FACULTY OF ENGINEERING AND TECHNOLOGY

DEPARTMENT
OF
ELECTRICAL AND ELECTRONICS ENGINEERING

OUTCOME BASED EDUCATION

Curriculum and Syllabus

M.Tech(Full Time)-Power System

2022 REGULATION

VISION STATEMENT

We envision a department that renders services continuously to meet the requirements of changing world in Electrical Engineering Industry by educating the students for a global competition in line with Institution's Mission.

MISSION STATEMENT

M1	**Enhance the quality of education by continuously updating curriculum and syllabi in correlation with the current trends**
M2	**Impart the students with latest technical and industry oriented software skills required for problem solving, design, testing and implementation of solutions in modern electrical power and energy related industries**
M3	**Enrich entrepreneurial skills that contributes to social-economic growth by utilizing the advanced technologies in electrical engineering**
M4	**Kindle their creative skills and encourage them to be innovators and provide a path for research and higher education**
M5	**Enlighten their communication skills and team spirit such that they reach out efficiently to the public on energy conservation and management, deal various situations practicing ethics.**

PROGRAMME EDUCATIONAL OBJECTIVES

PEO1	**Proficient in engineering fundamentals such as mathematical, core science and engineering basics, hence capable of being competent and successful electrical engineers in various fields like industry/higher education/ research/entrepreneurship therefore building an energy efficient society.**
PEO2	**Inherit the characteristics of a renowned Electrical Engineer in the field of design, testing and manufacturing of electrical and electronic equipments, novel and creative design engineers for developing cost effective technology.**
PEO3	**Exploit real time problem solving skills, applying sustainable and renewable energy technology in developing smart grids to solve the energy crisis in the society.**
PEO4	**Communicate and compile engineering data and documents professionally to the benefit an entity or society, work in team building and exhibit leadership skills and entrepreneurial qualities.**
PEO5	**Exhibit lifelong learning through innovative research activities ensuring safety and ethics.**

PROGRAMME OUTCOMES

PO1	**Ability to apply the enhanced knowledge in advanced technologies for modelling, analyzing and solving contemporary issues in power sector with a global perspective.**
PO2	**Ability to critically analyze and carry out detailed investigation on multifaceted complex Problems in area of Power Systems and envisage advanced research in thrust areas.**
PO3	**Ability to identify, analyze and solve real-life engineering problems in the area of Power Systems and provide strategic solutions satisfying the safety, cultural, societal and environmental aspects/ needs.**

PO4	**Ability for continued pursuance of research and to design, develop and propose theoretical and practical methodologies towards research and development support for the Power System infrastructure.**
PO5	**Ability to develop and utilize modern tools for modeling, analyzing and solving various Engineering problems related to Power Systems.**
PO6	**Willingness and ability to work in a team of engineers/ researchers with mutual understandings to take unsophisticated challenges, in the field of Power Systems, lead and motivate the group to inculcate multidisciplinary and collaborative approach.**
PO7	**Willingness and ability to take up administrative challenges including the management of various projects of interdisciplinary nature and carry out the same in an efficient manner giving due consideration to societal, environmental, economical and financial factors.**
PO8	**Ability to express ideas clearly and communicate orally as well as in writing with others in an effective manner, adhering to various national and international standards and practices for the documentation and presentation of the contents.**

PROGRAMME SPECIFIC OBJECTIVES

PSO1	**Graduates acquire a rigid foundation in mathematical, core science and engineering fundamentals to pursue their higher education in various globally reputed institutions and are well versed in latest software to match the industrial needs.**
PSO2	**Graduates excel in designing, analyzing, testing and evaluating of various electrical systems such as Electrical Machines and Drives, Sub-station, Smart Grid, Micro Grid, Automation and Power systems in a cost effective manner to meet the energy crisis in the society.**
PSO3	**Graduates gain skills, confidence and expertise themselves in innovative technologies associated with current technology, capable of providing efficient energy management solutions and also compete vibrantly through the professional society platform and therefore crafted to be competent Entrepreneurs and industry ready electrical engineers.**

M.Tech –Power System (Full Time)

	Prerequisite: UG level Mathematics	Ty	3	1/0	0/0	4

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Describe and analyze the statistical methods.
2. Student will be gaining knowledge of linear programming problem
3. Having critical thinking and innovative skills

COURSE OUTCOMES (COs) : The students will be able to

CO1	To be able to understand Random variable
CO2	To Understand the relation between probability and statistics
CO3	To Use numerical methods to solve algebraic and transcendental equations.
CO4	To analyze the advanced matrix theory
CO5	To Understand the concepts linear programming problem

Mapping of Course Outcomes with Program Outcomes (POs)

	√								

EMMA22012 RANDOM PROCESS AND OPTIMIZATION TECHNIQUES 3 1/0 0/ 0 4

UNIT I RANDOM VARIABLES 12 hours

Random variables – Distribution functions – Moments – Moment generating functions – Two dimensional Random variables – Marginal and conditional distributions.

UNIT II RANDOM PROCESS 12 hours

Classification of Random Process – Stationary Process – Ergodic Process – Markov Process – Markov Chains – Auto Correlation – Auto Covariance – Cross Correlation – Cross Covariance – Spectral Density.

UNIT III SOLUTION OF EQUATIONS 12 hours

Solution of Algebraic and Transcendental equations – Method of false position – Iteration method – Newton-Raphson method – Solution of Linear system of equations – Gauss Elimination method – Gauss-Jordan method – Iterative methods – Gauss-Jacobi method – Gauss-Seidel method – Matrix Inversion by Gauss-Jordan method.

UNIT IV ADVANCED MATRIX THEORY 12 hours

Generalized Eigen vectors – Jordan canonical form – Matrix norms – QR algorithm – Pseudo inverse – Singular value decomposition – Least square solutions.

UNIT V LINEAR PROGRAMMING 12 hours

Formulation of LPP – Standard form of LPP – Graphical method – Simplex method – Big M method – Two phase method.

Total no. of hours: 60

Course Code: EMPS22001	Course Title: POWER SYSTEM DYNAMICS AND CONTROL	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: Electrical Machines, Control System , Power system	Ty	3	1/0	0/0	4

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Understand the fundamental dynamic behavior of power systems to perform basic stability issues
2. Acquire fundamental knowledge about modeling and dynamics of synchronous machines.
3. Derive Single and Multi-machine power system dynamic models.
4. Analyze methods of small-signal stability analysis of power system.
5. Realize about Transmission and Machine models and the effect of transients in transmission models.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Choose the fundamental dynamic behavior and controls of power systems to perform basic stability analysis.
CO2	Comprehend the concepts in modeling and simulating the dynamic phenomena of power systems and Interpret results of system stability studies.
CO3	Ability to analyze the single and Multi-machine power system.
CO4	Analyze the theory and practice the concept of small signal stability of a single-machine infinite bus system.
CO5	Model the transmission and synchronous machines and analyze the transient stability.

				√					

EMPS22001 POWER SYSTEM DYNAMICSAND CONTROL 3 1/0 0/0 4

UNIT I BASIC CONCEPTS AND REVIEW OF CLASSICAL METHODS 12 hours

Introduction on Power System Stability –Review on the States of Operation and System Security - System Dynamic Problems - Current Status and Recent Trends - System Model - Some Mathematical Preliminaries - Analysis of Steady State Stability - Analysis of Transient Stability - Simplified Representation of Excitation Control.

UNIT II SYNCHRONOUS MACHINE DYNAMIC MODELING AND CONTROL 12 hours

Dynamic Modeling:Introduction - Three-Damper-Winding Model - Transformations and Scaling - Linear Magnetic Circuit - Nonlinear Magnetic Circuit - Single-Machine Steady State - Operational Impedances and Test Data.
Control Models:Voltage and Speed Control Overview - Exciter Models - Voltage Regulator Models - Turbine Models - Speed Governor Models – Problems.

UNIT III SINGLE AND MULTIMACHINE DYNAMIC MODELS 12 hours

Single Model:Multi-Time-Scale Model - Elimination of Stator/Network Transients - Two-Axis Model - One-Axis (Flux-Decay) Model - Classical Model - Damping Torques - Synchronous Machine Saturation – Problems.
Multimachine Model:Synchronously Rotating Reference Frame - Network and R-L Load Constraints - Elimination of Stator/Network Transients - Two-Axis Model - Flux{Decay Model - Classical Model - Damping Torques - Saturation - Frequency during Transients - Angle References and an Infinite Bus.

UNIT IV SMALL SIGNAL STABILITY 12 hours

Basic Linearization Technique: Linearization of Model A , Linearization of Model B - Participation Factors - Studies on Parametric effects:Effect of loading - Effect of K_A - Effect of type of load - Hopf bifurcation - Electromechanical Oscillatory Modes - Power System Stabilizers: Basic approach - Derivation of K1- K6 constants - Synchronizing and damping torques - Power system stabilizer design-Problems.

UNIT V TRANSMISSION LINES AND DYNAMICS OF A SYNCHRONOUS GENERATOR 12 hours

Transmission Lines -D-Q Transformation using α - β Variables – Loads. Electromagnetic Transients: Fastest Transients - Transmission Line Models - Solution Methods. Dynamics of a Synchronous Generator Connected to

Infinite Bus: System Model - Synchronous Machine Model - Application of Model - Calculation of Initial Conditions - System Simulation - Consideration of other Machine Models.

EMPS22L01	**POWER SYSTEM DYNAMICSAND CONTROL LAB**	**0**	**0/0**	**4/0**	**2**

LIST OF EXPERIMENTS

1. Design and analyze the dynamic modeling of the synchronous generator.
2. Design an excitation system for synchronous machine and regulate its terminal voltage in generating mode.
3. Perform a small-signal stability analysis of single machine-infinite bus system using classical machine model.
4. Perform a small-signal stability analysis of multi-machine-infinite bus system using classical machine model.
5. Design a power system stabilizer.
6. Electromagnetic Transients in Power systems: Transmission Line Energization.

Total no.of hours:45

Course Code: EMPS22L02	Course Title: RENEWABLE ENERGY LAB	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: Non-Conventional Sources, HVDC	Lb	0	0/0	4/0	2

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Obtain knowledge about specific wind power, calculate the wind frequency, turbines characteristics, time period and frequency of the rotating turbine at different speeds.
2. Analyze the Characteristics of Solar Modules when connected in series and parallel
3. Understand the modeling, simulation, implementation and performance characteristics of solar photovoltaic and wind turbine.
4. Design and simulate the performance characteristics of a Micro-grid.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Choose and design a wind turbine depending upon the generated wind power, turbines characteristics, performance of turbine at different speeds.
CO2	Design a PV system depending upon the illumination effect on PV Modules, effect of Temperature, effect of Shading on PV Modules and effect of angle of inclination of Solar Modules.
CO3	Comprehend the Characteristics of Solar Modules when connected in series and parallel in real time applications.
CO4	Design and determine the performance characteristics of solar photovoltaic and wind turbine in hybrid mode.
CO5	Design, simulate and test the performance characteristics of a Micro-grid.

EMPS22L02 **RENEWABLE ENERGY LAB** **0 0/0 4/0 2**

List of Experiments

1. Modeling of PV cell.
2. Modeling of Wind Turbine.
3. Analysis of the characteristics of charging and discharging of battery.
4. Design of solar PV boost converter using P&O MPPT technique.
5. Analyze the current waveform for linear & non-linear loads & calculations for grid tied PV system..
6. Impact of transmission line inductance on voltage quality at PCC.
7. Power factor correction using capacitor bank and its impact on power quality at PCC.
8. Design hybrid micro grid integration with grid and analyze the power flow.

Total no.of hours:45

ourse Code: EMCC22001	Course Title: RESEARCH METHODOLOGY AND IPR	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: Core Subjects	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: The goal is to emphasize the importance of innovation and creativity by understanding the research concept and ethics which will aid to build the nation IPR status.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Understand research problem formulation by Analyzing research related information and its execution by following research ethics
CO2	Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
CO3	Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.
CO4	Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

							√		

EMCC22001 RESEARCH METHODOLOGY AND IPR 3 0/0 0/0 3

UNIT I SELECTION, ANALYSIS AND STATEMENT OF THE RESEARCH PROBLEM 9 hours

Literature Review and Formulation of Objectives – using the following Critical thinking Skills – Drawing a Concept map, Oral Communication, Debating, Questioning, Collaborating, Evaluation and Reasoning

UNIT II RESEARCH DESIGN 9 hours

Types of Study, Types of Data, Measures of Variability, Setting up the Hypotheses, data collection techniques and tools, sampling, Describing data – Charts and graphs ; Data processing – Categorization, coding, summarization.

UNIT III DATA ANALYSIS AND REPORT WRITING 9 hours

Statistical measures, Regression and correlation, significance test; Report writing – Purpose, format, content, editing and evaluation. Using Citation tools; Report for specific purposes – Theses, Journals, Grant application. Oral presentation to an audience; use of project management digital tools and plagiarism checking.

UNIT IV INTRODUCTION TO INTELLECTUAL PROPERTY 9 hours

Types of intellectual property rights – Patent, Copyright, Trade Mark, Industrial Design, Geographical Indication, Trade Secrets - Traditional Knowledge. Elements of Patentability - Novelty, Non Obviousness (Inventive Steps), Industrial Application – Non patentable inventions – Process of patenting – National and International – Form and Fees for IP India

UNIT V PRIOR ART SEARCH, PATENT DRAFTING 9 hours

Drafting patent Claims – Types of claims - Registration Procedure, Rights and Duties of Patentee; Patent infringement; Licensing – Franchising - Joint ventures; Non-Disclosure Agreements (NDAs) - Material Transfer Agreements (MTAs).

Total no. of hours: 45

Course Code: EMPS22002	Course Title: POWER SYSTEM ANALYSIS	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: Circuit Theory, Electrical Machines, Power System	Ty	3	1/0	0/0	4

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Study various methods of load flow and their advantages and disadvantages.
2. Acquire fundamental knowledge on various types of faults in power system.
3. Understand power system security concepts and study the methods to rank the contingencies.
4. Gain knowledge of simple algorithms for state estimation.
5. Analyze voltage instability phenomenon.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Calculate voltage phasors at all buses , given the data using various methods of load flow.
CO2	Estimate the fault currents in each phase.
CO3	Rank various contingencies according to their severity.
CO4	Analyze the efficient algorithm to determine various parameters.
CO5	Determine the stability and instability of a power system.

Mapping of Course Outcomes with Program Outcomes (POs)

EMPS22002 **POWER SYSTEM ANALYSIS** **3 1/0 0/0 4**

UNIT I LOAD FLOW **12 hours**

Over view of Newton-Raphson, Gauss Seidal – Fast Decoupled methods-Convergence Properties- Sparsity Techniques – Handling Q-max- violations in constant matrix, inclusion in frequency effects- AVR in load flow, handling of discrete variable in load flow.

UNIT II FAULT ANALYSIS **12 hours**

Simultaneous faults - open conductors faults- generalized method of fault analysis.

UNIT III SECURITY ANALYSIS **12 hours**

Security state diagram, contingency analysis, generator shift distribution factors- line outage distribution factor, multiple line outages -overload index ranking – Power System Equivalents –WARD –REI Equivalents.

UNIT IV STATE ESTIMATION **12 hours**

Sources of errors in Measurement – Virtual and Pseudo – measurement – Observability – Tracking State Estimation – WSL Method –Bad Data Correction.

UNIT V VOLTAGE STABILITY **12 hours**

Voltage Collapse- P-V Curve, Multiple Power Flow Solution – Continuation Power Flow – Optimal Multiples Load Flow – Voltage Collapse Proximity Indices.

OBJECTIVE: Students will be able to

1. Study of numerical relays.
2. Develop mathematical approach towards protection.
3. Study of algorithms for numerical protection.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Determine the position placement of Digital Relays.
CO2	Apply Mathematical approach towards protection.
CO3	Learn to develop various efficient Protection algorithms to be implemented in power system.

EMPS22003 DIGITAL PROTECTION OF POWER SYSTEM 3 0/0 0/0 3

UNIT I RELAYS 9hours

Evolution of digital relays from electromechanical relays - Performance and operational characteristics of digital protection- Mathematical background to protection algorithms - Finite difference techniques.

UNIT II NUMERICAL METHODS 9hours

Interpolation formulae - Forward, backward and central difference interpolation -Numerical differentiation -Curve fitting and smoothing -Least squares method -Fourier analysis -Fourier series and Fourier transform -Walsh function analysis.

UNIT III DIGITAL PROTECTION 9hours

Basic elements of digital protection -Signal conditioning: transducers, surge protection, analog filtering, analog multiplexers -Conversion subsystem: the sampling theorem, signal aliasing -Error, sample and hold circuits, multiplexers, analog to digital conversion - Digital filtering concepts -The digital relay as a unit consisting of hardware and software.

UNIT IV ALGORITHMS 9hours

Sinusoidal wave based algorithms -Sample and first derivative (Mann and Morrison) algorithm. -Fourier and Walsh based algorithms.

UNIT V ADVANCEMENT IN PROTECTION 9hours

Fourier Algorithm: Full cycle window algorithm, fractional cycle -window algorithm. -Walsh function based algorithm -Least Squares based algorithms. Differential equation based algorithms. -Traveling Wave based Techniques -Digital Differential Protection of Transformers -Digital Line Differential Protection -Recent Advances in Digital Protection of Power Systems.

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Model the transmission lines.
2. Perform various power and load flow analysis.
3. Ability to acquire knowledge on transient and short circuit analysis.
4. Gain knowledge on fault analysis on transmission line models.
5. Forecast load and estimate the economic load dispatch in power systems.
6. Familiar about Voltage Security in power system.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Comprehend the concepts in modeling transmission lines under normal and fault conditions.
CO2	Analyze the load and power flow performance in power system.
CO3	Determine the effect of the transient and short circuit fault in a power system and analysis the impact.
CO4	Estimate the economic load dispatch in power system.
CO5	Assess the methods to secure power system.

OBJECTIVE: Students will be able to

1. Understand the operating characteristics and testing of Current Transformers, Potential Transformers and Circuit Breaker.
2. Analyze the performance of various relays.
3. Model various relays.
4. Testing the operation of various relays.
5. Design and test the Reverse power protection and losses in generators.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Comprehend the ability to understand the operating characteristics and testing of Current Transformers, Potential Transformers and Circuit Breaker.
CO2	Ability to determine the selection of relays based on the application in power system.
CO3	Gain the knowledge of to model the relays.
CO4	Understand the testing concepts of relays in power system.
CO5	Design and simulate to protect the generators and analyze the losses occurring.

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Understand concept of smart grid and its advantages over conventional grid.
2. Know smart metering techniques.
3. Learn wide area measurement techniques.
4. Understanding the problems associated with integration of distributed generation & its solution through smart grid.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Comprehend the difference between smart grid & conventional grid.
CO2	Apply smart metering concepts to industrial and commercial installations.
CO3	Ability to formulate the solutions in the areas of smart substations , distributed generation and wide area measurements.
CO4	Model the smart grid solutions using modern communication technologies.

				√					

EMPS22004 **SMART GRID** **3 0/0 0/0 3**

UNIT I INTRODUCTION TO SMART GRID **9 hours**

Introduction to Smart Grid, Evolution of Electric Grid - Concept of Smart Grid, Definitions - Need of Smart Grid, Concept of Robust & Self Healing Grid Present development & International policies in Smart Grid Introduction to Smart Meters, Real Time Prizing, Smart Appliances - Automatic Meter Reading(AMR) - Outage Management System(OMS) - Plug in Hybrid Electric Vehicles(PHEV), Vehicle to Grid, Smart - Sensors, Home & Building Automation - Smart Substations, Substation Automation, Feeder Automation .

UNIT II WIDE AREA MEASUREMENT **9 hours**

Geographic Information System(GIS) - Intelligent Electronic Devices(IED) & their application for monitoring & protection, Smart storage like Battery, SMES, Pumped Hydro - Compressed Air Energy Storage, Wide Area Measurement System(WAMS) -Phase Measurement Unit(PMU).

UNIT III MICROGRID **9 hours**

Concept of micro-grid, need & applications of micro-grid, formation of micro-grid, Issues of interconnection, protection & control of micro-grid - Plastic & Organic solar cells, Thin film solar cells, Variable speed wind generators, fuel-cells, micro-turbines - Captive power plants, Integration of renewable energy sources.

UNIT IV POWER QUALITY IN SMART GRID **9 hours**

Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources - Power Quality Conditioners for Smart Grid- Web based Power Quality monitoring - Power Quality Audit.

UNIT V COMPONENTS IN SMART GRID **9 hours**

Advanced Metering Infrastructure (AMI), Home Area Network (HAN) - Neighborhood Area Network (NAN), Wide Area Network (WAN) -Bluetooth, ZigBee, GPS, Wi-Fi, Wi-Max based communication -Wireless Mesh Network, Basics of CLOUD Computing & Cyber Security for Smart Grid Broadband over Power line (BPL) -IP based protocols.

Total no. of Hours: 45

Suggested Reading:

PROGRAM ELECTIVES

Course Code: EMPS22E01	Course Title: HIGH POWER CONVERTERS	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: Control System ,Power system	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Understand the power devices used in high power converters.
2. Acquire knowledge of different converter topologies.
3. Learn the different control strategies suitable for converters.
4. Analyze and model the converters to be used in power system.
5. Gain knowledge to select the type of converters applicable for specific applications.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Learn the characteristics of power semiconductor devices and use them in designing the circuits.
CO2	Analyze the different topologies of the converters and use it according to the application.
CO3	Ability to analyze and decide the efficient control strategy suitable for specific converters.
CO4	Comprehend and model the converters to be implemented in power system.
CO5	Design various converters to be implemented based on the application.

EMPS22E01 **HIGH POWER CONVERTERS** **3 0/0 0/0 3**

UNIT I INTRODUCTION TO CONVERTERS **9 hours**

Basic introduction to power devices:SCR, MOSFET,IGBT,TRIAC-Introduction to power Converters: Half ,Full Bridge operation-single and three phase-Modulation techniques ,harmonics in sinusoidal PWM,Space vector modulation.

UNIT II MULTILEVEL INVERTERS **9 hours**

Introduction to Multilevel inverters:Two level voltage source inverter- Diode clamped multilevel inverters-flying capacitor multilevel inverter- Neutral point clamped converter-Cascaded H- bridge multilevel inverter:output waveform synthesis,Phase shift PWM,Level shift PWM-Fault tolerant operation.

UNIT III MODULAR MULTILEVEL CONVERTER **9 hours**

Introduction to Modular Multilevel Converter(MMC): Topology and operation-Arm and Cell voltage ratings , arm currents ,arm energy balance-Different MMC circuit topologies-PWM Techniques- Capacitor voltage balancing- Fault tolerant operation.

UNIT IV CONTROLLERS **9 hours**

Switched mode power converters: objective ,control implications- Feedback control: single and multi loop- cascaded SMPC-Variable frequency control-constant on time control methods- constant off time control methods-hysteresis control method-sliding mode control.

UNIT V MODELLING OF CONVERTERS **9 hours**

Overview of modeling techniques-Design aspects of converters- -Small signal analysis of converters: Derivation of transfer functions-Closed current loop-Impedance analysis and Stability.

Total no. of hours: 45

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Understand the current energy scenario, energy conservation, audit and management.
2. Gain the knowledge to calculate the efficiency of various thermal utilities.
3. Analyze the various energy monitoring system and optimization techniques.
4. Inculcate systematic knowledge and skill about assessing the energy efficiency, energy auditing and energy management.
5. Acquire the need and methods of energy conservation.

COURSE OUTCOMES (COs) : The students will be able to

CO1	apply the knowledge of the subject to calculate the efficiency of various thermal utilities.
CO2	design suitable energy monitoring system to analyze and optimize the energy consumption in an organization.
CO3	use the energy audit methods learnt to identify the areas deserving tighter control to save energy expenditure.
CO4	Comprehend and carry out the cost- benefit analysis of various investment alternatives for meeting the energy needs of the organization.
CO5	guide the employees of the organization about the need and the methods of energy conservation.

EMPS22E02 **ENERGY AUDITING , CONSERVATION AND MANAGEMENT** **3 0/0 0/0 3**

UNIT I ENERGY SCENARIO AND BASICS OF ENERGY ITS VARIOUS FORMS AND CONSERVATION

9 hours

Commercial and Non-commercial energy, primary energy resources, commercial energy production, final energy consumption, Indian energy scenario, sectoral energy consumption (domestic, industrial and other sectors), energy needs of growing economy, energy intensity, long term energy scenario, energy pricing, Energy security, energy conservation and its importance, energy strategy for the future, Energy Conservation Act 2001 and its features.Thermal Basics-fuels, thermal energy contents of fuel, temperature and pressure, heat capacity, sensible and latent heat, evaporation, condensation, steam, moist air and humidity and heat transfer.

UNIT II THERMAL PERFORMANCE **9 hours**

Calculation of heat loss - heat gain, estimation of annual heating & cooling loads, factors that influence thermal performance, analysis of existing buildings setting up an energy management programme and use management - electricity saving techniques. Energy efficiency in thermal utilities like boilers, furnaces, pumps and fans , compressors, cogeneration (steam and gas turbines), heat exchangers ,lighting system, Motors belts and drives, refrigeration system. Heat Recovery and Co-generation:Heat recovery from ventilation, air co-generation of heat and electricity, heat recovery and bottoming cycles.

UNIT III ENERGY MANAGEMENT AND AUDIT **9 hours**

Definition, energy audit, need, types of energy audit. Energy management (audit) approach-understanding energy costs, 3.1 Bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirements, fuel and energy substitution, energy audit instruments and metering.

UNIT IV ENERGY MONITORING AND TARGETING **9 hours**

Defining monitoring & targeting, elements of monitoring & targeting, data and information-analysis, techniques - energy consumption, production, cumulative sum of differences (CUSUM). Energy Management Information Systems (EMIS).

UNIT V FINANCIAL MANAGEMENT **9 hours**

Investment-need, appraisal and criteria, financial analysis techniques simple payback period, return on investment, net present value, internal rate of return, cash flows, risk and sensitivity analysis; financing options, energy performance contracts and role of Energy Service Companies (ESCOs).

Total no. of hours: 45

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Understand the necessity of optimization techniques in power system.
2. Create an Engineering design methodology using a mathematical formulation of a design problem to support selection of the optimal design among alternatives.
3. Ability to learn various algorithms.
4. Determine the effective optimization techniques for specific applications in power system.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Gain valuable insights into the fundamentals of various optimization techniques.
CO2	Comprehend and apply the theory of optimization methods and algorithms to develop and for solving various types of optimization problems.
CO3	Ability to go in research by applying optimization techniques in problems of Engineering and Technology.
CO4	Solve the mathematical results and numerical techniques of optimization theory to concrete Engineering problems by using computer software.

EMPS22E03 OPTIMIZATION TECHNIQUES 3 0/0 0/0 3

UNIT I FUNDAMENTALS OF OPTIMIZATION TECHNIQUES 9 hours

Fundamentals of optimization techniques: Definition-Classification of optimization problems-Unconstrained and Constrained optimization-Optimality conditions-Classical Optimization techniques (Lamda Iteration method, Linear programming, Quadratic programming).

UNIT II LAMDA ITERATION METHOD 9 hours

Brief introduction to lamda iteration method, formulate the Lagrange function, Lamda iteration method to solve Optimal dispatch problem.

UNIT III QUADRATIC PROGRAMMING AND LINEAR PROGRAMMING 9 hours

Introduction to quadratic programming-Working principle, sequential programming-Linear constrained optimization problem, Karush-Kuhn-Tucker conditions and its application to solve various problems-Interior point method,-lagrangian duality.Linear programming:Examples of linear programming problem-Simplex Method I-Fundamental theorem of linear programming-Weak and strong duality theorems-Integer programming-Network flow-develop a linear programming model from problem description.

UNIT IV GENETIC ALGORITHM 9 hours

Introduction to genetic Algorithm - Working principle - Principles of Genetic Algorithm- Evolutionary Strategy and Evolutionary Programming - Genetic Operators-Selection - Crossover and Mutation fitness function - GA operators-Similarities and differences between GA and traditional methods- Unconstrained and constrained optimization using Genetic Algorithm- Algorithms and flow chart for solving economic load dispatch and hydro-thermal scheduling problem.

UNIT V PARTICLE SWARM OPTIMIZATION 9 hours

Fundamental principle-Velocity Updating-Advanced operators-Parameter selection- Hybrid approaches (Hybrid of GA and PSO, Hybrid of EP and PSO) -Binary, discrete and combinatorial. Algorithms and flow chart of various for solving economic load dispatch and hydro-thermal scheduling problem.

Total no. of Hours: 45

Course Code: EMPS22E04	Course Title: DYNAMICS OF ELECTRICAL MACHINES	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: Power system ,Electrical Machines.	**Ty**	**3**	**0/0**	**0/0**	**3**

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Learn the performance characteristics of machines
2. Gain knowledge how to model machines.
3. To understand the dynamics of the machines.
4. To analyze how to determine stability of machines.
5. Acquire knowledge about the transient conditions of synchronous machines.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Derive Kron's Primitive machine as an unified electrical machine model.
CO2	design the mathematical model and control a 3- phase Induction motor.
CO3	Analyze asymmetrical 2-phase induction motor.
CO4	Comprehend and derive the mathematical model of a separately excited DC motor and DC Series motor.
CO5	Determine a wide range of applications in electric power engineering careers.

EMPS22E04 DYNAMIC OF ELECTRICAL MACHINES 3 0/0 0/0 3

UNIT-I: MODELING CONCEPTS 9 hours

Basic Two-pole machine representation of commutator machines, 3-ph synchronous machine with and without damper bars and 3-ph induction machine, Kron's primitive machine-voltage, current and torque equations. Real time model of a two phase induction machine-transformation to obtain constant matrices-thee phase to two phase transformation- power equivalence.

UNIT-II MODELING OF THREE PHASE INDUCTION MACHINE 9 hours

Generalized model in arbitrary reference frame- Electromagnetic torque – Derivation of commonly used induction machine models- Stator reference frame modelRotor reference frame model- Synchronously rotating frame model- Equations in flux linkages - per unit model-Dynamic Simulation- Small signal equations of induction machine – derivation DQ flux linkage model derivation – control principle of Induction machine.Signal Transient - Small Oscillation Equations in State Variable form - Dynamical Analysis of Interconnected Machines.

UNIT-III SYMMETRICAL AND UNSYMMETRICAL 2 PHASE INDUCTION MACHINE 9 hours

Analysis of symmetrical 2 phase induction machine-voltage and torque equations for unsymmetrical 2 phase induction machine voltage and torque equations in stationary reference frame variables for unsymmetrical 2 phase induction machine-analysis of steady state operation of unsymmetrical 2 phase induction machine- single phase induction motor - Cross field theory of single-phase induction machine.

UNIT-IV SYNCHRONOUS MACHINE MODELING 9 hours

Mathematical model of a sep. excited DC motor- steady state and transient analysis - Transfer function of a sep. excited DC motor – Mathematical model of a DC series motor, shunt motor ,linearization techniques for small perturbations. Synchronous machine inductances – voltage equations in the rotor's DQ0 reference frame-electromagnetic torque-current in terms of linkages.

UNIT-V DYNAMIC ANALYSIS OF SYNCHRONOUS MACHINE 9 hours

Dynamic performance of synchronous machine, three-phase fault, comparison of actual and approximate transient torque characteristics, Equal area criteria- simulation of three phase synchronous machine – modeling of PMSM.

Total no. of Hours: 45

	Prerequisite: Power system ,Electrical Machines.	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Explain the concept of wind and solar energy systems.
2. Provide the students a deep insight in to the integration of power electronics converters with PV and wind energy sources.
3. Acquire knowledge about how to integrate power electronic converters with renewable energy sources.
4. Expose to study various maximum power point tracking (MPPT) techniques of wind and PV energy systems.
5. Inculcate on the need for hybrid energy systems and issues associated with it.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Explain the wind and solar energy conversion.
CO2	Design power electronic converters for stand-alone and grid tied wind and solar systems.
CO3	Ability of integrating power electronic converters with renewable energy sources.
CO4	Comprehend and Skill in developing MPPT techniques for wind and PV systems.
CO5	Develop proficiency in design and development of hybrid energy systems.

EMPS22E05 **WIND AND SOLAR SYSTEMS** **3 0/0 0/0 3**

UNIT I SOURCES OF ENERGY **9 hours**

Renewable energy sources and features. Introduction to wind and solar energy. Wind Energy: General theories of wind machines: Basic laws and concept of aerodynamics, efficiency limit for wind energy conversion. Description and performances of horizontal axis wind turbine: Design of the blades and determination of forces acting on the wind power plant, power - speed and torque - speed characteristics of wind turbines, wind turbine control systems. Description and performances of vertical axis wind turbine.

UNIT II DESIGN AND OPERATION OF WIND POWER SYSTEM **9 hours**

Induction and synchronous generators, grid connected and self-excited induction generator operation, generation schemes with variable speed turbines, constant voltage and constant frequency generation with power electronic control, Optimized control of induction generators and synchronous generators. Reactive power compensation, Types of converters, Type of wind energy conversion system, MPPT techniques for wind electrical systems.

UNIT III DESIGN AND OPERATION OF PV SYSTEM AND BATTERIES **9 hours**

Solar processes and spectral composition of solar radiation , Radiation flux at the Earth's surface, solar collectors, types and performance characteristics, applications. Solar Photovoltaic systems: Operating principle, photovoltaic cell concepts, cell, module, array, series and parallel connections. Solar PV system design and PV MPPT techniques. Applications Basics of Batteries: Types and parameters of batteries for PV systems, series and parallel connections and performance characteristics.

UNIT IV GRID INTEGRATION AND HYBRID ENERGY SYSTEM **9 hours**

Grid integration of wind and PV systems, charge controllers ,General overview of distributed generation ; Hybrid energy systems: Wind-Diesel hybrid system, Wind-solar hybrid system, System with energy storage, Special purpose applications.

UNIT V WIND AND SOLAR ENERGY SYSTEM ECONOMICS **9 hours**

Overview of economic assessment, capital, operation and maintenance costs of wind and solar energy systems, comparison of alternative energy systems using life cycle cost analysis.

Total no. of Hours: 45

Suggested Reading:

	Prerequisite: Basic electrical and electronics engineering ,Electrical Machines, IC Engines.	**Ty**	**3**	**0/0**	**0/0**	**3**

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Explain the concept of Electric and Hybrid Electric Vehicles.
2. Gain deep insight knowledge in vehicle traction
3. Acquire knowledge about DC drives and energy storage systems.
4. To understand different aspects of drives application.
5. Determine an efficient management strategy and communication protocol.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Build a basic model of Electric and Hybrid Electric Vehicles.
CO2	Choose a suitable drive scheme for developing an electric hybrid vehicle depending on resources.
CO3	Design and develop basic schemes of electric vehicles and hybrid electric vehicles.
CO4	Choose proper energy storage systems for vehicle applications.
CO5	Identify various communication protocols and technologies used in vehicle networks.

					√				

EMPS22E06 ELECTRIC AND HYBRID VEHICLES 3 0/0 0/0 3

UNIT I HYBRID AND ELECTRIC VEHICLES **9 hours**

Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies. Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization, transmission characteristics, mathematical models to describe vehicle performance.

UNIT II HYBRID TRACTION **9 hours**

Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis. Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis.

UNIT III DC DRIVES AND ENERGY STORAGE **9 hours**

Electric Propulsion unit: Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives. Energy Storage: Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT IV SIZING THE DRIVE SYSTEM **9 hours**

Matching the electric machine and the internal combustion engine (ICE)- Sizing the propulsion motor, sizing the power electronics Selecting the energy storage technology.

UNIT V ENERGY MANAGEMENT **9 hours**

Communications, supporting subsystems: CAN control system, Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies

Total no. of Hours: 45

Suggested Reading:

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Calculate the transmission line parameters.
2. Derive the field effect on EHV and UHV AC lines.
3. Acquire knowledge on corona, RI and audible noise in EHV and UHV lines.
4. Gain knowledge of voltage control and compensation problems in EHV and UHV transmission systems.
5. Learn various compensation methods.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Calculate the transmission line parameters.
CO2	Calculate the field effects on EHV and UHV AC lines.
CO3	Determine the corona, RI and audible noise in EHV and UHV lines
CO4	Analyze voltage control and compensation problems in EHV and UHV transmission systems.
CO5	Understand reactive power compensation using SVC and TCR.

					√				

EMPS22E07 EHVAC TRANSMISSION 3 0/0 0/0 3

UNIT I INTRODUCTION OF EHVAC TRANSMISSION 9 hours

E.H.V. A.C. Transmission, line trends and preliminary aspects, standard transmission voltages :power handling capacities and line losses, mechanical aspects. Calculation of line resistance and inductance: resistance of conductors, temperature rise of conductor and current carrying capacity. Properties of bundled conductors and geometric mean radius of bundle, inductance of two conductor lines and multi conductor lines, Maxwell's coefficient matrix. Line capacitance calculation. Capacitance of two conductor line, and capacitance of multi conductor lines, potential coefficients for bundled conductor lines, sequence inductances and capacitances and diagonalization.

UNIT II EFFECTS OF ELECTRO STATIC FIELD 9 hours

Calculation of electro static field of AC lines - Effect of high electrostatic field on biological organisms and human beings. Surface voltage Gradient on conductors, surface gradient on two conductor bundle and cosine law, maximum surface voltage gradient of bundle with more than 3 sub conductors, Mangoldt formula.

UNIT III CORONA 9 hours

Corona in EHV lines ,corona loss formulae ,attenuation of traveling waves due to corona ,Audio noise due to corona, its generation, characteristics and limits, measurement of audio noise.

UNIT IV POWER FREQUENCY VOLTAGE CONTROL 9 hours

Problems at power frequency, generalized constants, No load voltage conditions and charging currents, voltage control using synchronous condenser, cascade connection of components : Shunt and series compensation, sub synchronous resonance in series ,capacitor compensated lines.

UNIT V REACTIVE POWER COMPENSATING SYSTEMS 9 hours

Introduction, SVC schemes, Harmonics injected into network by TCR, design of filters for suppressing harmonics

injected into the system.

Total no. of Hours: 45

Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Explain the concept of conventional power generation systems.
2. Illustrate the concept of distributed generation.
3. To analyze the impact of grid integration.
4. Gain deep insight knowledge in designing a microgrid.
5. Acquire knowledge about power quality issues and controlling aspects in microgrid.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Review the conventional power generation
CO2	Analyze the concept of distributed generation and installation
CO3	Design the grid integration system with conventional and non-conventional energy sources.
CO4	Design the DC and AC micro grid.
CO5	Analyze power quality issues and control operation of micro grid.

EMPS22E08 DISTRIBUTED GENERATION AND MICRO GRID 3 0/0 0/0 3

UNIT I INTRODUCTION **9 hours**

Conventional power generation: advantages and disadvantages, Energy crises, Non - conventional energy (NCE) resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.

UNIT II DISTRIBUTED GENERATIONS **9 hours**

Concept of distributed generations, topologies, selection of sources, regulatory standards/ framework, Standards for interconnecting Distributed resources to electric power systems: IEEE 1547. DG installation classes, security issues in DG implementations. Energy storage elements: Batteries, ultra-capacitors, flywheels. Captive power plants.

UNIT III IMPACT OF GRID INTEGRATION **9hours**

Requirements for grid interconnection, limits on operational parameters,: voltage, frequency, THD, response to grid abnormal operating conditions, islanding issues. Impact of grid integration with NCE sources on existing power system: reliability, stability and power quality issues.

UNIT IV BASICS OF MICROGRID **9hours**

Concept and definition of microgrid, microgrid drivers and benefits, review of sources of microgrids, typical structure and configuration of a microgrid, AC and DC microgrids, Power Electronics interfaces in DC and AC microgrids.

UNIT V CONTROL AND OPERATION OF MICROGRID **9 hours**

Modes of operation and control of microgrid: grid connected and islanded mode, Active and reactive power control, protection issues, anti-islanding schemes: passive, active and communication based techniques, microgrid communication infrastructure, Power quality issues in microgrids, regulatory standards, Microgrid economics, Introduction to smart microgrids.

OBJECTIVE: Students will be able to

1. Study details of various energy storage systems along with applications.
2. Analyze the operation of different energy storage systems.
3. Learn about batteries.
4. Acquire knowledge about Fuel cells.
5. Enabling to identify the optimal solutions to a particular energy storage application/utility.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Understand need of energy storage systems
CO2	Acquire knowledge pertaining to various ways to store energy, its analysis and use.
CO3	Design different energy storage systems.
CO4	Determine the operation of fuel cells.
CO5	Focus and select efficient energy storage systems for specific applications.

EMPS22E09 **ENERGY STORAGE SYSTEMS** **3 0/0 0/0 3**

UNIT I INTRODUCTION **9 hours**

Energy availability, Necessity of energy storage, different types of energy storage, mechanical, chemical, electrical, electrochemical, biological, magnetic, electromagnetic, thermal, comparison of energy storage technologies.

UNIT II ENERGY STORAGE SYSTEMS **9 hours**

Thermal Energy storage, sensible and latent heat, phase change materials, Energy and exergy analysis of thermal energy storage, Electrical Energy storage-super-capacitors, Magnetic Energy storage-Superconducting systems, Mechanical-Pumped hydro, flywheels and pressurized air energy storage.

UNIT III ELECTROCHEMICAL ENERGY STORAGE **9hours**

Battery: fundamentals and technologies, characteristics and performance comparison: Lead-acid, Nickel-Metal hydride, Lithium Ion; Battery system model, emerging trends in batteries. Hydrogen as energy carrier and storage, Hydrogen resources and production.

UNIT IV FUEL CELLS **9 hours**

Basic principle of direct energy conversion using fuel cells; Thermodynamics of fuel cells Fuel cell types: AFC, PEMFC, MCFC, SOFC, Microbial Fuel cell; Fuel cell performance, characterization and modeling; Fuel cell system design and technology, applications for power and transportation.

UNIT V APPLICATIONS OF ENERGY STORAGE **9 hours**

Renewable energy storage ,Battery sizing and stand-alone applications, stationary (Power Grid application), Small scale application :Portable storage systems and medical devices, Mobile storage Applications- Electric vehicles (EVs), types of EVs, batteries and fuel cells, future technologies, hybrid systems for energy storage.

Total no. of Hours: 45

Course Code: EMPS22E10	Course Title: ELECTRIC POWER DISTRIBUTION SYSTEM	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: Basic electrical and electronics engineering ,Transmission and Distribution.	**Ty**	**3**	**0/0**	**0/0**	**3**

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Learn about power distribution system
2. Analyze the interconnection of distribution.
3. Acquire knowledge about SCADA System.
4. Decide on the selection and placement of devices.
5. Understand how to maintain automated distribution system.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Determine the load forecasting and manage the distributed network.
CO2	Acquire knowledge pertaining to various methods of metering and controlling the parameters in interconnection of networks.
CO3	Design a SCADA automated system.
CO4	Analyze the distributed network and optimize the selection and placement of devices in a distributed system.
CO5	Implement an automated distribution system.

EMPS22E10 ELECTRIC POWER DISTRIBUTION SYSTEM 3 0/0 0/0 3

UNIT I DISTRIBUTION SYSTEM **9 hours**

Distribution of Power, Management, Power Loads - Load Forecasting Short-term & Long-term - Power System Loading, Technological Forecasting. Advantages of Distribution Management System (D.M.S.) Distribution Automation- Definition - Restoration / Reconfiguration of Distribution Network, Different Methods and Constraints -Power Factor Correction.

UNIT II INTERCONNECTION OF DISTRIBUTION **9 hours**

Control and Communication Systems - Remote Metering -Automatic Meter Reading and its implementation.

UNIT III SCADA **9 hours**

Introduction- Block Diagram-SCADA Applied To Distribution Automation- Common Functions of SCADA - Advantages of Distribution Automation through SCADA.

UNIT IV OPTIMIZATION IN DISTRIBUTION **9 hours**

Calculation of Optimum Number of Switches, Capacitors, Optimum Switching Device Placement in Radial - Distribution Systems, Sectionalizing Switches – Types, Benefits -Bellman's Optimality Principle - Remote Terminal Units -Energy efficiency in electrical distribution & Monitoring.

UNIT V MAINTENANCE OF AUTOMATED DISTRIBUTION SYSTEMS **9 hours**

Difficulties in Implementing Distribution Automation in Actual Practice- Urban/Rural Distribution- Energy Management- AI techniques applied to Distribution Automation.

Total no. of Hours: 45

Suggested Reading:

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Learn about difference between discrete-time and continuous-time signals
2. Study about the techniques for IIR and FIR filters.
3. Acquire knowledge about finite word length.
4. Gain knowledge about various signal models .
5. Understand how to design a FIR and IIR filter.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Differentiate between the time domain and frequency domain representations as well analyze the discrete time signals and systems.
CO2	Design and analyze the techniques for IIR and FIR filters and their realization structures.
CO3	Acquire knowledge about the finite word length effects in implementation of digital filters.
CO4	Knowledge about the various linear signal models and estimation of power spectrum of stationary random signals
CO5	Design optimum FIR and IIR filters

EMPS22E11 DIGITAL SIGNAL PROCESSING 3 0/0 0/0 3

UNIT I DISCRETE TIME SIGNALS **9 hours**

Discrete time signals - Linear shift invariant systems- Stability and causality -Sampling of continuous time signals Discrete time Fourier transform- Discrete Fourier series- Discrete Fourier transform - Z transform-Properties of different transforms.

UNIT II DISCRETE FOURIER TRANSFORM (DFT) **9 hours**

Linear convolution using DFT - Computation of DFT Design of IIR digital filters from analog filters -Impulse invariance method - Bilinear transformation method.

UNIT III FINITE IMPULSE RESPONSE(FIR) **9 hours**

FIR filter design using window functions - Comparison of IIR and FIR digital filters -Basic IIR and FIR filter realization structures - Signal flow graph representations Quantization process and errors - Coefficient quantization effects in IIR and FIR filters.

UNIT IV ANALOG TO DIGITAL CONVERSION **9 hours**

A/D conversion noise- Arithmetic round-off errors - Dynamic range scaling - Overflow oscillations and zero Input limit cycles in IIR filters - Linear Signal Models.

UNIT V POWER SPECTRUM **9 hours**

All pole, All zero and Pole-zero models - Power spectrum estimation- Spectral analysis of deterministic signals Estimation of power spectrum of stationary random signals - Optimum linear filters- Optimum signal estimation Mean square error estimation - Optimum FIR and IIR Filters.

Total no. of Hours: 45

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Learn about DC machines and Transformers.
2. Study about the dimensions in designing various machines.
3. Acquire knowledge about losses in machines.
4. Gain knowledge about harmonics.
5. Understand how to design an efficient machine.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Model the DC machines and Transformers.
CO2	Analyze the heating and cooling of DC machines, Induction motors and Synchronous machines.
CO3	Comprehend the losses occurring in machines.
CO4	Determine the harmonics and concentrate on the aspects in designing the machines in order to reduce the harmonics.
CO5	Design efficient machines.

EMPS22E12 POWER APPARATUS DESIGN 3 0/0 0/0 3

UNIT I DC MACHINES AND TRANSFORMERS **9 hours**

Principles of Design of Machines -Specific loadings, choice of magnetic and electric loadings - Real and apparent flux densities, temperature rise calculation, Separation of main dimension for DC machines - Induction machines and synchronous machines - Design of Transformers-General considerations, output equation, emf per turn, choice of flux density and current density, main dimensions, leakage reactance and conductor size, design of tank and cooling.

UNIT II INDUCTION AND SYNCHRONOUS MACHINES **9 hours**

Specific loadings, choice of magnetic and electric loadings Real and apparent flux -densities, temperature rise calculation - Separation of main dimension for DC machines - Induction machines and synchronous machines - Heating and cooling of machines, types of ventilation, continuous and intermittent rating.

UNIT III EMF EQUATIONS **9 hours**

General considerations, output equation, emf per turn, choice of flux density and current density, main dimensions, leakage reactance and conductor size, design of tank and cooling tubes - Calculation of losses, efficiency and regulation - Forces winding during short circuit.

UNIT IV HARMONICS **9 hours**

General considerations, output equation - Choice of specific electric and magnetic loadings, efficiency, power factor- Number of slots in stator and rotor - Elimination of harmonic torques.

UNIT V DESIGN OF ENERGY EFFICIENT OF MACHINES **9 hours**

Design of stator and rotor winding, slot leakage flux - Leakage reactance, equivalent resistance of squirrel cage rotor - Magnetizing current, efficiency from design data - Types of alternators, comparison, specific loadings, output co-efficient - design of main dimensions - Introduction to Computer Aided Electrical Machine Design Energy efficient machines.

	Prerequisite: Microprocessor and Microcontroller	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Learn about the computer organization.
2. Study about the architecture of advance microcontrollers.
3. Acquire knowledge about the programming.
4. Gain knowledge about the interfacing devices.
5. Understand about controllers and its applications.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Analyze the configuration of a computer and its protocols.
CO2	Understand the working of microcontrollers.
CO3	Learn how to program a processor in assembly language and develop an advanced processor based system.
CO4	Comprehend and configure the different peripherals which are interfaced with the microcontroller.
CO5	Frame the program and control the devices interfaced with the microcontroller.

EMPS22E13 ADVANCED MICRO-CONTROLLER BASED SYSTEMS 3 0/0 0/0 3

UNIT I COMPUTER ORGANIZATIONS **9 hours**

Basic Computer Organization- Accumulator based Processes-Architecture – Memory Organization-I/O Organization.

UNIT II MICRO-CONTROLLER **9 hours**

Micro-Controllers-Intel 8051 - Intel 8056- Registers, Memories - I/O Ports, Serial Communication – Timers – Interrupts – Programming.

UNIT III INTEL 8051 **9 hours**

Intel 8051 – Assembly language programming - Addressing-Operations - Stack & Subroutines - Interrupts-DMA.

UNIT IV INTERFACING **9 hours**

PIC 16F877- Architecture Programming - Interfacing Memory/ I/O Devices - Serial I/O and data communication.

UNIT V DSP **9hours**

Digital Signal Processor (DSP) - Architecture – Programming - Introduction to FPGA – Microcontroller development for motor control applications - Stepper motor control using micro controller.

OBJECTIVE: Students will be able to

1. Understand the importance of state estimation in power systems.
2. Know the importance of security and contingency analysis.
3. Acquire knowledge on SCADA, its objectives and its importance in power systems.
4. Learn the significance of voltage stability analysis.
5. Apply AI to power systems problems.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Understand state estimation, security and contingency evaluation.
CO2	Design a secured and perform contingency analysis in power systems.
CO3	Analyze and apply Supervisory control and data acquisition in power systems.
CO4	Real time software application to state estimation.
CO5	Build an efficient power system incorporating AI.

EMPS22E14 REAL TIME CONTROL OF POWER SYSTEMS 3 0/0 0/0 3

UNIT I STATE ESTIMATION 9 hours

Different types of State Estimations, Theory of WLS state estimation, sequential and non-sequential methods to process measurements, Bad data Observability, Bad data detection, identification and elimination.

UNIT II HYBRID TRACTION 9 hours

Security and Contingency Evaluation : Security concept, Security Analysis and monitoring, Contingency Analysis for Generator and line outages by iterative linear power flow method, Fast Decoupled model, and network sensitivity methods.

UNIT III DC DRIVES AND ENERGY STORAGE 9 hours

Computer Control of Power Systems: Need for real time and computer control of power systems, operating states of a power system, SCADA - Supervisory control and Data Acquisition systems implementation considerations, energy control centres, software requirements for implementing the above functions.

UNIT IV SIZING THE DRIVE SYSTEM 9 hours

Voltage Stability, voltage collapse, and voltage security, relation of voltage stability to rotor angle stability. Voltage stability analysis Introduction to voltage stability analysis `P-V' curves and `Q-V' curves, voltage stability in mature power systems, long-term voltage stability, power flow analysis for voltage stability, voltage stability static indices.

UNIT V ENERGY MANAGEMENT 9 hours

Synchrophasor Measurement units: Introduction, Phasor representation of sinusoids, a generic PMU, GPS, Phasor measurement systems, Communication options for PMUs, Functional requirements of PMUs and PDCs, Phasors for nominal frequency signals, types of frequency excursions in power systems, DFT estimation at off nominal frequency with a nominal frequency clock.

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Study about different power quality issues.
2. Gain knowledge about harmonics.
3. Learn about modeling of electrical devices.
4. Acquire knowledge about improving the power quality.
5. Understand about FACTs devices.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Identify the factors and devices that affect the power system.
CO2	Acquire knowledge about the harmonics, harmonic introducing devices and effect of harmonics on system equipment and loads
CO3	Develop analytical modeling skills needed for modeling and analysis of harmonics in networks and components.
CO4	Decide the devices to be implemented in power network to improve the power factor.
CO5	Comprehend and decide the devices to be used for compensation.

					√				

EMPS22E15 ELECTRIC POWER QUALITY 3 0/0 0/0 3

UNIT I OVERVIEW OF POWER QUALITY **9 hours**

Introduction-power quality-voltage quality-overview of power quality phenomena - classification of power quality issues-power quality measures and standards-THD-TIF-DIN-C message weights-flicker factor transient phenomena-occurrence of power quality problems power acceptability curves-IEEE guides, standards and recommended practices.

UNIT II HARMONICS **9 hours**

Harmonics-individual and total harmonic distortion - RMS value of a harmonic waveform- Triplex harmonics-important harmonic introducing devices-SMPS-Three phase power converters-arcing devices saturable devices-harmonic distortion of fluorescent lamps-effect of power system harmonics on power system equipment and loads.

UNIT III MODELLING OF NETWORK **9 hours**

Modeling of networks and components under non-sinusoidal - conditions transmission and distribution systems Shunt capacitors-transformers-electric machines-ground systems loads that cause power quality problems power quality problems created by drives and its impact on drive.

UNIT IV IMPROVEMENT OF POWER QUALITY **9 hours**

Power factor improvement- Passive Compensation Passive Filtering , Harmonic – Resonance Impedance Scan Analysis- Active Power Factor Corrected Single Phase Front end ,Control Methods for Single Phase APFC Three Phase APFC and Control Techniques, PFC Based on Bilateral Single Phase and Three Phase Converter.

UNIT V FACTS **9 hours**

Static VAR compensators-SVC and STATCOM Active Harmonic Filtering-Shunt Injection Filter for single phase, three-phase three-wire and three-phase fourwire systems d-q domain control of three phase shunt active filters uninterruptible power supplies constant voltage transformers series active power filtering techniques for harmonic cancellation and isolation - Dynamic Voltage Restorers for sag , swell and flicker problems - Grounding and wiring

introduction - NEC grounding requirements-reasons for grounding - typical grounding and wiring problems solutions to grounding and wiring problems.

OBJECTIVE: Students will be able to

1. Learn about restructuring of power industry.
2. Study about the economics in power system.
3. Acquire knowledge about market models of power system.
4. Gain knowledge about importance of congestion management.
5. Understand how to design an efficient transmission network and generation entity based on pricing..

COURSE OUTCOMES (COs) : The students will be able to

CO1	Restructure an efficient power system.
CO2	Acquire the knowledge of the new dimensions associated with the power system and fundamentals of microeconomics.
CO3	Differentiate the various operating mechanism between conventional and restructured power system.
CO4	Discover various power markets and market architectural aspects.
CO5	Identify issues related to Efficient pricing and usage of the transmission network and generation entity in the power market operation.

UNIT I RESTRUCTURED SYSTEM **9 hours**

Introduction to restructuring of power industry ,Reasons for restructuring of power industry, Understanding the restructuring process, Entities involved, Levels of competition, The market place mechanisms, Sector-wise major changes required; Reasons and objectives of deregulation of various power systems across the world. Developments in India -IT applications in restructured markets -Working of restructured power systems –PJM- Recent trends in Restructuring.

UNIT II FUNDAMENTALS OF ECONOMICS **9 hours**

Consumer and suppliers behavior, Total utility and marginal utility, Law of diminishing marginal utility, Elasticity of demand and supply curve, Market equilibrium, Consumer and supplier surplus, Global welfare, Deadweight loss.

UNIT III THE PHILOSOPHY OF MARKET MODELS **9 hours**

Monopoly model, Single buyer model, Wholesale competition model, Retail competition model, distinguishing features of electricity as a commodity, Four pillars of market design,Cournot, Bertrand and Stackelberg competition model.

UNIT IV TRANSMISSION CONGESTION MANAGEMENT **9 hours**

Transfer capability, Importance of congestion management, Effects of congestion, Classification of congestion management methods, ATC, TTC,TRM, CBM,ATC calculation using DC and AC model, Nodal pricing, Locational Marginal Prices (LMPs), Implications of nodal pricing, Price area congestion management Capacity alleviation methods, Redispatching, Counter-trade, Curtailment .

UNIT V PRICING OF TRANSMISSION NETWORK USAGE AND LOSS ALLOCATION **9 hours**

Introduction to transmission pricing, Principles of transmission pricing, Classification of transmission pricing, Rolled-in transmission pricing paradigm, Marginal transmission pricing paradigm, Composite pricing paradigm, Merits and

de-merits of different paradigms, Classification of loss allocation methods, Pro-rata methods, Incremental methods, Power flow tracing based allocation .

Total no. of Hours: 45

Suggested Reading:

Course Code: EMPS22E18	Course Title: POWER SYSTEM TRANSIENTS	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: Basic electrical and electronics engineering ,High voltage Engineering.	**Ty**	**3**	**0/0**	**0/0**	**3**

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Learn the reasons for occurrence of transients in a power system.
2. Understand the change in parameters like voltage and frequency during transients.
3. Acquire knowledge about the lightning phenomenon and its effect on power system.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Analyze the various transients that could occur in power system and their mathematical formulation.
CO2	Design various protective devices in power system for protecting equipment and personnel.
CO3	Derive mathematically the opening and closure timing of devices during overvoltage.
CO4	Model the power system for transient analysis.
CO5	Coordinate the insulation of various equipments in power system.

Mapping of Course Outcomes with Program Outcomes (POs)

					√				

EMPS22E18 **POWER SYSTEM TRANSIENTS** **3 0/0 0/0 3**

UNIT I ELECTRIC TRANSIENT **9 hours**

Fundamental circuit analysis of electrical transient - Laplace Transform method of solving simple Switching transients - Damping circuits -Abnormal switching transients, Three-phase circuits and transients - Computation of power system transients.

UNIT II LIGHTNING **9 hours**

Principle of digital computation – Matrix method of solution - Modal analysis- Z transform- Computation using EMTP - Lightning, switching and temporary over voltages, Lightning -Physical phenomena of lightning.

UNIT III OVERVOLTAGE **9 hours**

Interaction between lightning and power system - Influence of tower footing resistance and Earth Resistance - Switching: Short line or kilometric fault -Energizing transients - closing and - re-closing of lines -line dropping, load rejection – over voltages induced by faults.

UNIT IV TRAVELLING WAVES **9 hours**

Switching HVDC lineTravelling waves on transmission line -Circuits with distributed Parameters Wave Equation - Reflection, Refraction, Behaviour of Travelling waves at the line terminations - Lattice Diagrams – Attenuation and Distortion - Multi-conductor system.

UNIT V INSULATION COORDINATION **9 hours**

Insulation co-ordination: Principle of insulation co-ordination in Air - Insulated substation (AIS) and Gas Insulated Substation (GIS) Coordination between insulation and protection level - Statistical approach - Protective devices - Protection of system against over voltages - lightning arresters, substation earthing.

Total no. of Hours: 45

Suggested Reading:

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. To learn the active and reactive power flow control in power system.
2. To understand the need for static compensators.
3. To develop the different control strategies used for compensation.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Acquire knowledge about the fundamental principles of Passive and Active Reactive Power Compensation Schemes at Transmission and Distribution level in Power Systems.
CO2	Learn various Static VAR Compensation Schemes like Thyristor/GTO Controlled Reactive Power Systems, PWM Inverter based Reactive Power Systems and their controls.
CO3	Develop analytical modeling skills needed for modeling and analysis of such Static VAR Systems.

Mapping of Course Outcomes with Program Outcomes (POs)

					√				

EMPS22E19 FACTS AND CUSTOM POWER DEVICES 3 0/0 0/0 3

UNIT I REACTIVE POWER **9 hours**

Reactive power flow control in Power Systems - Control of dynamic power unbalances in Power System - Power flow control - Constraints of maximum transmission line loading -Benefits of FACTS Transmission line compensation - Uncompensated line -Shunt compensation, Series compensation Phase angle control Reactive power compensation Shunt and Series compensation principles - Reactive compensation at transmission and distribution level.

UNIT II COMPENSATORS **9 hours**

Static versus passive VAR compensator- Static shunt compensators: SVC and STATCOM - Operation and control of TSC, TCR and STATCOM –Compensator control -Comparison between SVC and STATCOM.

UNIT III SERIES COMPENSATION **9 hours**

Static series compensation: TSSC, SSSC -Static voltage and phase angle regulators - TCVR and TCPAR Operation and Control - Applications, Static series compensation -GCSC,TSSC, TCSC and Static synchronous series compensators and their Control.

UNIT IV UPFC **9 hours**

SSR and its damping Unified Power Flow Controller Circuit Arrangement, Operation and control of UPFC Basic Principle of P and Q control Independent real and reactive power flow control- Applications.

UNIT V FACTS **9 hours**

Introduction to interline power flow controller - Modeling and analysis of FACTS Controllers Simulation of FACTS controllers Power quality problems in distribution systems - harmonics, loads that create harmonics modeling, harmonic propagation, series and parallel resonances mitigation of harmonics passive filters, active filtering – shunt series and hybrid and their control Voltage swells , sags, flicker, unbalance and mitigation of these problems by power line conditioners IEEE standards on power quality.

Total no. of Hours: 45

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Understand the energy demand scenario.
2. Gain knowledge in modeling of load and its ease to study load demand industrially.
3. Learn about Electricity pricing models.
4. Study Reactive power management in Industries.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Comprehend and apply the concepts of load control techniques in industries.
CO2	Apply different types of industrial processes and optimize the process using various tools.
CO3	Determine load management to reduce demand of electricity during peak time
CO4	Analyze and apply different energy saving opportunities in industries

EMPS22E20 INDUSTRIAL LOAD MODELING AND CONTROL 3 0/0 0/0 3

UNIT I ENERGY SCENARIO **9 hours**

Electric Energy Scenario- Demand Side management – Industrial Load Management – Load Curves – Load Shaping Objectives – Methodologies – barriers – Classification of Industrial Loads Continuous and batch Processes – Load modeling.

UNIT II ELECTRICITY PRICING **9 hours**

Electricity Pricing – Dynamic and spot pricing – Models – Direct Load Control – Interruptible Load Control – Bottom Up approach – Scheduling – Formulation of Load models – Optimization and Control Algorithms – Case Studies.

UNIT III REACTIVE POWER MANAGEMENT **9 hours**

Reactive Power Management in Industries – Controls – Power Quality impacts – Application of Filters Energy saving in Industries.

UNIT IV COOLING AND HEATING LOADS **9 hours**

Cooling and heating loads – Load profiling – Modeling Cool Storage – Types Control Strategies – Optimal Operation-Problem Formulation – Case studies.

UNIT V CONTROL STRATEGIES **9 hours**

Captive power units - Operating and control strategies - Power Pooling- Operation models - Energy banking- Industrial Cogeneration - Selection of Schemes Optimal Operating Strategies - Peak load saving - Constraints Problem formulation- Case study - Integrated Load management for Industries.

Total no. of Hours: 45

Suggested Reading:

EMCC22I06 **PEDAGOGY STUDIES** **2 0/0 0/0 0**

UNIT I **4 hours**

Aims and rationale, Policy background, Conceptual framework and terminology Theories of learning, Curriculum, Teacher education. Conceptual framework, Research questions**.**Overview of methodology and Searching.

UNIT II **2 hours**

Thematic overview: Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries ,Curriculum, Teacher education.

UNIT III **4 hours**

Evidence on the effectiveness of pedagogical practices -Methodology for the in depth stage: quality assessment of included studies-How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy- Theory of change.Strength and nature of the body of evidence for effective pedagogical practices- Pedagogic theory and pedagogical approaches- Teachers' attitudes and beliefs and Pedagogic strategies.

UNIT IV **4 hours**

Professional development: alignment with classroom practices and followup Support -Peer support Support from the head teacher and the community- Curriculum and assessment Barriers to learning: limited resources and large class sizes.

UNIT V **2 hours**

Research design -Contexts Pedagogy- Teacher education - Curriculum and assessment - Dissemination and research impact.

Total no. of Hours: 16

Course Code: EMCC22I07	Course Title: STRESS MANAGEMENT BY YOGA	Ty/Lb/ IE	L	T/S.Lr	P/R	C
	Prerequisite: NIL	Ty	2	0/0	0/0	0

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/IE : Theory/Lab/Internal Evaluation

OBJECTIVE: Students will be able to

1. Understand the Basic Concepts of Yoga.
2. Gain knowledge on Ashtanga yoga.
3. Acquire knowledge of Techniques and Practice of Yogasanas.
4. Understand stress and the causes.
5. Attain the knowledge about stress busting through yoga.

COURSE OUTCOMES (COs) : The students will be able to

CO1	Understand the Basic Concepts of Yoga.
CO2	Gain knowledge on Ashtanga yoga.
CO3	To Understand stress and the causes.
CO4	Acquire knowledge of Techniques and Practice of Yogasanas.
CO5	Attain the knowledge about stress busting through yoga.

	Prerequisite: Core subjects	**Ty**	**2**	**0/0**	**0/0**	**0**

T/L/ : Theory/Lab L : Lecture T : Tutorial P : Practical/Project R : Research C: Credits T/L Theory/Lab

OBJECTIVE:

1. To understand the philosophy of science and ethics, research integrity and publication ethics.
2. To identify research misconduct and predatory publications.
3. To understand indexing and citation databases, open access publications, research metrics (citations, h-index, impact Factor, etc.).

COURSE OUTCOMES (COs) : By doing this course students will

CO1	Understand the ethical issues related to Research and Publication
CO2	Get to know about different types of plagiarism and ways for avoiding plagiarism
CO3	Know about best practices and guidelines in publication ethics and also learns to avoid Publication misconduct
CO4	Get to know about Violation of publication ethics, authorship and contributor ship and get to identify about Predatory publishers and journals.

CO5	Get to know about various open sources database and research metrics like indexing, citation etc.,

EMCC22I09 **RESEARCH AND PUBLICATION ETHICS** **2 0/0 0/0 0**

UNIT I: INTRODUCTION

Introduction to philosophy: Definition, nature and scope, concept, branches - Ethics: Definition, moralphilosophy, nature of moral judgments and reactions – Ethics with respect to Science and Research Intellectual honesty and research integrity.

UNIT II: SCIENTIFIC CONDUCT

Scientific misconducts: Falsification, Fabrication, and Plagiarism (FFP),Redundant Publications: Duplicate and over lapping publications, salami slicing – Selective reportingand misrepresentation of data.

UNIT III: PUBLICATION ETHICS -I

Publication ethics: Definition, introduction and importance – Best practices/standards setting initiatives and guidelines: COPE, WAME etc. Publication misconduct: definition, Concept, problems that lead to unethical behavior and vice-versa, types.

UNIT IV: PUBLICATION ETHICS - II

Violation of publication ethics, authorship and contributor ship – Identification of publication misconduct, complaints and appeals – Predatory publishers and journals – Subject specific ethical issues, Complaints and appeals: examples and fraud from India and Abroad.

UNIT V: DATA BASES AND RESEARCH METRICS

Open Access publication and Initiatives – Indexing databases – Citation databases, Web of Science, Scopus, etc. – Impact factor of journals as per Journal Citation report .SNIP, SJR, IPP, Cite Score - Metrics: h-index,gindex,i10index,altmetrics – Conflict of interest.
