DIT (FFT)-DIF (FFT) - Algorithms of Radix-2FFT-Computing Inverse DFT by doing a direct DFT.

#### **DESIGN OF IIR FILTER UNIT II**

FDUCATIONAL

IIR Filters- Properties of IIR Filters - Analog Low pass Filter Design - Butterworth Filter - Chebyshev Filter - Design of IIR Filters from Analog filters - Approximation of Derivatives - Impulse Invariance - Bilinear Transformation - The Matched z- Transformation - Frequency Transformation.

#### UNIT III **DESIGN OF FIR FILTER**

FIR Filters - Characteristics of FIR Filters with Linear Phase-Properties of FIR Filters-Design of FIR Filters using Windows-Fourier Series Method-Frequency sampling Method

#### FINITE WORD LENGTH EFFECTS **UNIT IV**

Fixed point and floating-point number representations - Comparison - Truncation and Rounding errors -Ouantization noise - derivation for quantization noise power - coefficient quantization error - Product quantization error - Overflow error Limit cycle oscillations- Zero- Input Limit cycle oscillations- Overflow Limit cycle oscillations- Signal Scaling.

#### UNIT V **OVERVIEW OF DIGITAL SIGNAL PROCESSOR**

Overview of Digital Signal Processors - Application of Digital Signal Processor - Memory Architecture of DSP Processor - Von Neumann Architecture - Harvard Architecture - Architecture of TMS32C5X Processor – Addressing modes – Pipelining.

## Practical component P : Include case studies / application scenarios

#### Research component R : Future trends / research areas / Comparative Analysis

#### **Total Number of Hours: 60**

## **TEXTBOOKS**:

- 1. John . G. Proakis and Dimitris C.Manolakis, "Digital Signal Processing Principles, Algorithms and Applications", Pearson Education, Third edition 2006.
- 2. Sanjit k.Mitra "Digital signal processing", A Computer Based Approach, Tata McGraw Hill, New delhi,2001.
- 3. A.V.Oppenheim, R.W. Schafer and J.R. Buck, "Discrete Time Signal Processing", 8th Indian reprint, Pearson 2004.

#### **REFERENCE BOOKS:**

- 1. Ashok Ambardar, "Analog and Digital Signal Processing", 2nd Edition, Thomson Learning 2000.
- 2. Ashok Ambardar, "Analog and Digital Signal Processing A Modern Introduction", 1st edition Thomson Learning 2006

Subject	Subject Name ONLINE COURSE	Ty /Lb/	L	T/SL	P/R	C
Code:		ETL/IE		r		
EBOL22I01	Prerequisite: None	IE	1	0/0	1/0	1

Students should register for the online course with a minimum course duration of 4 weeks through the online portals such as NPTEL/SWAYAM/Any MOOC in the beginning of the semester. A mentor will be assigned by the department for monitoring the students.

Students are expected to attend the online classes regularly and submit the weekly assignments before the due dates. Students should appear for the online examination and submit the certificate at the end of the semester .Internal Examination will be conducted by the examiners duly appointed by the head of the department.

#### LIST OF EXPERIMENTS

#### **Using NS2/OPNET**

- 1. Simulate Three Nodes Point-To-Point Networks With A Duplex Link Between Them. Set The Queue Size And Vary The Bandwidth And Find The Number Of Packets Dropped.
- Apply Tcp Agent Between N0 To N3 And Udp N1 To N3. Apply Relevant Applications Over Tcp And Udp Agents Changing The Parameters And Determine The Number Of Packets Sent By Tcp/Udp.
- 3. Simulate The Different Type Of Internet Traffic Such As Ftp And Telnet Over A Network And Analyze The Throughput.
- 4. Simulate A Transmission Of Ping Message Over A Network Topology Consisting Of 6 Nodes And Find The Number Of Packets Dropped Due To Congestion.
- 5. Simulate An Ethernet Lan Using N Nodes Change Error Rate And Data Rate And Compare The Throughput.
- 6. Simulate An Ethernet Lan Using N Nodes And Set Multiple Traffic Nodes And Determine The Collision Across Different Nodes.
- 7. Simulate An Ethernet Lan Using N Nodes And Set Multiple Traffic Nodes And Plot Congestion Window For Different Source/Destination

Using C/C++

- 1. Write A Program For Error Detecting Code Using Crc-Ccitt (16bit)
- 2. Write A Program For Distance Vector Algorithm To Find Suitable Path For Transmission
- 3. Write A Program For Simple Rsa Algorithm To Encrypt And Decrypt The Data
- 4. Write A Program For Hamming Code Generation For Error Detection/Correction

### LIST OF EXERCISES USING 8085/8086 Kits:

1. Basic Arithmetic, Logical operations and move a data block without overlap.

### LIST OF EXERCISES USING 8086 kits / MASM

- 2. Decimal Arithmetic, Code conversion, and Matrix operations.
- 3. String manipulations.
- 4. Sorting and Searching

### PERIPHERALS AND INTERFACING EXPERIMENTS

- Traffic light control 5.
- Stepper motor control 6.
- 7. Key board and Display
- 8. Serial interface
- 9. Parallel interface
- 10. A/D and D/A interface and Waveform Generation

### LIST OF EXERCISES USING 8051 kits

- 11. Basic Arithmetic, Logical operations, Square and Cube program
- 12. Find 2s complement of a number
- 13. Conversion of packed BCD to unpacked BCD

Students should acquire skill in the domain/inter disciplinary area from government/private training centers/industries /University for a minimum period of 15 calendar days. The training can be through off line, online or mixed mode. Students are supposed to prepare Technical skill report at the end of the training and submit the report along with the certificate in proof of the training, during the viva voce examination conducted by the examiners duly appointed by the head of the department.

Subject	Code:	Subject Name : FIELD AND WAVE ELECTROMAGNETICS	TY Lb/ ETL/IE	L	T/SL r	P/R	С	
EBEC22	ET2	Prerequisite: Mathematics II, Solid State Physics	ETL	2	0/0	2/0	3	

AND RESEARCH INSTITUTE

#### UNIT I **ELECTROMAGNETICS**

EDUCATION

Introduction to Electrostatics and Magnetostatics-Fundamental Laws- Boundary Conditions- Analogy between the parameters-Divergence and Curl Equations-Maxwell's Equations - Poynting Vector and Theorem.

### Experiments: Octave Simulation of Laplace Equations, Transmission Line Analysis Using Virtual Neywork Analyser.

### UNIT II TRANSMISSION LINES

Introduction-Wave Equations of Lossless Lines- Finite Difference Method-Laplace's equations and Telegrapher's Equations-Octave Simulation.

Experiments: Octave Simulation of Wave Equations and Telegrapher's Equations.

#### UNIT III LOSSY TRANSMISSION LINES

Transmission Lines with Losses-Reflections and Reflection Coefficient -Voltage Reflection Coefficient and Standing Wave Ratio - Graphical Representation of Reflection Coefficient - Impedance Matching using Smith Chart - Impedance Matching Demonstration using VNA - Octave Simulation.

Experiments: Octave Simulation of Transmission Lines with Losses, Octave Simulation of **Electromagnetic Wave Equations.** 

#### UNIT IV POLARISATION

Polarisation of Electromagnetic Waves - Electromagnetic Waves in Conducting Media - Plane Waves-Plane Waves at normal incidence - Plane Waves at oblique incidence -Perpendicular Polarisation-Dielectric Conductor Interface-Octave Simulation.

Experiments: Octave Simulation of Different Types of Polarisation, Octave Simulation of Perpendicular Polarisation.

#### UNIT V WAVEGUIDES

Parallel Plate Waveguide- Rectangular Waveguide-Phase Velocity and Group Velocity-Modes and Field Pattern in Waveguides - Cavity Resonators- Octave Simulation-Real Time Applications.

Experiments: Octave Simulation of Rectangular Waveguide Modes, Octave Simulation of a Parallel Plate Waveguide.

Practical component P : Include case studies / application scenarios Research component R : Future trends / research areas / Comparative Analysis

**Total Number of Hours: 60**

### UNIT I INTRODUCTION TO ROBOTICS

ROBOTICS

Engineering

Subject Name : SENSORS AND

Prerequisite: Basic Mechanical & Civil

**Engineering**, Electrical and Instrumentation

Robot - Definition - Law of Robotics - Robot Anatomy - Co ordinate Systems- Robot Classification- Wrist configuration-Technical Specifications of Robot - Robot Parts and their Functions-Need for Robots-Different Applications.

### **UNIT II ROBOT DRIVES AND POWER TRANSMISSION SYSTEMS**

Robot drive mechanisms- hydraulic - electric -pneumatic drives- servomotor- stepper motor- Mechanical transmission method - Gear transmission - Rotary-to-Rotary motion conversion, Rotary-to-Linear motion conversion.

### **UNIT III** MANIPULATORS AND END EFFECTORS

Construction of Manipulators- Electronic and Pneumatic manipulators-Classification of End effectors -Tools as end effectors -Mechanical grippers- -Magnetic grippers-Vacuum grippers-hydraulic grippers -Gripper force analysis

### UNIT IV **BASICS OF SENSOR**

Sensor definition- Sensor Systems - Sensor Characteristics- - Sensor Classification-Types of sensors -Transducer and actuators

### UNIT V **APPLICATION OF SENSORS**

Mechanical sensors- Temperature sensor- pressure sensor- optical sensors- proximity sensors-biosensors-Role of sensors in robotics and automation.

### Practical component P : Include case studies / application scenarios Research component R : Future trends / research areas / Comparative Analysis

	Probability and Random Process						ĺ

#### UNIT I DETECTION, ESTIMATION AND SAMPLING PROCESS

Model of Digital Communication System, Gram Schmidt Orthogonalization Procedure, Matched Filters, Correlation Receivers, Error Probability, Maximum Likelihood Estimation, Linear Prediction and Prediction Filters, Sampling Theorem, Quadrature Sampling of Band-Pass Signals, Reconstruction of a message from its samples

#### WAVEFORM CODING TECHNIQUES AND BASEBAND SHAPING UNIT II

PCM and TDMA Principles, Channel Noise and Error Probability, Quantization Noise and SNR. Differential Pulse Code Modulation and Delta Modulation, Speech Coding at Low Bit Rates, Power Spectra of PAM Signals, Inter Symbol Interference, Nyquist Criterion for distortionless baseband transmission, Correlative Coding and Precoding, Eye Patterns and Equalization Techniques.

#### UNIT III **DIGITAL MODULATION SCHEME**

Geometric Representation of signals – Generation, detection, PSD & BER of Coherent BPSK, BFSK & QPSK – QAM – Carrier Synchronization – Structure of Non-coherent Receivers – Principle of DPSK.

### UNIT IV **ERROR CONTROL CODING**

Need for Coding, Types of Codes, Hamming codes, Linear Block Codes, Cyclic Codes, Convolution Codes, Maximum, Likelihood Decoding of convolutional Codes, Distance Properties and Sequential Decoding of convolutional Codes, Trellis coding, Viterbi coding.

#### UNIT V SPREAD SPECTRUM SYSTEMS

Generation of Pseudo Noise Sequences, Correlation Properties, Direct Sequence Spread Spectrum Systems, Frequency Hop System, Signal Space Dimension and Processing Gain, Probability of Error, Antijam and Multipath Performance.

### Practical component P: Include case studies / application scenarios Research component R: Future trends / research areas / Comparative Analysis

## **Total Number of Hours: 60**

ND RESEARCH

INSTITUTE

UNIT I **DIGITAL IMAGE FUNDAMENTALS**

Need for DIP- Fundamental steps in DIP – Elements of visual perception -Image sensing and Acquisition -Image Sampling and Quantization - Relationships between pixels - Color image fundamentals - RGB, HSI models

IMAGE TRANSFORMS & IMAGE COMPRESSION UNIT II

Two dimensional Fourier Transform- Properties - Fast Fourier Transform - Inverse FFT Discrete cosine transform and KL transform. Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, JPEG standard, MPEG.

IMAGE ENHANCEMENT UNIT III

Spatial Domain: Basic Gray level Transformations - Histogram Processing - Basics of Spatial Filtering-Smoothing and Sharpening Spatial Filtering, Frequency Domain: Smoothing frequency domain filterssharpening frequency domain filters- Homomorphic filtering

UNIT IV **IMAGE RESTORATION & SEGMENTATION**

Overview of Degradation models –Unconstrained and constrained restorations-Inverse Filtering- Wiener Filter - Feature Extraction Detection of discontinuities - Edge linking and Boundary detection-Thresholding--Edge based segmentation-Region based Segmentation-- Use of motion in segmentation.

UNIT V **APPLICATIONS**

Pattern, Signature, Character Recognition- Texture and Shape Analysis- Biometric and Biomedical Image Processing-Remote Sensing Applications.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 60

EBEC22I03	Prerequisite:None	IE	0	0/0	2/0	1

Students should acquire skill in the domain/inter disciplinary area from government/private training centers/industries /University for a minimum period of 15 calendar days. The training can be through off line, online or mixed mode. Students are supposed to prepare Technical skill report at the end of the training and submit the report along with the certificate in proof of the training, during the viva voce examination conducted by the examiners duly appointed by the head of the department.

Subject Code:	Subject Name : MINI PROJECT /	TY/Lb/	L	T/S	P/R	С
	INTERNSHIP	ETL/IE		Lr		
EBEC22I04	Prerequisite: Core Courses	IE	0	0	3/0	1

MINI PROJECT:

Students will have an opportunity to expose their knowledge and talent to make an innovative project. Students are supposed to do innovative projects useful to industries/society in the area of relevant Engineering, inter and multi-disciplinary areas, under the guidance of a staff member. They have to prepare a project report and submit to the department.

At the end of the semester Viva-Voce examination will be conducted by the internal Examiner duly appointed by the Head of the department and the students will be evaluated.

INTERNSHIP:

Students are supposed to undergo internship in related Industries for a minimum period of 30 days cumulatively during the semester. They have to prepare a report on the Internship with a certificate in proof from competent authority in the industry. At the end of the semester Viva-Voce examination will be conducted by the Examiners duly appointed by the Head of the department and the students will be evaluated.

EBEC22014	Prerequisite: Transmission Lines and	Ту	3	0/0	0/0	3
	Waveguides, Antenna and Wave					
	Propagation					

UNIT I MICROWAVE PASSIVE DEVICES

Transmission Lines for use at Microwave Frequencies - Attenuators, Directional Couplers, Terminators, Phase Shifters, Faraday Rotation Isolators and Circulators, Field Displacement Isolators, Microwave Filters, Frequency Meters, Hybrid Junctions - Scattering Analysis.

Limitations of Conventional Tubes at Very High Frequencies - Velocity - Modulated Tubes, Two -

MICROWAVE GENERATOR UNIT II

Cavity Klystron Amplifiers, Reflex Klystron Oscillators - Periodic Slow Wave Structures and their Use in Travelling Wave Tube Amplifiers, Focusing Techniques, TWTA Performance Characteristics - Electron Motion in Crossed Electric and Magnetic Fields - Magnetron Oscillators, Hartree Equation Rieke Diagram and Performance Charts.

Varactor Diodes, Manley - Rowe Relations, Low Noise Parametric Amplifiers - Transferred -

MICROWAVE SOLID-STATE DEVICES UNIT III

Electron Devices and Their Operation, Cavity - Controlled Modes, LSA Mode-Avalanche - Transit Time Devices and Their Operation, TRAPATT Mode, BARITT mode, PIN Diodes and Their use as Attenuators and Switches.

Slotted - Line Techniques - Measurements of Wavelength - Measurement of Low and High VSWR -

UNIT IV MICROWAVE MEASUREMENTS

Measurement of Frequency and Frequency Meters - Measurement of Insertion Loss and Attenuation by Substitution Methods - Measurement of Low and High Powers at Microwave Frequencies -Modern Measurement Techniques using Automatic Network Analyzer and Spectrum Analyzer.

OPTICAL FIBER, LOSSES AND DESIGN UNIT V

The General System - Evolution of Fiber Optical System - Elements of an Optical FiberTransmission Link – Cylindrical Fiber – Single Mode Fibers and Multimode Fibers - Fiber Splicingand Connectors. Absorption Losses, Scattering Losses - Bending Losses - Core and Cladding Losses- Signal Distortion in SM Fibers - Point to Point Links - System Design Consideration - Link PowerBudget - Rise Time Budget

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

AND RESEARCH

Subject	Subject Name :VLSI DESIGN	TY/Lb/	L	T/SL	P/R	С
Code:		ETL/IE		r		
EBEC22015	Prerequisite: : Analysis of Solid State Devices,	TY	3	0/0	0/0	3
	Digital Electronics					

UNIT I MOS TRANSISTOR THEORY

EDUCATION

Introduction - NMOS and PMOS transistor, Threshold voltage, Body effect, MOS device - Basic DC equations ,Second order effects, MOS models, Small signal AC characteristics, Complementary CMOS Inverter, Power dissipation and scaling of MOS transistors.

UNIT II **DESIGNING COMBINATIONAL LOGIC CIRCUITS**

Static CMOS design - Complementary CMOS, Propagation Delay and Power Consumption in static CMOS, Pseudo NMOS Logic, Pass Transistor Logic, Transmission gates, Dynamic CMOS Design - Basic principle, Speed and Power dissipation of Dynamic logic, Signal integrity issues in dynamic design, CMOS Domino logic, np CMOS logic.

UNIT III **DESIGNING SEQUENTIAL LOGIC CIRCUITS**

Introduction – Timing metrics for sequential circuits, Classification of memory elements, Static latches and registers – The bi-stability principle, Multiplexer based latch, Master slave edge triggered register, Static SR flip flop, Dynamic latches and registers – Dynamic transmission gate edge triggered registers, clocked CMOS register.

UNIT IV **VHDL PROGRAMMING**

VHDL background - VHDL requirement, Elements of VHDL- Importance of HDL- typical design flowoperators, Basic concepts in VHDL, Structural modeling, Behavioral modeling and Dataflow modeling in VHDL and Simple programs-VHDL code for half adder and full adders, half and full subtractors, multiplexers, demultiplexers, decoders, encoders, 2-bt comparator, shift registers.

UNIT V **VERILOG PROGRAMMING**

Verilog HDL - Basic concepts and popularity of Verilog HDL - Verilog requirements, Gate Level modeling, Dataflow modeling and Behavioral modeling - Simple programs -Verilog code for half adder and full adder, half and full subtractor, multiplexers, demultiplexers, decoders, encoders, 2-bt comparator, shift registers.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

UNIT I 68HC11 AND 8051 MICROCONTROLLER

Microcontroller

Embedded Computer systems: - Applications, Software issues, Memory Mapped Architecture, 68HC11 Architecture and Different Addressing Modes, Study of Intel 8051 Microcontroller Architecture and Instruction Set

AND RESEARC

DEEMED TO BE UNIVERSITY University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Perlyar E.V.R. High Road, Maduravoyal, Chennal-95. Tamlinadu, India.

Subject Name : EMBEDDED SYSTEMS

Prerequisite: Microprocessor and

UNIT II PIC MICROCONTROLLER

EDUCAT

Subject

EBEC22016

Code:

Introduction - PIC16F877 Micro controller overview - Architecture of PIC Micro Controllers - Pipelining -Program Memory considerations - Register File Structure- I/O Ports and Timers .

PROGRAMMING AND INTERFACING UNIT III

Programming of PIC Micro Controllers- Instruction Set of PIC Micro Controllers, Simple Assembly language and C Program for PIC Microcontroller, Capture/ Compare and PWM module, Serial communication module, Analog module interfacing

UNIT IV **INTERUPPTS AND PERIPHERALS**

68HC11 Interrupt system- Interrupts Polled Versus Vectored Interrupts -Assembler Directives -Serial Communication - UART -A/D Converter Module-Pulse Width Modulation - 6811 Timing Generation and Measurements: MC6811 Input Capture, Output Compare, Square Wave Generation Frequency Measurements.

UNIT V **I/O DEVICES AND INTERFACING**

Serial I/O devices: RS232 Specifications, Communication Protocols, MC6811 SCI ad SPI. Parallel port Interfaces: Input Switches and Keyboard, output LED, Stepper Motor. Memory Interfacing: Address Switching, Memory Interface, examples for MC6H16, Introduction to High speed I/O Interfacing.

Practical component P: Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

UNIT I WIRELESS LANS AND PANS

Introduction - FUNDAMENTALS OF WLANS- Technical Issues - Differences Between Wireless and Wired Transmission, Use of WLANs, Design Goals- Network Architecture - Infrastructure Based Versus Ad Hoc LANs, Components in a TypicalIEEE802.11 Network, Services Offered by a TypicalIEEE802.11 Network- IEEE802.11 STANDARD- Physical Layer, Basic MAC Layer Mechanisms- HIPERLAN standard-Bluetooth

UNIT II AD HOC WIRELESS NETWORKS

INTRODUCTION - Cellular and Ad Hoc Wireless Networks - definition, characteristics features, Applications of Ad Hoc Wireless Networks- Issues in ad hoc wireless networks - Ad Hoc wireless internet.

UNIT III MEDIUM ACCESS PROTOCOLS

MAC Protocols: design issues, Design goals of a MAC protocol For Ad Hoc wireless networksand classification of MAC protocols -Contention based protocols- with reservation, with scheduling mechanisms, protocols using directional antennas. IEEE standards: 802.11a, 802.11b, 802.11g, 802.15, 802.16.

UNIT IV **NETWORK PROTOCOLS**

Routing Protocols: Design issues, goals and classification of Routing Protocols - Proactive Vs reactive routing, Table-driven routing protocols: Destination sequence Distance – Vector routing Protocol, wireless Routing Protocol - On-demand routing protocols: Dynamic source Routing protocol, Ad Hoc on Demand Distance - vector Routing protocol - Hybrid Routing protocol : Core extraction distributed Ad Hoc routing protocol, Zone routing protocol - Power-aware routing protocols: Power – aware routing metrics.

UNIT V WIRELESS SENSOR NETWORKS

Introduction - Sensor Network Architecture - Data Dissemination - Data Gathering - MACPROTOCOLS for Sensor Networks - Location Discovery - Quality of a Sensor Network

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 60

EBEC22I05	Prerequisite: Core Courses	IE	0	0/0	3/3	2

Students are expected to do the Project in a group of 3 to 4 students. They should identify the area/topic of the Project and should collect the literatures related to the project. Students intending to do Industrial projects will approach the industries with the support of the university, identify the industrial problem and finalize the project. In case of Industrial projects apart from Industry guide, a guide has to be appointed by the department. At the end of the Semester the students should submit their Project Phase - I report to the Department and Viva -Voce examination will be conducted by the examiners duly appointed by the Head of the department.

EBFL22IXX	Prerequisite: None	IE	1	0/0	1/0	1

Foreign language is introduced in the curriculum to make the students globally employable. Students should select and register for any one of the foreign languages from the given list. At the end of the course students should be able to read, write and converse the language in the basic level. At the end of the semester the assessment will be done through internal examination by the examiner duly appointed by the head of the department.

EBCC22ID2	Prerequisite:None	TY	3	0/0	0/0	3

UNIT I **INTRODUCTION**

Definition of Management - Science or Art - Manager Vs Entrepreneur - types of managers - managerial roles and responsibilities – Evolution of Management –need and Importance of Organizational Behavior, Leadership styles - Theories - Leaders Vs Managers.

UNIT II PLANNING & ORGANISING

Nature and purpose of planning - planning process - types of planning - Planning premises objectives hierarchy of objectives, Management By Objectives (MBO)- Decision making process. Nature and purpose of Formal and informal organization structure- types - Line and staff authority- delegation of authority - centralization and decentralization.

UNIT III STAFFING AND COORDINATING

Human Resource Planning, Job Analysis, Recruitment, Selection, Training and Development, Performance Management, Career planning. Coordination -Nature and purpose - Coordination at various levels: Top management, Middle management, Supervisory management and workers. Techniques for effective coordination

UNIT IV DIRECTING AND CONTROLING

Direction: Principles of direction - Need and Importance for directing, process of controlling - budgetary and non-budgetary control techniques – use of technology. Recent Trends in Management controlling.

UNIT V **GROUP BEHAVIOUR AND MOTIVATION**

Group Dynamics - How Groups Work, Stages of Group Development, Team building, Motivation -Theories of motivation Organizational Conflict - Causes - Types of Conflicts, Managing conflicts.

Total Number of Hours: 45

		ETL/IE				
EBEC22L13	Prerequisite: Project Phase I	Lb	0	0/0	12/12	8

To make the students to make use of the knowledge and skill developed during their four years of study and to apply them for making an innovative product/process for the development of society and industries.

Students are expected to do a Project work either in an Industry or at the University in the field of relevant Engineering /inter-disciplinary /multi-disciplinary area in a group of 3 or 4 students. The work to be carried out in Phase II should be continuation of Phase I. Each group will be allotted a guide based on the area of Project work. In case of industrial Project external guide has to be allotted from Industry. Inter disciplinary/multi-disciplinary project can be done with students of different disciplines as a group. Monthly reviews will be conducted during the semester to monitor the progress of the project by the project review committee. Students have to submit the Project thesis at the end of the semester and appear for the Project Viva-Voce examination conducted by the examiners duly appointed by the Controller of Examination. In case of industrial project certificate in proof has to be included in the report along with the bonofide certificate.

UNIT I EMBEDDED SYSTEM FUNDAMENTALS

EDUCAT

Complex systems and microprocessors- Embedded system design process -Designexample: Model train controller- Design methodologies- Design flows - RequirementAnalysis - Specifications-System analysis and architecture design – Quality Assurancetechniques - Designing with computing platforms – consumer electronics architecture -platform-level performance analysis.

UNIT II SURVEY OF SOFTWARE ARCHITECTURES

Round -robin, Round-robin with interrupts, queues. Function- scheduling architecture, Real time operating system architecture, Scheduling architecture.

UNIT III ELEMENTS OF REAL TIME OPERATING SYSTEMS

Structure of a Real Time System — Estimating program run times – Task Assignment and Scheduling – Fault Tolerance Techniques – Reliability, Evaluation – Clock SynchronisationTasks & Task states, Tasks & data, Semaphores & shares data, Message Queues, Mailboxes and Pipes, Timer functions, Events, Memory management and Interrupt Routines in an RTOS environment.

UNIT -IV BASIC DESIGN USING REAL-TIME OPERATING SYSTEMS

Principles, encapsulating semaphores & queues, hard real-time scheduling considerations, saving memory space, saving power.

UNIT V **EMBEDDED TOOLS**

Embedded software development tools- host and target machines, linker/locators for embedded software, getting embedded software into the target system. Debugging techniques- testing on host system, instruction set simulators, the assert, macro using laboratory tools.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT I INT	RODUCTION TO PLC					9 Hrs

INTRODUCTION TO PLC UNIT I

Role of automation in Industries - benefits of automation - Necessity of PLC - History and Evolution of PLC – Definition, types, selection criterion – Overall PLC system – PLC Input andOutput modules – CPU, programmers and monitors, power supplies - Solid state memory

UNIT II **PROGRAMMING OF PLC**

Programming equipment, Various techniques of programming, Ladder diagram fundamentals ,proper construction of ladder diagram, basic components and their symbols in ladder diagram, Basics of PLC Programming: Processor Memory Organization, Program Scan, PLC Programming Languages, Relay-Type Instructions, Instruction Addressing, Branch Instructions, Internal Relay Instructions, Programming Examine If Closed and Examine If Open Instructions, Entering the Ladder Diagram, Modes of operation

UNIT III COMPUTER CONTROLLED TEST SYSTEM

Programmable Logic Controllers: Introduction, Parts of a PLC, Principles of Operation, architecture, PLCs versus Computers, PLC Size and Application.PLC Hardware Components: The I/O Section, Discrete I/O Modules, Analog I/O Modules, Special I/O Modules, I/O Specifications, The Central Processing Unit (CPU), Memory Design, Memory Types, Programming Terminal Devices, Recording and Retrieving Data, Human Machine Interfaces (HMIs). Definition of discrete state process control, PLC Vs PC, PLC Vs DCS, relay diagram, ladder diagram, ladder diagram examples, relay sequencers, timers/counters, high speed counter, PLC design, study of at least one industrial PLC. 9 Hrs

UNIT IV SCADA FUNDAMENTALS

Introduction, Open system: Need and advantages, Building blocks of SCADA systems, Remote terminal unit (RTU): Evolution of RTUs, Components of RTU, Communication subsystem, Logic subsystem, Termination subsystem, Testing and human-machine interface (HMI) subsystem, Power supplies, Advanced RTU functionalities. Intelligent electronic devices (IEDs).

UNIT V APPLICATIONS OF PLC

9 Hrs Developing Fundamental PLC Wiring Diagrams and Ladder Logic Programs: Electromagnetic Control Relays, Contactors, Motor Starters, Manually Operated Switches, Mechanically Operated Switches, Sensors, Output Control Devices, Seal-in Circuits, Latching Relays, Converting Relay Schematics into PLC Ladder Programs, Measurement of temperature, flow, pressure, force, displacement, speed, level Developing a ladder logic for Sequencing of motors, Tank level control, ON OFF temperature control, elevator, bottle filling plant, car parking Motors Controls

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

TEXTBOOKS:

UNIT I ANTENNA BASICS

Antenna Parameters - Gain, Directivity, Effective Aperture Polarization, Beam width, Balun, Ground System, Top loading, monopole and Half wave dipole antenna, Short linear antenna, Beam solid angle, Antenna Temperature.

9 Hrs **RADIATION PRINCIPLE AND ANTENNA TERMINOLOGIES** UNIT II

Principle of Radiation, pattern, Antenna Terminologies - Reciprocity Theorem, Friss Formula, Slot Antennas, SWR (Standing Wave Radiators)

UNIT III ANTENNA ARRAYS

Arrays - Two Element Arrays - Uniform Linear Array - Broadside Array - End fire array - Principle of Pattern Multiplication - Binomial Arrays.

UNIT IV SPECIAL ANTENNA

Dish Antenna – Helical Antenna, Biconical Antenna, Microstip Patch Antenna, Turnstile Antenna, Yagi – uda antenna, Loop Antenna, Antenna Low and Medium Frequencies.

UNIT V WAVE PROPAGATION

Wave Propagation - Surface Wave Propagation, Structure of the Ionosphere, Space Wave Propagation-Determination of Critical Frequencies - Maximum Usable Frequency - Effect of Earth's Magnetic Field -Fading - Super Refraction - Scatter Propagation.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

TEXTBOOKS:

Traffic Engineering

Network Traffic load and parameters, Grade of service and blocking probability, Modeling Switching Systems, Incoming Traffic and Service Time Characterization, Blocking Models and Loss Estimates, Delay systems.

UNIT IV Telephone Networks

Subscriber Loop Systems, Switching Hierarchy and Routing, Transmission Plan, Transmission Systems, Numbering Plan, Charging Plan, Signaling Techniques, In channel signaling, common channel signaling, Cellular mobile telephony.

UNIT V Data Networks

EPABX system – block diagram, working – Data transmission in PSTN, data rates in PSTNs – ISO – OSI reference model – Motivation for ISDN – Networks and protocol architecture, ISDN standards, broadband ISDN, voice data integration.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

Subject Code:	Subject Name : AUDIO SIGNAL	Ty / Lb/	L	T/SLr	P/R	С	l
	PROCESSING	ETL/IE					
EBEC22E06	Prerequisite: Signals and Systems, Digital	Ту	3	0/0	0/0	3	l
	Signal processing						

UNIT I **MECHANICS OF SPEECH AND AUDIO**

Introduction - Review Of Signal Processing Theory-Speech production mechanism - Nature of Speech signal – Discrete time modeling of Speech production – Classification of Speech sounds – Phones – Phonemes - Phonetic and Phonemic alphabets - Articulatory features. Absolute Threshold of Hearing -Critical Bands- Simultaneous Masking, Masking-Asymmetry, and the Spread of Masking- Non simultaneous Masking - Perceptual Entropy - Basic measuringphilosophy -Subjective versus objective perceptual testing - The perceptual audio quality measure (PAQM) - Cognitive effects in judging audio quality.

UNIT II TIME-FREQUENCY ANALYSIS: FILTER BANKS AND TRANSFORMS 9 Hrs

Introduction -Analysis-Synthesis Framework for M-band Filter Banks- Filter Banks for Audio Coding: Design Considerations - Quadrature Mirror and Conjugate Quadrature Filters- Tree- Structured QMF and CQF M-band Banks - Cosine Modulated "Pseudo QMF" M-band Banks - Cosine Modulated Perfect Reconstruction (PR) M-band Banks and the Modified Discrete Cosine Transform (MDCT) - Discrete Fourier and Discrete Cosine Transform - Pre-echo Distortion- Preecho Control Strategies.

UNIT III AUDIO CODING AND TRANSFORM CODERS

Lossless Audio Coding-Lossy Audio Coding- ISO-MPEG-1A,2A,2A Advanced, 4Audio Coding -Optimum Coding in theFrequency Domain - Perceptual Transform Coder -Brandenburg-Johnston Hybrid Coder - CNET Coders - Adaptive Spectral Entropy Coding -Differential Perceptual Audio Coder - DFT Noise Substitution -DCT with Vector Quantization -MDCT with Vector Quantization.

UNIT IV TIME AND FREQUENCY METHODS FOR SPEECH PROCESSING

Time domain parameters of Speech signal – Methods for extracting the parameters: Energy, Average Magnitude - Zero crossing Rate - Silence Discrimination using ZCR and energy Short Time Fourier analysis Formant Pitch Extraction using time and frequency domain extraction _ methods HOMOMORPHIC SPEECH ANALYSIS: Cepstral analysis of Speech - Formant and Pitch Estimation – HomomorphicVocoders.

UNIT V LINEAR PREDICTIVE ANALYSIS OF SPEECH

Formulation of Linear Prediction problem in Time Domain - Basic Principle - Auto correlation method -Covariance method - Solution of LPC equations - Cholesky method - Durbin's Recursive algorithm lattice formation and solutions - Comparison of different methods - Application of LPC parameters - Pitch detection using LPC parameters – Formant analysis – VELP – CELP.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

AND RESEARCH

INSTITUTE

UNIT I THE INTEL X86 FAMILY

EDUCAT

The Intel X86 Family Architecture, 32 bit Processor Evolution Systems Connections and Timing, Instruction and Data Formats, Instruction set of X86 Processors, Addressing Modes.

INTRODUCTION TO ARM PROCESSOR UNIT II

ARM Architecture –ARM programmer's model- ARM development tools-memory hierarchy-ARM assembly language programming-Simple Examples-Architectural support for operating system- ARM instruction Set-Embedded ARM Applications

UNIT III SYSTEM DEVELOPMENT

Microprocessors Based System Design, TMS 320 Series DSP Based Signal Processing, Microcontroller 8096, architecture, addressing mode and system design.

THE MOTOROLA MC 68000 FAMILY **UNIT IV**

The MC 68000 Architecture, CPU Registrars, Data Formats, Addressing Modes, Instruction Set and Assembler Directors, Memory Management Instruction and Data, Caches, Exception Processing.

UNIT V **RISC PROCESSORS**

RISC vs CISC, RISC Properties and Evaluation, Advanced RISC Microprocessors, DEC ALPHA, The Power PC family. The SUN SPARC Family, the MIPS RX 100 Family, the Intel 960 Family. The Motorola M88110 Family, HP Precision Architecture.

Practical component P : Include case studies / application scenarios Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

Clusters and Supramolecules; Wave mechanics- Schrödinger wave equation; Chemical Bonds (types and strength).

AND RESEARCH

UNIT II SYNTHESIS AND MEASUREMENT TECHNIQUES

Prerequisite: Engineering Physics, Solid State

Nanomaterial Synthesis- Sol-gel methods, Mechanical methods: ball milling, mechanical attrition, Thin films methods: chemical vapor deposition, physical vapor deposition; Characterization techniques for nanomaterials and nano structures - FTIR, XRD, AFM, SEM, TEM, Analysis by Diffraction and Fluorescence Methods-Scanning Probe Techniques

UNIT III NANO MATERIALS & ITS PROPERTIES

Classifications of nanomaterials - Zero dimensional, one-dimensional and two dimensional nanostructures; Carbon nanomaterials: nanotubes and fullerenes; Properties- Dielectrics-Ferroelectrics-Electronic Properties and Quantum Effects- Magneto transport in Layered Structures-Organic Molecules - Electronic Structures, Properties, and Reactions.

UNIT IV NANO STRUCTURE DEVICES

FDUCATIONAL

Physics

Subject Code:

EBEC22E09

Density of states of electrons in nanostructures- Electron transport in nanostructures- Electrons in quantum wells, Electrons in quantum wires, Electrons in quantum dots; Nanostructure devices - Resonant- tunneling diodes- Field-effect transistors- Single-electron-transfer devices- Potential-effect transistors- Light-emitting diodes and lasers- Nano-electromechanical system devices- Quantum-dot cellular automata

UNIT V **APPLICATIONS OF NANOELECTRONICS**

Nanosensors- Nanoelectronics in Diagnostics applications, Environmental, Agriculturaland Food, Nanoelectronics for energy systems- batteries, solar cells.

Practical component P : Include case studies / application scenarios Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT I OVERVIEW & INSTRUCTIONS

Eight ideas - Components of a computer system - Technology - Performance - Power wall -Uniprocessors to multiprocessors; Instructions - operations and operands - representing instructions -Logical operations - control operations - Addressing and addressing modes.

UNIT II **ARITHMETIC OPERATIONS**

ALU - Addition and subtraction - Multiplication - Division - Floating Point operations - Subword parallelism.

UNIT III PROCESSOR AND CONTROL UNIT

Subject Name :

Microcontroller

Basic MIPS implementation – Building datapath – Control Implementation scheme – Pipelining – Pipelined datapath and control – Handling Data hazards & Control hazards – Exceptions.

UNIT IV PARALLELISM

Instruction-level-parallelism – Parallel processing challenges – Flynn's classification – Hardware multithreading – Multicore processors

UNIT V **MEMORY AND I/O SYSTEMS**

Memory hierarchy - Memory technologies - Cache basics - Measuring and improving cache performance - Virtual memory, TLBs - Input/output system, programmed I/O, DMA and interrupts, I/O processors.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

	AND ITS APPLICATIONS	ETL/IE					
EBEC22E11	Prerequisite: Communication Networks	Ty	3	0/0	0/0	3]

UNIT I **INTRODUCTION TO INTERNET OF THINGS**

Definition and Characteristics of IoT - Things in IoT - IoT Protocols - Logical Design of IoT - IoT enabling technologies – IoT Levels.

UNIT II DOMAIN SPECIFIC IoT

Home Automation - Cities - Environment - Energy - Retail - Logistics - Agriculture - Industry - Health and Life style-SDN and NFV for IoT.

UNIT III IoT SYSTEM MANAGEMENT AND CLOUD

Need for IoT System Management - SNMP - NETOPEER - IoT design methodology - Xively - Django-Amazon Web for IoT – SkyNetIoT.

IOT PHYSICAL DEVICES UNIT IV

Raspberry Pi - Raspberry Pi Interfaces - Arduino boards - Other IoT devices - Intel Galileo Arduino board Specification.

UNIT V **IoT APPLICATIONS**

Applications based on IoT - Smart Cities -Smart Home and Buildings -Smart Energy and the Smart Grid -Smart Health- Smart Transportation and Mobility

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

DEEMED TO BE UNIVERSITY University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Perlyar E.V.R. High Road, Maduravoyal, Chennal-95. Tamilnadu, India.

Subject Code:	Subject Name : NEURAL NETWORKS AND ITS APPLICATIONS	Ty/Lb/ ETL/IE	L	T/ S.Lr	P/R	C	
EBEC22E13	Prerequisite: Digital Electronics	Ту	3	0	0	3	

AND RESEARCH

UNIT IINTRODUCTION TO ARTIFICIAL NEURAL NETWORKS

Neuro – Physiology – General Processing Element – ADALINE – LMS Learning Rule – MADALINE – Perception Networks

UNIT II BPN AND BAM

EDUCAT

Back Propagation Network – Updating of Output and Hidden Layer Weights – Application of BPN – Associative Memory – Bi-Directional Associative Memory - Hopfield Memory – Traveling Sales Man Problem

UNIT III SIMULATED ANNEALING AND CPN

Annealing, Boltzmann Machine – Learning – Application – Counter Propagation Network – Architecture – Training – Application.

UNIT IV SOM AND ART

Self-Organizing Map – Learning Algorithm – Feature Map Classifier – Applications – Architecture of Adaptive Resonance Theory – Pattern Matching in ART Network. Neocognitron: Architecture of Neocognitron – Data Processing and Performance of Architecture of Spacio – Temporal Networks for Speech Recognition

UNIT V DEEP LEARNING

Deep Feed Forward network, regularizations, training deep models, dropouts, Training Deep Neural Networks using Back Propagation-Setup and initialization issues, vanishing and exploding Gradient problems, Gradient-Descent Strategies

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

INSTITUTE

UNIT I RANGE AND TYPES OF RADAR

Range Parameters, Pulsed Radars, Signal to Noise Ratio, Integration of Pluses Beam Parameters, System Losses and Propagation Effects MTI; CW and Pulse-Doppler Radar, Delay Lines Tracking Radar, Mono pulse, Sequential, Simultaneous, Conical Scan and Monopulse Trackers, Beacons.

TRANSMITTERS, RECEIVERS AND ANTENNA UNIT II

Klystron, Magnetron, TWT Amplifiers and Oscillators, Crossed Fields Devices, Parabolic Cassegrainian, Coefficient, Squares Antennas, Radomes, Feeds, Receivers, Performance Figures, Displays Scope and PPI Duplexers.

UNIT III **DETECTION OF RADAR SIGNALS IN NOISE**

MF, Correlation Detection, Detector Characteristics, Automatic Detection, CFAR Receiver, Pulse Compression and Classification of Targets with Radar.

PROPAGATION OF RADAR WAVES AND CLUTTER UNIT IV

Plane Earth and Spherical Earth Problem, Refraction and Diffraction, GTD Analyzers, Surface and Sea Clutter, Detection of Targets, Effects of Weather on Radar.

UNIT V **RADAR TOPICS AND NAVIGATIONAL AIDS**

Synthetic Aperture, Over the Horizon Radar, ARSR, ASR, Bistatic and Monostatic Radars, LORAN, ILS, GCA, Direction Finder, VOR Concepts, Airborne Doppler Navigation.

Practical component P: Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

INSTITUTE

UNIT I SEQUENTIAL CIRCUIT DESIGN

EDUCAT

Analysis of Clocked Synchronous Sequential Networks (CSSN), Modeling of CSSN, State Stable Assignment and Reduction, Design of CSSN, Design of Iterative Circuits, ASM Chart, ASM Realization, Design of Arithmetic circuits for Fast adder- Array Multiplier.

ASYNCHRONOUS SEQUENTIAL CIRCUIT DESIGN UNIT II

Analysis of Asynchronous Sequential Circuit (ASC) - Flow Table Reduction - Races in ASC - State Assignment Problem and the Transition Table – Design of ASC – Static and Dynamic Hazards – Essential Hazards - Data Synchronizers - Designing Vending Machine Controller - Mixed Operating Mode Asynchronous Circuits.

UNIT III FAULT DIAGNOSIS AND TESTABILITY ALGORITHMS Fault Table Method - Path Sensitization Method - Boolean Difference Method - Kohavi Algorithm -

Tolerance Techniques - The Compact Algorithm - Practical PLA's - Fault in PLA - Test Generation -Masking Cycle - DFT Schemes - Built-in Self Test.

UNIT IV SYNCHRONOUS DESIGN USING PROGRAMMABLE DEVICES 9 Hrs

Programming Techniques -Re-Programmable Devices Architecture- Function blocks, I/O blocks, Interconnects, Realize combinational, Arithmetic, Sequential Circuit with Programmable Array Logic; Architecture and application of Field Programmable Logic Sequence.

UNIT V NEW GENERATION PROGRAMMABLE LOGIC DEVICES 9 Hrs

Fold back Architecture with GAL, EPLD, EPLA, PEEL, PML; PROM – Realization State Machine using PLD - FPGA - Xilinx FPGA - Xilinx 2000 - Xilinx 3000

Practical component P: Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT I INTRODUCTION TO EMBEDDED SYSTEM AND DATA REPRESENTATION& ARM PROCESSOR 9 Hrs

Embedded system-Design goals for embedded software- Real time and multi-tasking-Embedded processors and languages-Building an embedded application-Data Representation-Fixed precision binary numbers-Binary representation of Integers and real numbers-ASCII and BCD number.

ARM Architecture Versions - ARM Architecture - Instruction Set - Stacks and Subroutines - Features of the LPC 214X Family – Peripherals – The Timer Unit – Pulse Width Modulation Unit – UART – Block Diagram of ARM9 and ARM Cortex M3 MCU.

UNIT II EMBEDDED PROGRAMMING

Components for embedded programs- Models of programs- Assembly, linking and loading - compilation techniques- Program level performance analysis - Software performance optimization - Program level energy and power analysis and optimization – Analysis and optimization of program size- Program validation and testing

UNIT III INPUT OUTPUT PROGRAMMING

I/O instructions – synchronization, transfer rate and latency – polled waiting loops – interrupt driven I/Ointerrupt service routine-Buffers and queues -ISR in assembly and C - Non-maskable interrupts - Software interrupts - Exceptions - direct memory access -comparison of methods .

UNIT IV CONCURRENT SOFTWARE AND SCHEDULING

Foreground/background systems - Multi threaded programming - shared resources and critical sections thread states - pending threads - context switching - round-robin scheduling - priority-based scheduling assigning priorities – deadlock –watchdog timers.

MEMORY MANAGEMENT AND SHARED MEMORY UNIT V

Objects in C – scope – lifetime –automatic allocation – static allocation – Dynamic allocation- recognizing shared objects – reentrant functions – read only data – accessing shared memory.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT I **INTRODUCTION**

Introduction to Quantum Computing- Power of Quantum Computing- Quantum Information- Quantum Computers. The Wave and the Corpuscular Nature of Light Photon Behavior, State Description, Measurement in Multiple Bases, Superposition States – The Superposition probability Rule.

UNIT II **QUANTUM MECHANICS**

EDUCAT

Quantum Postulates – State space, Evolution, Quantum Measurement, Distinguishing Quantum states, Projective measurements, POVM measurements -Quantum Mechanics-Hilbert Space-Linear Operators Tensor and Outer Products-Ouantum Operators- Application Ouantum mechanism: Super dense Coding -Double Silt Experiments.

UNIT III QUBITS AND QUANTUM GATES

Oubits, Bloch Sphere Representation-Rotation Operation-The Measurement of a Single Oubits-A Pair of Qubits- Bell States- Qubits as Spin Half- Integer Particles- Qubits as Polarized Photon-Entanglement, Exchange of Information / Teleportation – Quantum Coping Circuit - The Non-Cloning Theorem-Quantum Gates – Universal Quantum Gate Gates – Matrix Representation – Quantum Circuits- Single and Multiple **Qubit Controlled Operations.**

UNIT IV QUANTUM ALGORITHM

Turing Machine - Quantum Parallelism-Deutsch's Problem, Deutsch – Jozsa Algorithm -QFT(Quantum Fourier Transform)-Short's Factoring Algorithm-Simon's Algorithm-Quantum Search Algorithm- Quantum key distribution - Mathematical Models of Quantum Computers - Introduction Different implementations of quantum computer.

UNIT V QUANTUM ERROR CORRECTION

Quantum error correction and simple examples – The Three Qubit flip code, Three Qubit Phase flip code, The Shor Code - Brief Introduction to Quantum Computing Software - Quantum error-correcting codes:Error models, Criteria for a good code: reversible operations.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

AND RESEARCH

INSTITUTE

UNIT I **POWER ELECTRONIC DEVICES**

FDUCATIONAL

Characteristics of Power Devices - Characteristics of SCR - Two Transistor Model of SCR, Characteristics of TRIAC, BJT, MOSFET, IGBT, GTO both Static and Switching Characteristics - Protection of Thyristors against Over Voltage - Over Current, dv/dt and di/dt.

TRIGGERING & COMMUTATION TECHNIQUES UNIT II

Turn on Circuits for SCR - Triggering with Single Pulse & Train of Pulses - Triggering with Microprocessor - Different Techniques of Commutation - Natural and Forced Commutation - Series & Parallel Operations.

PHASE CONTROLLED CONVERTERS UNIT III

Converters – Single Phase – Three Phase – Half Controlled and Fully Controlled Rectifiers with R, RL and RLE Loads - Waveforms of Load Voltage and Line Current - Harmonic Factor, Power Factor, Ripple Factor, Distortion Factor - Operation with Freewheeling Diode - Effect of Source Inductance - Dual Converter.

UNIT IV **INVERTERS & CHOPPERS**

Voltage and Current Source Inverters, Resonant, Series Inverter - Basic Series Inverter, Modified, Improved – PWM Techniques – Single Phase AC Choppers with R and RL Load – Half Wave and Full Wave - DC Choppers - Various Classes of Operation - Buck, Boost and Buck - Boost Type Choppers -Merits and Applications.

UNIT V AC VOLTAGE CONTROLLERS & INDUSTRAIL APPLICATIONS 9 Hrs Single-Phase and Three-Phase AC Voltage Controllers - Sequence Control of AC Voltage Regulators.Cycloconverters - Single-Phase and Three-Phase Cycloconverters, SMPS & UPS - Static Compensators - HVDC Transmission System.

Practical component P: Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Subject Code:	Subject Name : HIGH SPEED SWITCHING	Ty / Lb/	L	T/SLr	P/R	С	
	ARCHITECTURE	ETL/IE					
EBEC22E19	Prerequisite: Communication Networks	Ту	3	0/0	0/0	3	l

UNIT I **HIGH SPEED NETWORK**

Introduction-LAN, WAN, Network evolution through ISDN to B-isdn, Transfer mode and control of B-ISDN, SDH multiplexing structure, ATM standard, ATM Adaption layers

LAN SWITCHING TECHNOLOGY UNIT II

Switching concepts, Switch forwarding techniques, Switch path control, LAB switching, cut through forwarding, Store and forward, Virtual LANS

UNIT III **ATM SWITCHING ARCHITECTURE**

Switch models, blocking networks-Basic-and-enhanced banyan networks, sorting networks merge sorting, Re-arrange able networks-full-and-partial connection networks, Non-blocking networks-Recursive network construction, comparison of non-blocking network, Switches with deflection routing-shuffle switch, Tandem banyan

UNIT IV **QUEUES IN ATM SWITCHES**

Internal Queuing-Input, Output and shared queuing multiple queuing networks Combined input, Output and shared queuing-performance analysis of Queued Switches

UNIT V **IP SWITCHING**

Addressing model, IP Switching types-flow driven and topology driven solutions, IP over ATM address and next hop resolution, Multicasting, Ipv6 over ATM

Practical component P: Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

EBEC22E21	Prerequisite: Communication Networks	Ту	3	0/0	0/0	3

UNIT IINTRODUCTION

Optical communication - Basics of sources, transmitters, Modulators, Optical fiber, photo detectors, and receivers - Switching in networks - circuit switched - Packet switched - cell switched - Virtual circuit switched – Burst switched (fast circuit switched) – Transmission /Asynchronous – synchronous.

UNIT II SWITCHING NETWORKS

Layering in packet switched networks – motivation – commonly used abstraction: Physical layer – Data link layer - Network layer - Transport layer - Application layer - Layering in circuit switched networks -Physical layer – Multiplexing standards – Signaling – CAS, CCS, SS7 concept – Data plane – management plane – control plane – concept.

UNIT III OPTICAL TRANSMITTER AND RECEIVERS

First generation networks – SDH/SONET – Computer interconnections – ESCON – Fiber channel – HIPPI - FDDI - ATM - DQDB - Components - description - Mode locked laser (for ps pulses) - Tunable filters multiplexers – De-multiplexers – Tunable wavelength convertors – Optical amplifiers.

Fiber - EDFA - SOA - Tunable transmitters - Tunable receivers - Dispersion compensating fibers -Multiplexing techniques - SDM - TDMA - WDMA (OFDMA) - DWDM - SCM - CDMA - Protocols for single channel broadcast networks - ALOHA, CSMA/CD - Problems with CSMA/CD - Definition of high speednetwork.

UNIT IV **MULTIPLE ACCESS METHODS**

Classifications of multiple access methods - Random access - Reserved access - Scheduled access -Multichannel multiple access protocols - Desirable characteristics of protocol - Scalability - Fairness -TTTR – TTFR – FTTR – FTFR – Problem of wavelength stability – Multi hop WDM network – Shuffle net - MSN - Wavelength routed networks - Mesh - Ring - Traffic grooming problem - IP over optical framework - ASON - MpeS - Burst switched network (buffer less networks).

UNIT V **OPTICAL SWITCHES**

All -optical circuit switches - All-optical packet switches - Broadcast and select - Wavelength routed -Spaced switch based – Discussion on various switch architectures – Packet buffering techniques: Travelling type - Recirculating type: Protection and restoration - Restoration mechanism: Restoration timing issues -Path protection- Span protection – P –cycles.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

AND RESEARCH

INSTITUTE

UNIT I **INTRODUCTION**

Electromagnetic Optics: electromagnetic theory of light, electromagnetic waves in vacuum & dielectric media, absorption and dispersion, pulse propagation in dispersive media, Meta materials

Polarization Optics: polarization of light, reflection and refraction, optics of anisotropic media, Optics of liquid crystals, polarization devices.

UNIT- II **GUIDED WAVE AND FIBER OPTICS**

Guided wave Optics: electromagnetic waves in dielectric layered media, photonic crystals, waveguides, resonators, plasmonics.

Fiber Optics: electromagnetic waves in fiber, Attenuation and dispersion, photonic crystal fibers.

UNIT- III SEMICONDUCTOR OPTICS

Semiconductor Optics: quantization of electromagnetic field, quantum states of light, photon statistics, interaction of photons with charge carriers, light emitting diodes, laser diodes, microcavity lasers.

UNIT- IV DECTECTION OF LIGHT, ACOUSTO AND ELECTRO OPTICS

Detection of light: theory of photo detection, phdetectors, photodiodes, avalanche photodiodes, noise in photo detectors.

Acousto and Electro Optics: interaction of light and sound, acousto-optic devices, Principles of electro optics, electro optics of anisotropic media, electro optics of liquid crystals

UNIT- V SPECIAL FIBER OPTIC AND SENSORS

Special fibres- polarization maintaining fibres, holey fibre, PC fibres, DC Flattened and dispersion shifted fibre.

Fibre optic sensors- advantages of FOS, intensity modulated sensors, interferometric sensors, rotation sensors, bio sensors. Optical communication - advantages, modulation, time division and wave length multiplexing.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

AND RESEARCH

UNIT I **INTEGRATED PASSIVE DEVICES**

Types and Structures of Resistors and Capacitors in Monolithic Technology – Dependence of Model Parameters on Structure.

UNIT II **INTEGRATED DIODES**

Junction and Schottky Diodes in Monolithic Technologies - Static and Dynamic Behavior - Small and Large Signal Models – SPICE Models.

UNIT III **INTEGRATED BIPOLAR TRANSISTOR**

Types and Structures in Monolithic Technologies - Basic Model (Eber Moll_-Cunmel - Poon Model -Dynamic Model, Parasitic Effects - SPICE Model - Parameter Extraction.

UNIT IV INTEGRATED MOS TRANSISTOR

n-MOS and p-MOS Transistor - Threshold Voltage -Threshold Voltage Equations - MOS Device Equations – Basic DC Equations Second Order Effects – MOS Models Small Signal AC Characteristics – MOSFET SPICE Model Level 1,2,3,4

UNIT V SPICE MODELLING

Advanced Concepts of Large Signal & Low Signal Modeling Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

VLSI DESIGN FLOW UNIT I

EDUCAT

Design hierarchy concepts of regularity, modularity & locality VLSI Design styles - CMOS Fabrication Technology- Introduction, Fabrication Process flow- basic steps, CMOS n-well process, p-well process, twin tub process, layout design rules-Introduction-CMOS Layout design rules - CMOS inverter Layout design -Layout of CMOS NAND & NOR gates - Complex CMOS Logic gates

PARASITIC EXTRACTION & PERFORMANCE ESTIMATION FROM UNIT II PHYSICAL STRUCTURE

Introduction - Reality with inter connection - MOSFET capacitances-interconnect capacitance estimation interconnect resistance estimation

UNIT III **CLOCK SIGNALS & SYSTEM TIMING**

On chip clock generation & distribution using ring & pierce crystal oscillator - non - overlapping clock signals and gate level implementation - H-tree clock distribution N/W - clock skew reduction - Zero -Skew clock routing N/W- Clock distribution N/W for DEC alpha µp chips

UNIT IV **TESTABILITY OF INTEGRATED SYSTEMS-VLSI FOR FUZZY LOGIC SYSTEMS** 9 Hrs

Design constraints - Testing - The rule of ten - terminology - Failures in CMOS - Combinational Logic Testing – Practical Ad-Hoc DFT guidelines – Scan design techniques- Integrated implementations of FLC, Digital implementation of FLC's, Analog implementation of FLC's, Mixed digital / analog implementations of Fuzzy systems, CAD automation for FLC DESIGN, NN implementing fuzzy systems.

UNIT V **ARITHMETIC FOR DIGITAL SYSTEMS**

Introduction – notation systems – Principles of generation & propagation – 1 bit full adder – Enhancement Techniques for Adders - multi operand - Adders - Multiplication - Addition and Multiplication in Galois Fields GF(2n)

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

ETL/IE INSTRUMENTATION

UNIT I **BASIC PHYSIOLOGY**

Subject Code:

EBEC22E25

FDUCATIONAL

Engineering

Cells and their Structures - Transport of Ions Through Cell Membrane - Resting and Excited State - Trans membrane Potential - Action Potential - Bio-Electric Potential - Nervous System - Physiology of Muscles - Heart and Blood Circulation - Respiratory System - Urinary System.

BASIC TRANSDUCER PRINCIPLES AND ELECTRODES UNIT II

Subject Name : BIOMEDICAL

Prerequisite: Electrical and Instrumentation

The Transducer Principles – Active Transducers – Passive Transducers – Transducer for Bio-Medical Application – Electrode Theory- Bio-Potential Electrode – Bio-Chemical Transducer.

CARDIOVASCULAR SYSTEM UNIT III

The Heart and Cardiovascular System – Blood Pressure – Characteristics of Blood Flow – Heart Sounds -Electro Cardiograph – Measurements of Blood Pressure – Measurement of Blood Flow and Cardiac O/P Plethysmography – Measurements of Heart Sounds

UNIT IV X-RAY AND RADIOISOTOPE INSTRUMENTATION:

X-ray Imaging Radiography - Fluoroscopy - Image Intensifiers - Angiography - Medical use of Radioisotopes – Beta Radiations – Detectors – Radiation Therapy.

UNIT V BIO-TELEMETRY

Introduction to Bio-Telemetry – Physiological Parameters Adaptable to Bio-Telemetry – The Components of Bio-Telemetry Systems – Implantable Units – Applications of Telemetry in Patient Care – Application of Computer in Bio-Medical Instrumentation, Anatomy of Nervous System – Measurement from the Nervous System – EEG – EMG.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

TEXT BOOKS:

UNIT I INTRODUCTION

EDUCAT

Fundamental concepts of Spread spectrum systems, Pseudo noise sequences, Director Sequence Spread Spectrum (DSSS) and Frequency Hop Spread Spectrum Systems and Code Division multiple acess

UNIT II PERFORMANCE CHARACTERIZATION OF DIGITAL

Systems communications models – Performance of spread spectrum signals in jamming environments– spread spectrum systems performances with forward error correction

UNIT III SPREAD SPECTRUM SYSTEMS

Direct sequence spread spectrum methods employing BPSK, QPSK and MSK - Frequency Hop spread spectrum methods - Hybrid direct sequence/frequency hop spread spectrum. Complex envelop representation of spread spectrum signals.

UNIT IV BINARY SHIFT REGISTER SEQUENCES FOR SPREAD SPECTRUM SYSTEMS 9Hrs

Sequence generator fundamentals, Maximum length sequences. Gold and Kasami codes, Nonlinear Code generators

UNIT VSYNCHRONIZATION OF SPREAD SPECTRUM SYSTEMS:9 HrsDiversity reception in fading channels, Cellular radio concept, CDMA cellular systems, Examples of
CDMA cellular systems. Multicarrier CDMA systems.CDMA standards.9 Hrs

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT IELEMENTS OF ORBITAL MECHANICS

Equation, Orbital Elements, Orbital Perturbation, Tracking and Orbital Determination, Orbital Correction Control.

ELEMENTS OF COMMUNICATION SATELLITE DESIGN

Space Environment, Spacecraft Configuration, Spacecraft Subsystem, Payload, Reliability Consideration Spacecraft Integration and Testing.

UNIT II MULTIPLE ACCESS TECHNIQUES

FDM – FM – FDMA, TDMA, SSMA / CDMA, RANDOM MULTIPLE Access Techniques; Packet Switching and Packet Satellite Networks Satellite on Board Processing and Switching.

UNIT III SATELLITE LINK DESIGN

Types of System: BSS, Performance Requirements and Standards for Telephony, TV and DATA, Performance Impairments, Noise, Interference, Inter modulation, Design of Typical Satellite Links.

UNIT IV DOMESTIC SATELLITE SYSTEMS

The INSAT System, International System, INTELSAT, IMMARSAT, Satellite Based Personal Communication LEO, ICO, GEO Systems.

UNIT V EARTH STATION DESIGN

Earth Station Configuration, Site Selection, Antenna and Tracking Systems, Receiver and Transmitter Subsystems, Terminal Equipment: Telephone / Video Interface, Rearward Links, Miscellaneous Facilities Like Echo Suppressor, FM Digitizers, Ground Station Measurements, Elements of Frequency Coordination and Control, VSAT Networks and Terminals – Satellite Broadcasting, Satellite TV Systems. **Practical component P: Include case studies / application scenarios**

Subject Code:	Subject Name : NEXT GENERATION COMMUNICATION	Ty / Lb/ ETL/IE	L	T/SL r	P/R	С
EBEC22E29	Prerequisite: Digital Communication	Ту	3	0/0	0/0	3

UNIT I INTRODUCTION TO FUNDAMENTALS OF WIRELESS COMMUNICATION 9Hrs

Evolution of cellular systems-Requirements, goals, and vision of the next generation wireless communication systems- Fading-Digital modulations-Performance Metrics

UNIT II **KEY CONCEPTS IN 5G**

Small cells: Past, present, and future trends of cellular networks coverage and capacity of small cell networks-Interference management, D2D architecture Towards IoT Spectrum sharing.Massive MIMO: Point-to-point MIMO, Virtual MIMO (relaying), multiuser MIMO MassiveMIMO, propagation channel model, channel estimation, uplink and downlink data transmission-capacity bounds- achievable rate- energy and spectral efficiency trade-off

UNIT III mmWAVE TECHNOLOGY AND MULTIPLE ACCESS TECHNIQUES 9 Hrs

Applications-Radiowave propagation-Physical layer design and algorithms- mmWaveMIMO challengeschannel modeling- channel estimation- Beamforming.Multiple access techniques: OFDM, filter banks, GFDM, OTFS, NOMA

UNIT IV TRANSITION TO 6G

Wireless energy harvesting-Machine learning, visible light communication, Intelligent reflecting surface (IRS)- Extremely Large Aperture Massive MIMO- Energy-rate trade-off- Simultaneous wireless information and power transfer (SWIPT)- time-switching- power splitting- Wireless powered communication networks -Outage probability and throughput.

UNIT V APPLICATIONS OF MACHINE LEARNING

Channel modeling and estimation Spectrum sensing and sharing Resource allocation (NOMA, mmWave massive MIMO).

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

AND RESEARCH

TO BE UNIVER

UNIT I INTRODUCTION TO **SDR**

Definitions and potential benefits, software radio architecture evolution - foundations, technology tradeoffs and architecture implications, Antenna for Cognitive Radio.

UNIT II SDR ARCHITECTURE

Essential functions of the software radio, architecture goals, quantifying degrees of Programmability, top level component topology, Computational properties of functional components, interface topologies among plug and play modules, architecture partitions.

UNIT IIIINTRODUCTION TO COGNITIVE RADIOS

Making radio self-aware, the cognition cycle, organization of cognition tasks, structuring knowledge for cognition tasks, Enabling location and environment awareness in cognitive radios – concepts, architecture, design considerations.

UNIT IV COGNITIVE RADIO ARCHITECTURE

Primary Cognitive Radio functions, Behaviors, Components, A-Priori Knowledge taxonomy, observe phase data structures, Radio procedure knowledge encapsulation, components of orient, plan, decide, act phases; knowledge representation, design rules.

UNIT V NEXT GENERATION WIRELESS NETWORKS

The XG Network architecture, spectrum sensing, spectrum management, spectrum mobility, spectrum sharing, upper layer issues, cross – layer design.

Practical component P : Include case studies / application scenarios Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT I **INTRODUCTION TO MEMS**

Engineering

MEMS and Microsystems, Miniaturization, Typical products, Micro sensors, Micro actuation, MEMS with micro actuators, Micro accelerometers and Micro fluidics, MEMS materials, Micro fabrication

AND RESEARC

DEEMED TO BE UNIVERSITY University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Perlyar E.V.R. High Road, Maduravoyal, Chennal-95. Tamilnadu, India.

Subject Name : INTRODUCTION TO

Prerequisite: Electrical and Instrumentation

MEMS SYSTEM DESIGN

UNIT II **MECHANICS FOR MEMS DESIGN**

Elasticity, Stress, strain and material properties, Bending of thin plates, Spring configurations, torsional deflection, Mechanical vibration, Resonance, Thermo mechanics - actuators, force and response time, Fracture and thin film mechanics.

UNIT III ELECTRO STATIC DESIGN

Electrostatics: basic theory, electro static instability. Surface tension, gap and finger pull up, Electro static actuators, Comb generators, gap closers, rotary motors, inch worms, Electromagnetic actuators. Bi stable actuators.

UNIT IV CIRCUIT AND SYSTEM ISSUES

Electronic Interfaces, Feedback systems, Noise, Circuit and system issues, Case studies - Capacitive accelerometer, Peizo electric pressure sensor, Modeling of MEMS systems, CAD for MEMS.

UNIT V INTRODUCTION TO OPTICAL AND RF MEMS

Optical MEMS, - System design basics - Gaussian optics, matrix operations, resolution. Case studies, MEMS scanners and retinal scanning display, Digital Micro mirror devices. RF Memes - design basics, case study - Capacitive RF MEMS switch, performance issues.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

CATIONAL AND RESEARCH INSTITU DEEMED TO BE UNIVERSITY University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) eriyar E.V.R. High Road, Naduravoyal, Chennai-95, Tamiinadu, India.

Subject Code:	Subject Name : ANALYSIS AND DESIGN OF ANALOG IC's	Ty /Lb/ ETL/IE	L	T/S Lr	P/R	С
EBEC22E32	Prerequisite: : Analysis of Solid State Devices, Linear Integrated circuits	Ту	3	0/0	0/0	3

UNIT I INTRODUCTION TO ANALOG IC DESIGN AND CURRENT MIRRORS 9 Hrs

Concepts of Analog Design - General consideration of MOS devices – MOS I/V Characteristics – Second order effects – MOS device models. Basic current mirrors- Cascade current mirrors- Active current mirrors- Large and Small signal analysis- Common mode properties.

UNIT II OPERATIONAL AMPLIFIERS AND NOISE

General considerations- Miller Effect and Association of Poles with Nodes, Common source stage- Source followers- Common gate stage- Cascade stage- Differential pair. Noise- Statistical characteristics of noise-Types of noise- Representation of noise in circuits- Noise in single stage amplifiers- Noise in differential pairs- Noise Bandwidth

UNIT III ANALOG MULTIPLIER AND PLL

Analysis of four Quadrant and Variable Trans-conductance Multiplier, Phase Locked Loops-Simple PLL-Charge pump PLLs - Non ideal Effects in PLLs- Delay locked loops- its Applications.

UNIT IV MOS ANALOG ICS

EDUCAT

Design of MOS Operational Amplifier, MOS Power Amplifier. CMOS Operational Amplifier: Introduction and analysis of Cascade Amplifier and Telescopic Cascade Amplifier. Design of CMOS op-amps, Compensation of op-amps, Design of Two stage op-amps, Cascade op-amps.

UNIT V SWITCHED CAPACITOR CIRCUITS

General Considerations- Sampling switches- Switched Capacitor Amplifiers- Switched Capacitor Integrator- Switched Capacitor Common mode feedback.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

AND RESEARCH

UNIT I **INTRODUCTION TO CPS**

Basic Principles of Design and validation – Industry 4.0 – IoT Implications – Processors, Sensors and Actuators - Wireless HART, CAN , Automotive Ethernet-RTOS

UNIT II AUTOMATED CONTROL DESIGN

Dynamic System and Stability – Controller Design Techniques – CLFs, MLFs under slow switching -Performance under Packet drop and noise

UNIT III **CPS IMPLEMENTATION**

Mapping of features to software to ECUs –Effect of scheduling – Bus Latency – sense and actuation faults on control performance-network congestion-Control, Bus and Network Scheduling

UNIT IV FORMAL METHODS FOR SAFETY

Advanced Automata based Modeling and Analysis - Introduction, Timed and Hybrid Automata, Trajectories and zenoness, and formal analysis, CPS software-weakest Pre-conditions and bounded model checking

UNIT V SECURE DEPLOYMENT

Secure Task Mapping and Partitioning – State Estimation for attack detection – Case Study – Automated Lighting and AC control in green buildings

UNIT I **INTRODUCTION**

Introduction to digital control - Sampling Process - Sample and Hold Circuit - Zero and First Order hold -Z-Transform – Inverse Z- Transform – Region of convergence – Initial and Final Value Theorem

UNIT II PULSE TRANSFER FUNCTION AND TIME RESPONSE

Block diagram reduction methods - Reduction Rules- Multi-loop - MIMO Systems - Signal Flow Graphsteady state error - error transfer functions- Error Constants-Time-Domain Analysis of Second Order Systems-Time Response

UNIT III **STABILITY**

Introduction-Jury Stability Test- Schur-Cohn stability Test- Bilinear transformation- Stability by Pole Location - Root locus method- Bode Plot- Nyquist Plot.

UNIT IV DIGITAL PID CONTROLLER

Cascade Compensation- Digital Lag Lead Compensator by Bode method- Design of P,PI and PID Controller- Ziegler's- Nichols Method, Cohen-Coon Method

UNIT V STATE SPACE ANALYSIS

Realization of Pulse Transfer Function- Diagonalisation- discretization of Continuous time systemsState Transition Matrix- Solution of Discrete-time state equations- Controllability and Observability

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

UNIT I **EMI ENVIRONMENT**

Sources of EMI, Conducted and Radiated EMI, Transient EMI, EMI-EMC Definitions and Units of Parameters. Units of Specification, Civilian Standards Military Standards.

UNIT II EMI COUPLING PRINCIPLES

Conducted, Radiated and Transient Coupling, Common Impedance Ground Coupling, Radiated Common Mode and Ground Loop Coupling, and Radiated Differential Mode Coupling, Near Field Cable to Cable Coupling, Power Mains and Power Supply Coupling.

EMI MEASUREMENTS UNIT III

EMI Test Instruments Systems. EMI Test, EMI Shielded Chamber, Open Area Test Site, TEM Cell Antennas, Conductors Sensors / Injectors / Couplers. Military Test Method and Procedures, Calibration Procedures.

UNIT IV **EMICONTROL TECHINOUES**

Shielding, Filtering, Grounding, Bonding, Isolation Transformer, Transient Suppressors, Cable Routing, Signal Control, Component Selection and Mounting.

UNIT V **EMI DESIGN OF PCBs**

PCB Traces Cross Talk, Impedance Control, Power Distribution Decoupling, Zoning Motherboard Design and Propagation Delay Performance Models.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT I DISCRETE RANDOM SIGNAL PROCESSING

SIGNAL PROCESSING

Subject Name : ADVANCED CONCEPTS IN

Prerequisite: Digital Signal Processing

9 Hrs Discrete Random Process, Expectation, Variance, Co-Variance, Scalar Product, Energy of Discrete SignalParseval's Theorem, Wiener Khintchine Relation-Power Spectral Density –Periodogram – Sample AutocorrelationSum Decomposition Theorem, Spectral Factorization Theorem – Discrete Random Signal Processing by Linear Systems-Simulation of White Noise – Low Pass Filtering of White Noise.

SPECTRUM ESTIMATION UNIT II

FDUCATIONAL

Subject Code:

EBEC22E36

Non-Parametric Methods-Correlation Method - Co-Variance Estimator - Performance Analysis of Estimators - Unbiased, Consistent Estimators - Periodogram Estimator - Barlett Spectrum Estimation -Welch Estimation – Model based Approach – AR, MA, ARMA Signal Modeling – Parameter Estimation using Yule-Walker Method.

UNIT III LINEAR ESTIMATION AND PREDICTION

9 Hrs Maximum likelihood criterion-efficiency of estimator – Least mean squared error criterion – Wiener filter – Discrete Wiener Hoff equations – Recursive estimators-Kalman filter – Linear prediction, prediction errorwhitening filter, inverse filter – Levinson recursion, Lattice realization, and Levinson recursion algorithm for solving Teoplitz system of equations.

UNIT IV **ADAPTIVE FILTERS**

FIR adaptive filters – Newton's steepest descent method-adaptive filter based on steepest descent method – Widrow Hoff LMS adaptive algorithm - Adaptive channel equalizations - Adaptive echo chancellor -Adaptive noise cancellation – RLS adaptive filters –Exponentially weighted RLS – sliding window RLS – Simplified IIR LMS adaptive filter

MULTIRATE DIGITAL SIGNAL PROCESSING UNIT V

Mathematical description of change of sampling rate - Interpolation and Decimation -continuous time model – Direct digital domain approach -Decimation by an integer factor – Interpolation by an integer factor - single and multistage realization - Poly phase realization - Application to sub band coding -Wavelet transform and filter bank implementation of wavelet expansion of signals.

Practical component P: Include case studies / application scenarios

Research component R: Future trends / research areas / Comparative Analysis **Total Number of Hours: 45**

EBEC22E37	Prerequisite: Digital Communication	Ту	3	0/0	0/0	3	

UNIT IINTRODUCTION TO UWB SYSTEMS

Overview of UWB - UWB Concept - UWB Signals: Impulse (I) and Multi-Carrier (MC) Signals, Uniqueness of UWB Systems; I-UWB System Model; MC-UWB System Model. Advantages of UWB Systems - Challenges in UWB Systems - Single Band Vs. Multi Band - Applications of UWB Systems -Regulatory, Legal & Other Controversial Issues.

UNIT II **INTERFERENCE, COEXISTENCE & UWB ANTENNAS**

Interference of UWB on NB: UWB Pulse Model - Effect of NB Receive Filter - BER Analysis - Time-Hopped Case - Aggregate of UWB Interference Modeling: Received Power - Asymptotic PDF of Aggregate Noise - Amplitudes: Aggregated PDF - Bernoulli and Poisson Models - Interference Analysis: NB on UWB, UWB on UWB - Basic Properties of UWB Antennas.

UWB TRANSMITTER DESIGN UNIT III

IUWB Signal Generators: Avalanche Pulse Generators - Step Recovery Diode Pulse Generators- Tunnel Diode Pulsars - Pulse Circuits Suitable for Integrated Circuits - Modulators- I-UWB Transmitters: TH-PPM and TH(A-PAM) UWB Signals - OOC-PPM UWB Signals - DSUWB Signals - TR UWB System-MC-UWB Transmitters: CI-UWB Signals - FH-UWB Systems - OFDM-UWB Systems - Spectral Encoded UWB Communication System.

UNIT IV **IUWB RECEIVER DESIGN**

System Model- Threshold/Leading Edge Detection - Correlation Detection (CD) Receivers - RAKE Receivers - Multi-User Detection (MUD) UWB Receivers- Hybrid RAKE IMUD Receivers - Auto Correlation TR UWB Receivers- Synchronization and Timing Issues - Digital I-UWB Implementation.

UNIT V **UWB COMMUNICATION STANDARDS AND ADVANCED TOPICS** 9 Hrs

standardization in wireless personal area networks - DS-UWB proposal - MB-OFDM UWB proposal -IEEE proposals for UWB channel models - UWB ad-hoc and sensor networks - MIMO and Space-time coding for UWB systems - Self interference in high data-rate UWB communications - Coexistence of DS-UWB with WIMAX.

Practical component P: Include case studies / application scenarios Research component R: Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

EBEC22E38	Prerequisite: Digital Signal Processing	Ту	3	0/0	0/0	3

ND RESEARCH

NSTITUTE

UNIT I FUNDAMENTALS OF UNDERWATER ACOUSTICS

The Ocean acoustic environment, measuring sound level, Sources and receivers, relevant units, sound velocity in sea water, typical vertical profiles of sound velocity, Sound propagation in the Oceancharacteristic sound propagation paths-deep water and shallow water, Range dependent environment. Sound attenuation in sea water, Bottom Loss, Surface bottom and volume scattering, Snell's law for range dependent ocean.

UNIT II AMBIENT NOISE IN THE SEA

Sources of ambient noise-introduction, different frequency bands of ambient noise, process of surface noise generation, shallow water, variability of ambient noise, spatial coherence of ambient noise, directional characteristics of ambient noise, intermittent sources of noise- biological & non biological (rain, earthquakes, explosions and volcanoes).

SIGNALS, FILTERS AND RANDOM FUNCTIONS **UNIT III** 9 Hrs

Fourier representations, filters and noise, digital filter design techniques, temporal resolution and bandwidth of signals, signal to noise power ratio, Estimates of auto-covariance, power spectrum, cross covariance and cross spectrum.

UNIT IV CHARACTERISTICS OF SONAR SYSTEMS 9 Hrs

Sonar systems, active and passive sonar equations, transducers and their directivities, Sensor array characteristics-array gain, receiving directivity index, beam patterns, shading and super directivity, adaptive beam forming.

UNIT V DSP PROCESSORS

Architecture of ADSP 218x, Architecture of TMS 320C541X. CASE STUDY:

1. Signal processing of ocean ambient noise data.

2. Beam forming of vertical linear array data.

Practical component P: Include case studies / application scenarios Research component R: Future trends / research areas / Comparative Analysis

UNIT I INTRODUCTION ON SECURITY

EDUCATIONAL

Security Goals, Types of Attacks: Passive attack, active attack, attacks on confidentiality, attacks on Integrity and availability. Security services and mechanisms, Techniques: Cryptography, Steganography, Revision on Mathematics for Cryptography.

UNIT II SYMMETRIC & ASYMMETRIC KEY ALGORITHMS

Substitution Ciphers, Transposition Ciphers, Stream and Block Ciphers, Data Encryption Standards (DES), Advanced Encryption Standard (AES), RC4, Principle of asymmetric key algorithms, RSA Key distribution.

UNIT III INTEGRITY, AUTHENTICATION AND KEY MANAGEMENT

Message Integrity, Hash functions: SHA, Digital signatures: Digital signature standards. Authentication Entity Authentication: Biometrics, Key management Techniques, Introduction to Quantum Cryptography.

UNIT IV NETWORK SECURITY, FIREWALLS AND WEB SECURITY

Introduction on Firewalls, Types of Firewalls, Firewall Configuration and Limitation of Firewall. IP Security Overview, IP security Architecture, authentication Header, Security payload, security associations, Key Management. Web security requirement, secure sockets layer, transport layer security, secure electronic transaction, dual signature

UNIT V WIRELESS NETWORK SECURITY

Security Attack issues specific to Wireless systems: Worm hole, Tunneling, DoS WEP for Wi-Fi network, Security for 4G networks: Secure Ad hoc Network, Secure Sensor Network Practical component P: Include case studies / application scenarios

INTRODUCTION TO AI UNIT I

Overview of AI application areas: game playing, automated reasoning and theorem proving, expert systems, natural language understanding, planning and robotics, machine learning and Alan Turing Test.

UNIT II LOGIC

Symbol and sentences, the semantics of the Propositional Calculus & Predicate Calculus.Inference Rules and Theorem Proving. Axioms, Literals, Horn clause & Clausal forms

UNIT III REASONING

Inductive, Deductive, Abductive and Default reasoning. More examples on Resolution proof.

UNIT IV **PROBLEM SOLVING**

Structures and strategies for state space search. Algorithms for Heuristic search, Heuristic evaluation functions

KNOWLEDGE REPRESENTATION UNIT V

Knowledge representation Techniques; conceptual graphs; structured representations; frames, scripts; issues in knowledge representation: hierarchies, inheritance, exceptions.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

UNIT I: INTRODUCTION

Introduction to Machine Learning- Supervised Learning, Unsupervised Learning and Reinforcement Learning.

UNIT II PROBABILITY BASICS

Linear Algebra - Statistical Decision Theory – Regression & Classification - Bias – Variance - Linear Regression - Multivariate Regression

UNIT III DIMENSIONALITY REDUCTION

Dimensionality Reduction Subset Selection - Shrinkage Methods - Principal Components Regression - Linear Classification - Logistic Regression - Linear Discriminant Analysis Optimization - Classification - Separating Hyperplanes Classification

UNIT IV DECISION MAKING

Artificial Neural Networks (Early Models, Back Propagation, Initialisation, Training and Validation) -Parameter Estimation (Maximum Likelihood Estimation, Bayesian Parameter Estimation) - Decision Trees -Evaluation Measures - Hypothesis Testing - Ensemble Methods - Graphical Methods

UNIT V CLUSTERING METHODS

Clustering - Gaussian Mixture Models - Spectral Clustering - Learning Theory - Reinforcement Learning.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

Subject Code:	Subject Name : WIRELESS SENSOR NETWORKS	Ty/Lb/ ETL/IE	L	T/ S.Lr	P/R	C
EBEC22E44	Prerequisite: Communication Networks	Ту	3	0/0	0/0	3

UNIT I: INTRODUCTION AND OVERVIEW OF WIRELESS SENSOR NETWORKS

Introduction, Brief Historical Survey of Sensor Networks, and Background of Sensor Network Technology, Ah-Hoc Networks, Applications of Wireless Sensor Networks: Sensor and Robots, Reconfigurable Sensor Networks, Highway Monitoring, Military Applications, Civil and Environmental Engineering Applications, Wildfire Instrumentation, Habitat Monitoring, Another Taxonomy of WSN Technology, Basic Sensor Network Architectural Elements, Home Control, Medical Applications.

ROUTING PROTOCOLS FOR AD HOC WIRELESS NETWORKS UNIT II

Designing issues, classification of routing protocols, table driven routing protocols, on demand routing protocol, Hybrid routing protocol, Hierarchical routing protocols. Multicast routing in Ad Hoc wireless networks: Operations and classification of multicast routing protocols, Tree based multicast routing protocol, Mesh based multicast routing protocol.

UNIT III SYSTEM ARCHITECTURE AND DESIGN ISSUES

EDUCAT

Design Constraints for Routing in Wireless Sensor Networks, Classification of Routing Protocols in Wireless Sensor Networks-Hierarchy Role of Nodes in the Network, Data Delivery Model, Optimization Techniques for Routing in Wireless Sensor Networks, Application of the Optimization Techniques: Routing Protocols

UNIT IV **ROUTING PROTOCOLS FOR WIRELESS SENSOR NETWORKS** 9 Hrs

Introduction, Data Dissemination and Gathering, Routing Challenges and Design Issues in Wireless Sensor Networks Network Scale and Time-Varying Characteristics, Resource Constraints, Sensor Applications Data Models, Routing Strategies in Wireless Sensor Networks: WSN Routing Techniques, Flooding and Its Variants, Sensor Protocols for Information via Negotiation, Low-Energy Adaptive Clustering Hierarchy, Power-Efficient Gathering in Sensor Information Systems, Directed Diffusion, Geographical Routing.

UNIT V TRANSPORT LAYER SECURITY PROTOCOLS FOR AD HOC WIRELESS **NETWORKS** 9 Hrs

Designing issues, classification of transport layer solutions, feedback-based TCP, TCP bus, Ad Hoc TCP, Security in Ad hoc wireless networks, Issues and challenges in security provisioning, Key management, Secure routing in Ad hoc wireless networks. Quality of Service: Issues and challenges in providing QoS in Ad Hoc wireless networks, classification of QoS solutions.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

ND RESEARCH

INSTITUTE

UNIT I AUTOMATA FUNDAMENTALS

Introduction to formal proof — Additional forms of Proof — Inductive Proofs -Finite Automata — Deterministic Finite Automata - Non-deterministic Finite Automata - Finite Automata with Epsilon Transitions

UNIT II **REGULAR EXPRESSIONS AND LANGUAGES**

Regular Expressions — FA and Regular Expressions — Proving Languages not to be regular — Closure Properties of Regular Languages — Equivalence and Minimization of Automata

UNIT IIICONTEXT FREE GRAMMAR AND LANGUAGES

CFG — Parse Trees — Ambiguity in Grammars and Languages — Definition of the Pushdown Automata — Languages of a Pushdown Automata — Equivalence of Pushdown Automata and CFG, Deterministic Pushdown Automata..

UNIT IV PROPERTIES OF CONTEXT FREE LANGUAGES

Normal Forms for CFG — Pumping Lemma for CFL — Closure Properties of CFL — Turing Machines — Programming Techniques for TM.

UNIT V UNDECIDABILITY

Non Recursive Enumerable (RE) Language — Undecidable Problem with RE — Undecidable Problems about TM — Post?s Correspondence Problem, The Class P and NP.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

ND RESEARCH

INSTITUTE

UNIT I INTRODUCTION TO MOBILE COMMUNICATION

History and Evolution of mobile radio system – Types of mobile wireless system/services – Paging, cellular, WLL, FTTH, Wi-Fi, and Future trends in Personal wireless system.

UNIT II PSTN TECHNOLOGY

EDUCAT

Difference between simplex, half-duplex and duplex transmissions – basic understanding of telephone set – history and evolution of Central Exchange Switching - Operator Switch Boards (PBX) - intraoffice and interoffice calls – Extended Area Service (EAS) – circuit switching, packet switching & TDM switching – DTMF signaling – dial register – in band & out-of-band signaling.

CELLULAR CONCEPT UNIT III

Structure of a cell – Basic cellular terminologies – Principle of Frequency Reuse – Principle of Channel assignment and its types – Types of channel interference – Different types of handoff strategies

UNIT IV 9 Hrs INTERFERENCE AND MOBILE RADIO COMMUNICATION

Interferences in Cellular Systems – Methods to improve cell coverage - Free space propagation model, reflection, diffraction, scattering, link budget design, Outdoor Propagation models and Indoor propagation models

UNIT V WIRELESS SYSTEMS AND STANDARDS

GSM, IS-95, DECT, AMPS, GPRS, UMTS, WLAN, WPAN, WMAN, Ultra Wideband communications, 4G/LTE and beyond 4G.Telecom standards and wireless standards.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

SubjectCode:	Subject Name : SATELLITE TECHNOLOGY AND REMOTE SENSING SYSTEMS	Ty / Lb/E TL/I E	L	T/S L r	P/ R	С
EBEC22OE3	Prerequisite: None	Ту	2	0/0	1/1	3

ELEMENTS OF ORBITAL MECHANICS AND FUNDAMENTALS OF UNIT I REMOTE SENSING 9 Hrs

Kepler's laws of planetary motion - Newton's laws of gravitation- Orbital Elements-Orbital Perturbation; Tracking and Orbital Determination-Orbital Correction/Control - Components of remote sensing -, Energy sources and radiation principles, electromagnetic radiation, (EMR) -EMR spectrum, active and passive remote sensing - platforms - black body radiation - Planck's law - Stefan-Boltzmann law.

UNIT II TYPES OF SATELLITES AND ELEMENTS OF SATELLITE SYSTEM 9 Hrs

Satellites - classification - based on orbits - sun synchronous and geo synchronous - based on purpose earth resource satellites, communication satellites, weather satellites, spy satellites Space Environment-Spacecraft Configuration- Spacecraft Subsystem- Payload- Reliability Consideration -Spacecraft Integration and Testing.

DOMESTIC SATELLITE UNIT III SYSTEMS AND LAUNCH VEHICLES AND FUNDAMENTALS OF MICROWAVE SENSING 9 Hrs

The INSAT System- International System: INTELSAT-IMMARSAT- Satellite Based Personal Communication-LEO-MEO-GEO Systems-PSLV and GSLV, - radar - speckle - back scattering - side looking airborne, radar – synthetic aperture radar – radiometer – geometrical characteristics

UNIT IV EARTH STATION DESIGN

Earth Station Configuration- Receiver and Transmitter Subsystems- Terminal Equipment: Telephone/ Video Interface-Echo Suppressor-FM Digitizers-Elements of Frequency Co-ordination and Control.

APPLICATIONS OF SATELLITES UNIT V

Satellite Broadcasting- Satellite TV Systems. Remote sensing satellites - satellite remote sensing in variousimportant areas- such as environmental issues- agriculture- forestry- urban issues and water management –usage of satellite data models in remote sensing- analysis of data from various climate zones and applications in research and society.

Practical component : Include case studies/application scenarios

Research component: Future trends/research areas/Comparative Analysis

UNIT I SENSOR FUNDAMENTALS

Basic Sensor Technology - Classification of sensors, Physical properties sensed by the sensors-heat, pressure, flow, current & voltage, presence, distance, position and speed.

UNIT II SENSOR CHARACTERISTICS

Transfer Function - Span (Full-Scale Input) - Full-Scale Output - Accuracy- Calibration --Calibration Error -Hysteresis - Nonlinearity - Saturation

UNIT III DIFFERENT TYPES OF SENSORS

Proximity Sensor, Pressure Sensor, Temperature Sensor, Humidity sensor, Tilt Sensor, Smoke and Gas sensor, Touch sensor, Infrared sensor, ultrasonic sensor & Light sensor

UNIT IV OTHER SENSING TECHNOLOGIES

Accelerometer and Gyroscope sensor, Hall effect Sensors, Positional Detectors, Potentiometer sensors, Vision and Imaging Sensors/ Detectors, LIDAR sensor, PIR Sensor and Color Sensor

UNIT V APPLICATION

Automotive, Manufacturing, Aviation, Medical and Health care, Marine, Robotics, Hazard Detection and AI-enabled internet of things.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

B.Tech ECE 2022 Regulation

UNIT I INTRODUCTION TO INDUSTRY 4.0

The various Industrial Revolutions - Digitalization and the Networked Economy - Drivers, Enablers, Compelling Forces and Challenges for Industry 4.0 – The Journey so far: Developments in USA, Europe, China and other countries - Comparison of Industry 4.0 Factory and Today's Factory - Trends of Industrial Big Data and Predictive Analytics for Smart Business Transformation.

UNIT II ROAD TO INDUSTRY 4.0

EDUCAT

Internet of Things (IoT) & Industrial Internet of Things (IIoT) & Internet of Services - Smart Manufacturing - Smart Devices and Products - Smart Logistics - Smart Cities - Predictive Analytics

TECHNOLOGIES FOR ENABLING INDUSTRY 4.0 UNIT III 9 Hrs

Cyber physical systems - Robotic Automation and Collaborative Robots - Support System for Industry 4.0 – Mobile Computing – Related Disciplines – Cyber Security.

UNIT IV RESOURCES

Resource- based view of a firm - Data as a new resource for organizations - Harnessing and sharing knowledge in organizations – Cloud Computing Basics – Cloud Computing and Industry 4.0 – Smart Factories

UNIT V **IIOT TECHNOLOGIES**

Industry 4.0 laboratories -IIoT Reference Architecture - Designing Industrial Internet Systems -Examining the Middleware Transport Protocols - IIoT WAN Technologies and Protocols -Securing the Industrial Internet.

Practical component P : Include case studies / application scenarios

Research component R : Future trends / research areas / Comparative Analysis

Total Number of Hours: 45

TEXT BOOKS:

- 1. Alp Ustundag and Emre Cevikcan, "Industry 4.0: Managing the Digital Transformation", Springer Series in Advanced Manufactruing.
- 2. Alasdair Gilchrist, "Industry 4.0: The Industrial Internet of Things", Apress Publications.

REFERENCE:

1. Rajesh Agnihotri and Samuel New, "Industry 4.0 Data Analytics", CreatespaceIndependent Pub (US)

INSTITUTE

DEEMED TO BE UNIVERSITY University with Graded Autonomy Status (An ISO 21001 : 2018 Certified Institution) Periyar E.V.R. High Road, Maduravoyal, Chennai-95, Tamilnadu, India.

LIST OF EXPERIMENTS

- 1. To Familiarize With Intel Galileo Gen2 Board and Understand the Procedure of Creation and Compilation of C Source Code. (Pre-Loaded Examples)
- 2. Write a Code to Control the Brightness of Led Usingintel Galileo Gen 2 Board.
- 3. To Write C Source Code to Interface temperature Sensor With Intel Galileo Gen 2 and Display the temperature on Serial Monitor.
- 4. To Write C Source Code to Interface Humidity Sensor With Intel Galileo Gen 2 and Display the temperature on Serial Monitor.
- 5. Interface Motion Sensor, With Intel Galileo Gen 2 To Give alert When Motion Is Detected.
- 6. To Write C Source Code to Interface Sound Detector With Intel Galileo Gen.
- 7. To Write C Source Code to Interface Accelerometer With Intel Galileo Gen 2 and display the Values In Serial Monitor.
- 8. To Write C Source Code to Perform Gas Sensor Interfacing With Intel Galileo Gen2 Board.
- 9. To Interface a Flame and Smoke Sensor With Intel Galileo Gen 2 in Cloud Service.
- 10. Design a Smart Lighting System Using Light Sensor, Motion Sensor and Indicate the Status Of The Light in Cloud Service.

Total Number of Hours: 45

LIST OF EXPERIMENTS

- 1. Robot circuit
- 2. Build a light-tracking robot
- 3. Simple insect robot
- 4. Line follower robot
- 5. Two-legged walking robot
- 6. Robot control using 555 timer
- 7. Study of AVR studio and code debugging
- 8. Interfacing switch to turn on bar graph leds. (implementing a "push to On" indicator)
- 9. LCD interfacing to display alphanumeric characters.
- 10. LCD interfacing to displaying integer values on the lcd.
- 11. Generation of delay using timer and turning 'on' the buzzer
- 12. Indication of the value of counter on lcd
- 13. DC motor interfacing
- 14. PWM control of the DC motor

LIST OF EXPERIMENTS

- 1. Introduction to SDK of MATLAB
- 2. Basic syntax and scalar arithmetic operations and calculations
- 3. Working with formulas
- 4. Arithmetic operations in matrix data
- 5. Matrix operations (inverse, transpose)
- 6. Reading an image file
- 7. Reading from and writing to a text file
- 8. Introduction to toolboxes
- 9. Data visualization and plotting
- 10. Relational operators in data
- 11. Logical operation in data
- 12. Loops in MATLAB
- 13. Computing Eigen value for a matrix
- 14. Random number generation Monte carlo methods
