Program Structure for BCA–DT (Full Time)

DECLARATION

I, **Dr. Viji Vinod** Head of **Faculty of Computer Applications**, hereby declare that this copy of the syllabus for **Bachelor of Computer Applications – Digital Technology (BCA - DT)** Full time **2025 Regulation** from page no. 1 to 216 is the final version which is being taught in the class and uploaded in our University website. I assure that the Syllabus available in our University website is verified and found correct. The Curriculum and Syllabus has been approved by our Academic Council / Vice Chancellor.

Date:

Signature

FACULTY OF COMPUTER APPLICATIONS
BCA-DIGITAL TECHNOLOGY Full Time Program- Curriculum & Syllabus
Program Structure for BCA-DT (Full Time)

Faculty of Computer Applications

VISION

To become a leading centre for computer applications, fostering an environment of constant learning and innovation.

MISSION

M1 : To create and maintain an environment for the pursuit of academic excellence with the use of computing technology.

M2 : To develop intellectual strength of students and guiding them towards technical, professional and entrepreneurship excellence.

M3 : To nurture analytical skills, inter- personal skills and build higher level of attitude, ethics and confidence.

M4 : To identify areas of cooperation with Industries and Institutions and implement them well within time-frame to mutual advantage and satisfaction.

M5 : Collaborate with industry and other agencies for academic and research programs.

QUALITY POLICY:

Imparting quality education and achieve academic excellence through planning, leadership, brilliance, inspiration and effectiveness.

PROGRAM EDUCATION OBJECTIVE: PEO

PEO 1: To demonstrate a sound knowledge in key areas of Computer Sciences and Industrial Computing

PEO 2: To demonstrate a substantial understanding of concepts in key areas of Computer Sciences

PEO 3: To carry out the required analysis and synthesis involved in Computer Systems, Information systems and Computer Applications

PEO 4: To demonstrate professional competence in developing software and in its design and implementation.

PEO 5: To develop sound Practical Skills to enable them to addressing problems which arise from Computer systems and Applications.

FACULTY OF COMPUTER APPLICATIONS

BCA-DIGITAL TECHNOLOGY Full Time Program- Curriculum & Syllabus **Program Structure for BCA-DT (Full Time)**

PROGRAM OUTCOME: POs

PO1: Disciplinary knowledge: Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate programme of study.

PO2: Communication Skills: Ability to understand and express thoughts and ideas effectively in writing and orally; and present complex information in a clear and concise manner to different groups.

PO3: Critical and Reflective thinking: Capability to apply analytic thought to analyze and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach. Critical sensibility, with self awareness and reflexivity of both self and society.

PO4: Research-related skills : Ability to recognize cause-and-effect relationships, define problems, formulate hypotheses, test hypotheses, analyze, interpret and draw conclusions from data, ability to plan, execute and report the results of an experiment or investigation.

PO5: Team work and Leadership qualities : Function effectively as an individual, and as a team member or leader in diverse teams, and in multidisciplinary environment.

PO6: Information/digital literacy: Capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate, and use a variety of relevant information sources; and use appropriate software for analysis of data and further presentation.

PO7: Multicultural competence and knowledge of heritage: Possess knowledge of the values and beliefs of multiple cultures to effectively engage globally in a multicultural society and interact respectfully with diverse groups. Ability to understand and propagate heritage values.

PO8: Moral and ethical awareness: Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Appreciating environmental and sustainability issues; and adopting objective, unbiased and truthful actions in all aspects of work.

PO9: Life long learning: Ability to update knowledge and skills, participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives.

FACULTY OF COMPUTER APPLICATIONS
BCA-DIGITAL TECHNOLOGY Full Time Program- Curriculum & Syllabus
Program Structure for BCA-DT (Full Time)

PROGRAM SPECIFIC OUTCOME: PSOs

PSO 1 : Logical and Problem Solving Skills :

Ability to analyse the software problem and design, formulate and obtain solution to the problem through learning of Mathematical fundamentals to problem solving.

PSO 2 : Project based learning : Ability to develop information and Computing skills through innovative techniques in modern IT environment to become an IT Professional or for higher studies.

PSO 3: Social Responsibility and Environment Awareness : An understanding of computational Professionalism through leadership and team building by means of environmental awareness and social responsibility.

PSO 4 : Business, Entrepreneurial and Industrial Knowledge : Ability to cultivate industrial business through learning of entrepreneurship.

Mapping PEOs with Mission

| PEOs | M1 | M2 | M3 | M4 | M5 |
|------|----|----|----|----|----|

OBJECTIVES

- To understand the concepts in sets and relations
- To understand the Basic concepts in several Mathematical functions
- To understand the Basic concepts in Counting and Recurrence relation
- To understand the Basic concepts in Graph theory
- To understand the Basic concepts in Matrix algebra

COURSE OUTCOMES (COs)

| | |
|-----|---|
| CO1 | Provide a basic understanding of fundamental mathematical concepts such as sets, functions, matrix algebra, and discrete mathematics. |
| CO2 | This course enables the students to use mathematical models and techniques to analyze and understand problems in computer science. |
| CO3 | This course demonstrates how the mathematical principles give succinct abstraction of computer science problems and help them to efficiently analyze. |
| CO4 | Able to formulate problems and solve recurrence relations. |
| CO5 | Able to model and solve real-world problems using graphs and trees. |

FACULTY OF COMPUTER APPLICATIONS

BCA-DIGITAL TECHNOLOGY Full Time Program- Curriculum & Syllabus **Program Structure for BCA-DT (Full Time)**

CBCA25C01 MATHEMATICS FOUNDATION TO COMPUTER SCIENCE – I

UNIT I: Set, Relation

9 Hours

Set, Set Operations, Properties of Set operations, Subset, Venn Diagrams, Cartesian Products, Relations on a Set, Properties of Relations, Representing Relations using matrices and digraphs.

UNIT II: Function

9 Hours

Exponential, Logarithmic and Polynomial Functions:

UNIT III: Counting and Recurrence Relation

9 Hours

Basics of counting, Pigeonhole principle, permutation, combination, Binomial coefficients, Binomial theorem, Recurrence relations, modeling recurrence relations with examples like Fibonacci numbers, the tower of Hanoi problem.

UNIT IV: Elementary Graph Theory

9 Hours

Basic terminologies of graphs, connected and disconnected graphs, subgraph, paths and cycles, complete graphs, digraphs, weighted graphs, Euler and Hamiltonian graphs.

Trees, properties of trees, concept of spanning tree. Planar graphs. Definitions and basic results on the topics mentioned.

UNIT V: Matrix Algebra

9 Hours

Types of matrices, algebra of matrices-addition, subtraction and multiplication of matrices, determinant of a matrix, symmetric and skew-symmetric matrices, orthogonal matrix, rank of a matrix, inverse of a matrix, applications of matrices to solve system of linear equations, Eigen values and Eigen vectors, Caley-Hamilton theorem.

**Total : 45
hours**

OBJECTIVES:

- To understand the fundamentals of **SQL syntax and MySQL operations** for efficient data retrieval and manipulation.
- To explore **joins, subqueries, and aggregation functions** for building complex and meaningful queries.
- To gain knowledge of **database design principles**, including normalization and relational integrity using keys and constraints.
- To automate routine tasks through **procedures, triggers**, and scheduling operations in MySQL.
- To introduce **JSON handling and NoSQL concepts** using MySQL's XDevAPI for modern application needs.

BCA-DIGITAL TECHNOLOGY Full Time Program- Curriculum & Syllabus **Program Structure for BCA-DT (Full Time)**

CBDT25S01 RELATIONAL DATABASE MANAGEMENT SYSTEM AND SQL QUERIES

UNIT 1: 9 Hours

SELECT Queries: MySQL Setup, SELECT, WHERE, AND/OR, comparison operators, String Functions, Date Functions.

Joins: Inner Join, Outer Join, Left Join, Right Join, Primary Key, Foreign Key.

Data Summarization: Aggregation Functions, Group By Clause, Having Clause, Order By Clause.

Subqueries: Scalar Query, Tabular Query, Correlated / Non-Correlated Subqueries.

DML Queries: Insert Query, Update Query, Delete Query, Index.

UNIT 2 : 12 Hours

Database Design: Entities, Attributes, Entity Relationships, Normalization (1NF, 2NF, 3NF).

DDL Commands: Create Command, Alter Command, Constraints (NOT NULL, UNIQUE, CHECK), Grant – Revoke Permissions.

Database Consistency: ACID properties, Locking Mechanisms, Temporary Tables, Views.

UNIT 3 12 Hours

Automate Database Operations: Create Procedure, Create Trigger, Schedule Operations, Repetitive Task Automation.

JSON and NoSQL: JavaScript Object Notation – JSON, JSON Data Type, JSON_OBJECT(), JSON_EXTRACT(), NoSQL Databases, XDevAPI, XDevAPI CRUD Methods.

UNIT 4 12 Hours

Project and Summative Assessment: Project Planning and Design, Solution Development, Testing and Debugging, Review and Refactoring, Project Documentation and Presentation, Summative Quiz.

Total : 45 hours

Text Books (Latest Edition):

3. **Ajay Kumar Bhalla**, *Practical DBMS & SQL*, Khanna Book Publishing Co.

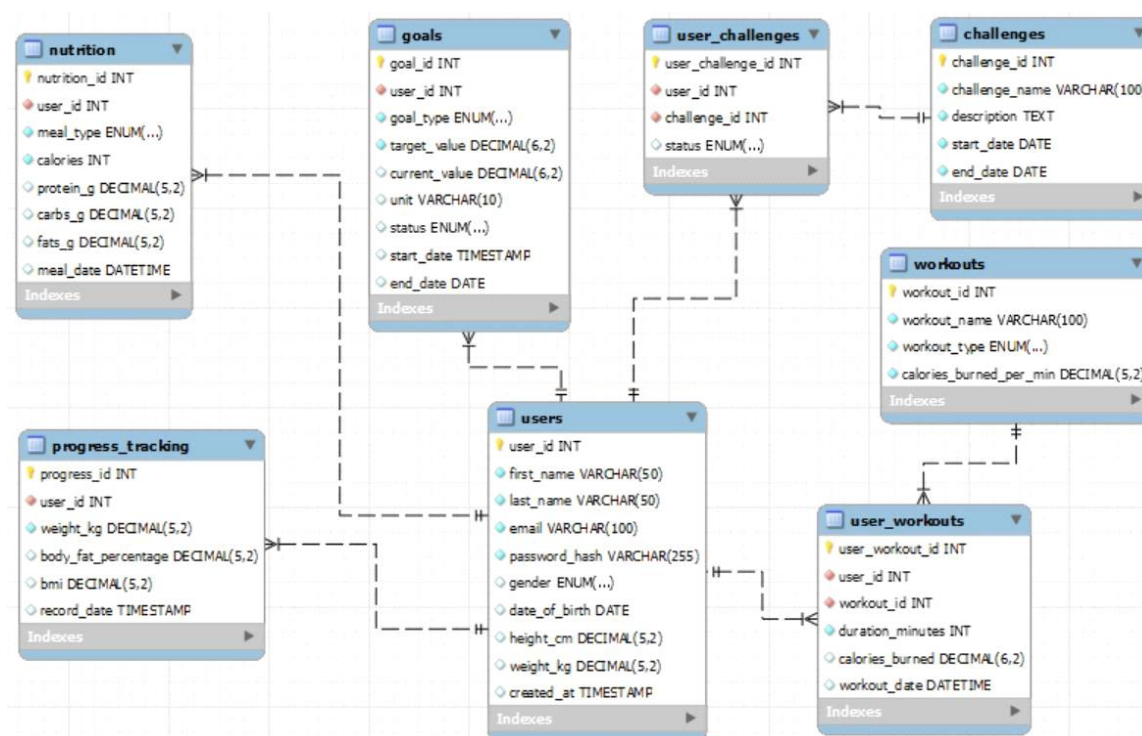

FACULTY OF COMPUTER APPLICATIONS

BCA-DIGITAL TECHNOLOGY Full Time Program- Curriculum & Syllabus Program Structure for BCA-DT (Full Time)

CBDT25S01 RELATIONAL DATABASE MANAGEMENT SYSTEM AND SQL QUERIES

List of Lab Programs:

You're a developer working on Cult Fitness Buddy, a platform that tracks workouts, meals, and progress. The system is powered by a relational database in MySQL, ensuring accurate tracking, seamless updates, and insightful reports. Below is the ER diagram representing the database structure.

Based on the above design, your task is to write queries for the following exercises:

- You need to set up MySQL and check if the Users table has any records. Write the MySQL commands to:
 - Show all databases.
 - Select the Fitness database.
 - Display all tables.
 - Retrieve all user records.
- Find users who burned over 500 calories in a single workout and retrieve their workout duration and calories burned.
- Create a leaderboard showing the first three letters of each user's name along with their registration year.
- List users along with the challenges they have joined, including those who haven't joined any challenges.
- Analyze workout trends and user performance by completing the following tasks:
 - Count total workouts logged.
 - Find the average workout duration.

FACULTY OF COMPUTER APPLICATIONS

BCA-DIGITAL TECHNOLOGY Full Time Program- Curriculum & Syllabus **Program Structure for BCA-DT (Full Time)**

- c. Identify the highest and lowest calories burned in a workout.
- d. Count unique users who have logged workouts.
- 6. Identify and fix the issue in the below-given join query:
SELECT user_id, challenge_name FROM User_Challenges UC INNER JOIN Challenges C;
- 7. Identify the top 5 users with the highest total calories burned.
- 8. Insert a new user, Ramesh Tete, into the system with his email and today's registration date.
- 9. Improve email search speed by optimizing queries for large datasets.
- 10. As a developer of Cult Fitness Buddy, you're expanding the database to include trainers, classes, and memberships for better user engagement:
 - a. Identify at least four key entities and their attributes.
 - b. Define primary keys for each entity.
 - c. Write SQL CREATE TABLE statements to implement this structure.
- 11. Enforce data integrity:
 - a. Ensure emails are unique.
 - b. Make phone numbers mandatory.
 - c. Prevent negative membership durations.
- 12. Manage user roles and permissions:
 - a. Grant trainers access to only class data.
 - b. Allow admins full database access.
- 13. Optimize leaderboard queries by creating a view to retrieve the top 5 users with the highest total calories burned.
- 14. Add a JSON column to store user preferences for diet and workout.
- 15. Write a query to retrieve the diet preference from the stored JSON data.

|------------------|---|----------|----------|----------|----------|-----------------|
| CBDT25S02 | Object Oriented Programming in Java | L | T | P | C | TY/Lb/IE |
| | Prerequisite: Digital tools, database essentials, Basic problem-solving and time commitment | 3 | 0 | 4 | 5 | ETL |
| | | | | | | |
| | Course Designed by – Faculty of Computer Applications | | | | | |

OBJECTIVES:

- To introduce the basics of **Java programming**, including variables, data types, operators, input methods, and control structures.
- To develop problem-solving skills using **modular programming techniques**, such as methods, exception handling, and recursion.
- To explore **string manipulation**, array operations, and common algorithms like sorting and searching.
- To understand core **Object-Oriented Programming (OOP)** concepts such as classes, objects, inheritance, polymorphism, and interfaces.
- To apply theoretical knowledge in a **hands-on Java project**, focusing on design, development, debugging, and documentation.

COURSE OUTCOMES (COs)

| | |
|--|--|
| CO1 | Learn the basics of Java programming, including variables, datatypes, loops, arrays, and decision-making structures. |
| CO2 | Develop problem-solving skills by creating functions, manipulating strings, and applying recursion to solve complex problems. |
| CO3 | Dive into sorting, searching algorithms, and access modifiers to handle large datasets efficiently and secure your data. |
| CO4 | Gain a solid understanding of OOP concepts like classes, objects, inheritance, and polymorphism to write clean, reusable, and maintainable code. |
| CO5 | Design Robust Applications: Learn to design scalable Java applications using abstract classes, interfaces, and other advanced OOP principles for real-world problem-solving. |
| Mapping of Course Outcomes with Program outcomes (Pos) | |
| (1/2/3 indicates strength of correlation) 3-HIGH, 2-Medium, 1-Low | |

CBDT25S02

OBJECT ORIENTED PROGRAMMING IN JAVA

UNIT-1

9 Hours

Introduction to Java: Program Structure, println() Method, Variables, Datatypes, Operators, Scanner class
 Control Structures: Relational Operators, Logical Operators, Ternary Operator, if Statement, if...else Statement, if...else if Statement, switch case, for Loop, while Loop, do...while Loop
 Arrays: 1-Dimensional Arrays, 2-Dimensional Arrays, Array Operations, Debug Errors

UNIT-2

12 Hours

Modular Programming: Function Definition, Arguments, Parameters, Return Value, Exception Handling, try...catch Block, finally, throw and throws
 Strings: String, String Buffer, String Builder, String Operations
 Sorting Searching: Sorting, Bubble Sort, Searching, Linear Search, Recursion

UNIT-3

12 Hours

Introduction to Object Oriented Programming: Class, Object, Constructor, Default Constructor, Parameterized Constructor, this Keyword, Access Specifiers – private, public, protected, static, final
 Inheritance and Polymorphism: Inheritance Types, super Keyword, Polymorphism, Overloading, Overriding, Static Binding, Dynamic Binding
 Abstract Classes and Interfaces: Abstract Class, Abstract Methods, Interface

UNIT-4

12 Hours

Project and Summative Assessment: Project Planning and Design, Solution Development, Testing and Debugging, Review and Refactoring, Project Documentation and Presentation, Summative Quiz

Total : 45 hours

CBDT25S02

OBJECT ORIENTED PROGRAMMING IN JAVA

List of Lab Programs

1. Write a Java program that takes your name, age and favorite color as input and prints a greeting message.
2. Create a simple calculator that accepts two numbers and an operator (+, -, *, /) and performs the operation. Handle any invalid input provided the user.
3. Write a program that accepts and swaps two numbers without using a third variable.
4. Develop a menu-driven program that lets users choose between different mathematical operations using a switch statement.
5. Write a Java program to print the Fibonacci series up to n terms using a loop. Also do the same with the help of recursive function.
6. Create a function that calculates the factorial of a number.
7. Implement a function that checks whether a given number is prime.
8. Write a program that takes n numbers as input, stores them in an array, and prints the largest and smallest numbers.
9. Implement a program that reverses the elements of a one-dimensional array.
10. Write a program that checks if a given string is a palindrome (same forward and backward).
11. Implement a program that reverses a string using StringBuilder or StringBuffer.
12. Write a recursive function to find the sum of digits of a given number.
13. Write a program that takes two numbers as input and handles division by zero using try- catch- finally.
14. Create a custom exception called InvalidAgeException that gets thrown if a user enters an age below 18 for registration.
15. Develop a Banking System with a base class for bank accounts, using static variables for shared attributes. Extend it to modify withdrawal behaviour via method overriding, enforce a minimum balance, and use the final keyword to restrict modifications while ensuring encapsulation.

GENERAL ENGLISH – I

Unit I: Vocabulary Building

6 Hours

The concept of Word formation, Root words from foreign languages and their use in English, Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives, Synonyms, antonyms, and standard abbreviations.

Unit II: Basic Writing Skills

6 Hours

Sentence structures, Use of phrases and clauses in sentences, Importance of proper punctuation, Creating coherence, Organizing principles of paragraphs in documents, Techniques for writing precisely, Formal and Informal letters.

Unit III: Identifying Common Errors in Writing

6 Hours

Subject-Verb agreement, Noun-Pronoun agreement, Misplaced modifiers, Articles, Prepositions, Redundancies.

Unit-IV: Nature and Style of sensible Writing

6 Hours

Describing, Defining, Classifying, providing examples or evidence, writing introduction and conclusion, Module V: Writing Practices, Comprehension, Précis Writing, Essay Writing

Unit-V: Oral Communication

6 Hours

(This Module involves interactive practice sessions in Language Lab)

Listening Comprehension, Pronunciation, Intonation, Stress and Rhythm, Common Everyday Situations: Conversations and Dialogues, Communication at Workplace, Interviews, Formal Presentations

Total : 30 hours

FACULTY OF COMPUTER APPLICATIONS
BCA-Full Time Program- Curriculum & Syllabus
Program Structure for BCA-DT (Full Time)

CBCA25VA1 ENVIRONMENTAL SCIENCE AND SUSTAINABILITY

UNIT-I Understanding Environment, Natural Resources, and Sustainability 6 Hours

Fundamental environmental concepts and their relevance to business operations; Components and segments of the environment, the man-environment relationship, and historical environmental movements.

UNIT-II Natural Resources, and Sustainability 6 Hours

Concept of sustainability; Classification of natural resources, issues related to their overutilization, and strategies for their conservation. Sustainable practices in managing resources, including deforestation, water conservation, energy security, and food security issues. The conservation and equitable use of resources, considering both inter-generational and inter-generational equity, and the importance of public awareness and education.

UNIT-III: Ecosystems, Biodiversity, and Sustainable Practices 6 Hours

Various natural co-systems, learning about their structure, functions, and ecological characteristics. The importance of biodiversity, the threats it faces, and the methods used for its conservation. Ecosystem resilience, homeostasis, and carrying capacity, emphasizing the need for sustainable ecosystem management. Strategies for in-situ and ex-situ conservation, nature serves, and the significance of India a mega diverse nation.

UNIT- IV Environmental Pollution, Waste Management, and Sustainable Development 6 Hours

Various types of environmental pollution, including air, water, noise, soil, and marine pollution, and their impacts on businesses and communities. Causes of pollution, such as global climate change, ozone layer depletion, the green house effect, and acid rain with a particular focus on pollution episode in India. Importance of adopting cleaner technologies; Solid waste management; Natural and man-made disasters, their management, and the role of businesses in mitigating disaster impacts.

UNIT-V Social Issues, Legislation, and Practical Applications 6 Hours

Dynamic interactions between society and the environment, with focus on sustainable development and environmental ethics. Role of businesses in achieving sustainable development goals and promoting responsible consumption. Overview of key environmental legislation and the judiciary's role in environmental protection, including the Water (Prevention and Control of Pollution) Act of 1974, the Environment (Protection) Act of 1986, and the Air (Prevention and Control of Pollution) Act of 1981. Environmental justice, environmental refugees, and their settlement and rehabilitation of affected populations; Ecological economics, human population growth, and demographic changes in India.

CBCA25C02 MATHEMATICS FOUNDATION TO COMPUTER SCIENCE – II

UNIT I: **9 hours**

Logic and Methods of Proofs:

Propositions, logical operations (basic connectives), compound statements, construction of truth table, quantifiers, conditional statements, tautology, contradiction, contingency, logical equivalence. Conjunctive Normal Forms (CNF) and Disjunctive Normal Forms (DNF), Mathematical Induction.

UNIT II: **9 hours**

Algebraic Structures:

Semi-group, Monoid, Group, Subgroup. (Definition and Simple problems only)

Unit III: **9 hours**

Numerical Methods:

Concept and importance of errors in numerical methods. Solution of algebraic and transcendental equations. Bisection method and Newton-Raphson methods. Numerical Interpolation : Newton's Forward and Newton's Backward interpolation formula and Lagrange's formula.

UNIT IV: **9 hours**

Optimization Techniques:

Linear programming: Introduction, LP formulation, Graphical method for solving LPs with two variables, Simplex Method.

UNIT V: **9 hours**

Transportation problem: Definition, Linear form, North-west corner method, Least cost method, Vogel's approximation method for finding feasible solution, MODI method for finding optimum solution.

| | | | | | | |
|------------------|--|----------|----------|----------|----------|-----------------|
| CBDT25C01 | Data Structures and Algorithms | L | T | P | C | TY/Lb/IE |
| | | 3 | 0 | 4 | 5 | ETL |
| | Prerequisite: Programming in Java, Object-Oriented Concepts | | | | | |
| | Course Designed by – Faculty of Computer Applications | | | | | |

OBJECTIVES

- Implement and manipulate arrays, linked lists, stacks, queues, trees, and graphs.
- Analyze time and space complexity (Big O notation) for data operations.
- Choose the most appropriate data structure for a given application scenario.
- Demonstrate the use of recursion in tree and graph traversal.

COURSE OUTCOMES (COs)

| | |
|-----|--|
| CO1 | Understand the fundamental concepts of Data Structures and their applications. |
| CO2 | Develop problem-solving skills using Data Structures. |
| CO3 | Implement Data Structures using C programming language. |
| CO4 | Implement various data structures using a programming language |
| CO5 | Design and develop algorithms using appropriate data structures for real-world problem solving. |

FACULTY OF COMPUTER APPLICATIONS
BCA-Full Time Program- Curriculum & Syllabus
Program Structure for BCA-DT (Full Time)

CBDT25C01

DATA STRUCTURES AND ALGORITHMS

UNIT-1

9 hours

Searching and Sorting Fundamentals: Linear Search, Binary Search, Interpolation Search, Bubble Sort, Selection Sort, Insertion Sort, Comparison of Sorting and Searching Algorithms, Real-world Applications, Algorithm Efficiency: Big O, Big Theta, Big Omega, Basics of Recursion

UNIT-2

12 hours

Advanced Algorithms and Linear Data Structures: Merge Sort, Quick Sort, Heap Sort, Stack Operations (Push, Pop, Peek), Queue Operations (Enqueue, Dequeue), Circular Queue, Deque, Priority Queue, Linked Lists (Singly, Doubly, Circular), Recursive Linked List Operations, Hashing Techniques, Collision Handling, Load Factor, Rehashing

UNIT-3

12 hours

Non-Linear Data Structures and Optimization Techniques: Tree Terminology, Binary Tree Traversals (Inorder, Preorder, Postorder), BST Operations using Recursion, Graph Concepts, Graph Representation (Adjacency Matrix & List), BFS, DFS, Shortest Path Algorithms (Dijkstra's, Bellman-Ford, A*), Greedy Algorithms (Activity Selection, Huffman Coding), Dynamic Programming (Memoization, Tabulation, Fibonacci)

UNIT-4

12 hours

Project and Summative Assessment: Choose a problem statement, Implement searching and sorting algorithms, Utilize stacks, queues, linked lists, trees, and graphs, Apply recursion and dynamic programming techniques, Analyse and optimize performance, Present the solution and provide a code walkthrough. Summative Quiz.

Total : 45 hours

CBDT25C01

DATA STRUCTURES AND ALGORITHMS LAB

List of Lab Programs

1. Write a program to implement Linear Search and Binary Search algorithms on both sorted and unsorted arrays.
2. Create a program that compares the performance of different sorting algorithms (Bubble Sort, Selection Sort, and Insertion Sort) on various input sizes.
3. Implement a function to perform Binary Search on a sorted array and analyse its time complexity.
4. Write a program to implement Merge Sort and Quick Sort algorithms and compare their efficiency in terms of time complexity.
5. Implement a Stack using arrays. Perform basic stack operations: Push, Pop, and Peek.
6. Create a Queue using arrays and implement the basic operations: Enqueue and Dequeue.
7. Design a program that implements a Circular Queue and demonstrate its application in round-robin scheduling.
8. Implement a Priority Queue using arrays and apply it to simulate scheduling tasks based on priority.
9. Create a program to implement a Singly Linked List with basic operations such as Insertion, Deletion, and Traversal.
10. Design and implement a Doubly Linked List, and perform operations like insertion and deletion at both ends.
11. Write a recursive function to reverse a Linked List.
12. Implement a program to demonstrate Hashing using open addressing and chaining for collision resolution.
13. Create a program to build and traverse a Binary Tree (Inorder, Preorder, Postorder traversal).
14. Write a program to implement a Binary Search Tree (BST), with operations like insertion, search, and deletion.
15. Develop a program that demonstrates the BFS (Breadth-First Search) and DFS (Depth-First Search) algorithms on a graph.
16. Implement Dijkstra's Algorithm to find the shortest path in a weighted graph.
17. Design a solution to the Activity Selection Problem using Greedy Algorithms.
18. Implement the Huffman Coding algorithm for data compression.
19. Write a dynamic programming solution to the Fibonacci Sequence using both recursive and tabulation methods.
20. Design and implement a program to solve the Knapsack Problem using Dynamic Programming.

OPERATING SYSTEM

UNIT I

6 hours

Operating Systems Overview: Introduction, Evaluation of OS, Components & services of OS, Structure, Architecture, Types of OS, Batch systems, Concepts of Multiprogramming and Time Sharing, Parallel, Distributed and real time systems.

Operating Systems Structures: Operating system services and systems calls, system programs, operating system structure, operating systems generations.

UNIT II

6 hours

Process Management: Process concepts, Process states, Process State Transitions, Process Scheduling, Process Control Block, Threads, Concepts of Multithreads, Benefits of Threads, Types of Threads

Process Scheduling: Definition, Scheduling objectives, Scheduling algorithms, CPU Scheduling, Preemptive and Non- Preemptive Scheduling algorithms (FCFS, SJF and RR), Performance evaluation of the Scheduling algorithms

UNIT III

6 hours

Process Synchronization: Introduction, Inter-Process Communication, Race Conditions, Critical Section Problem, Mutual Exclusion, Semaphores, Monitors

Deadlocks: System Model, Deadlock Characterization, Deadlock Prevention, Detection And Avoidance, Banker's Algorithm, Recovery From Deadlocks.

UNIT IV

6 hours

Memory Management: Logical and Physical address map, Swapping, memory allocation, MFT, MVT, Internal and External fragmentation and Compaction, Paging, Segmentation.

Virtual Memory: Demand Paging, Page Replacement Algorithms, Allocation of Frames, Thrashing

I/O Management: Principles of I/O hardware: Disk structure, Disk Scheduling Algorithms

UNIT V

6 hours

File System: Concept of A File, Access Methods, Directory Structure, File System Mounting, File Sharing, Protection. File System Implementation: File System Structure, File System Implementation, Directory Implementation, Allocation Methods, Free-Space Management, Efficiency and Performance, Comparison of UNIX and Windows.

Total : 30 hours

CBDT25S03 ADVANCED CODING IN JAVA

UNIT-1

9 hours

Exception Handling: Types of Exceptions, Checked vs Unchecked Exceptions, try...catchBlock, finallyBlock, throwKeyword, throwsClause

User-Defined Exceptions: Creating Custom Exception Classes, Throwing User-Defined Exceptions, Handling User-Defined Exceptions

Error Handling Best Practices: Exception Propagation, Stack Trace Analysis, Defensive Coding

UNIT-2

12 hours

Java Collections Framework: Introduction to Collections, Collection Interfaces – List, Set, Map, Collection Hierarchy

Ordered Collections: ArrayList, LinkedList, Vector, Stack– Methods and Use Cases

Unordered Collections: HashSet, LinkedHashSet– Characteristics and Operations

UNIT-3

12 hours

Generics in Java: Generic Classes, Generic Methods, Bounded Types, Wildcards

Lambda Expressions: Syntax and Usage, Functional Interfaces, Lambda with Collections

Functional Programming Concepts: Predicate, Consumer, Function Interfaces, Stream API Basics

UNIT-4

12 hours

Project and Summative Assessment: Application of Exception Handling and Collections, Use of Lambda Expressions in Project Logic, Testing and Debugging, Solution Optimization, Final Presentation and Documentation, Summative Quiz

Total : 45 hours

ADVANCED CODING IN JAVA

List of Lab Programs

1. Write a Java program that divides two numbers entered by the user and handles ArithmeticException when division by zero occurs.
2. Create a program that simulates an ATM withdrawal. Throw a custom InsufficientFundsException if the user tries to withdraw more than the balance.
3. Develop a program that reads an array of integers from the user and stores them in an ArrayList. Display all even numbers using a lambda expression.
4. Implement a student directory using a HashMap where roll number is the key and student name is the value. Include options to add, remove, and search.
5. Create a LinkedHashSet to store a list of unique cities entered by the user and print them in the order they were entered.
6. Design a program using TreeMap to store product names and their prices. Display all entries in ascending order of product names.
7. Write a generic method that accepts an array of any type and prints all its elements.
8. Create a generic class Box<T> with methods to set and get the value. Instantiate it with different data types.
9. Implement a lambda expression that takes a list of strings and prints only those strings that start with the letter 'A'.
10. Write a program using HashSet to remove duplicate elements from an array of integers.
11. Develop a phonebook application using a Map to store names and phone numbers. Include a search function using the name as a key.
12. Create a program that throws a user-defined exception InvalidAgeException if the user enters an age less than 0 or greater than 150.
13. Write a Java program to demonstrate the use of Comparator and Comparable to sort a list of student objects by name and marks.
14. Use lambda expressions and forEach to print all elements of a List<String> in uppercase.
15. Build a simple inventory management system using ArrayList to store items and their quantities. Allow adding, updating, and removing items.
16. Create a program that uses Optional to avoid NullPointerException when accessing object properties.
17. Write a Java program to group a list of strings by their first character using Map and lambda expressions.
18. Implement a program that filters and prints numbers greater than 50 from a List<Integer> using the Stream API.
19. Design a mini-address book where each entry is a Person object (with name, email, and phone), stored in a HashMap. Perform CRUD operations.
20. Develop a Java application that logs different types of exceptions to a file for debugging using try-catch and FileWriter.

INDIAN CONSTITUTION

UNIT-I An Economic History of the Constitution of India **6 Hours**
 Historical understanding of the constitution as an economic document. Understanding the Preamble, Starting from the land reform cases in the 1950s to the validity of the bitcoin ban imposed by the RBI, this module signpost all of the important economic moments in the constitutional history of post-colonial India; Constitutional design, Legal Regulation and economic justice.

UNIT-II Fundamental Rights and Business in India **6 Hours**
 Article 19 (1) (g), grants every citizen the right, to practice any profession, or to carry on any profession, occupation, trade, or business. Like other fundamental rights, this right is subject to reasonable restrictions imposed by the state. This particular provision of the Constitution has been one of the most severely litigated freedoms. Fundamental Duties.

UNIT-III Fiscal Federalism **6 Hours**
 Article articles 301 to 307 of the Constitution pertains to Trade, Commerce and Inter course within the Territory of India; Challenges associated with fiscal federalism in India including the vertical fiscal imbalance; Article 280 of the Constitution.

UNIT-IV Constitutional battles **6 Hours**
 This module will be taught through key case studies that demonstrate the complex and fascinating overlap between the constitution and business and shall use Saurabh Kirpal's book Fifteen Judgments.

UNIT-V Constitutional and economy **6 Hours**
 Cases that Shaped India's Financial Landscape as our guide through this landscape. The case studies include the banning of diesel engine cars, Telecom regulation and ownership of broadcast media, Demonetization, Aadhaar, the lifting of restrictions on dealing in Crypto currencies.

TOTAL: 30 HOURS

OBJECT ORIENTED MODELING AND DESIGN

UNIT I

9 Hours

Introduction OOSD Methodology - Unified approach - Object basics - Object state and properties - Behavior Methods - Messages - Information hiding - Class hierarchy - Relationships – Associations - Aggregations- Identity - Dynamic binding - Persistence - Meta classes - Object oriented system development life cycle - S/W device process- High quality Software Object Oriented System Development- Reusability.

UNIT II

9 Hours

Methodology and UML Introduction – Survey – Rumbugh- Booch- Jacobson methods – Patterns – Frameworks - Unified approach – Unified modeling language - Static and Dynamic models - UML diagrams - Class diagram - Use case diagrams -Dynamic modeling diagrams - Interaction Diagrams- sequence diagrams.

UNIT III

9 Hours

Object Oriented Analysis Identifying Usecase - Business object analysis - Usecase driven object oriented analysis- Usecase model – Documentation - Introduction- classification theory- Approaches for Identifying classes - Identifying object- relationships- attributes- methods - Super-sub class-Aggregation Class Responsibility - Object responsibility.

UNIT IV

9 Hours

Object Oriented Design -Design process – Axioms - Corollaries - Designing classes - Class visibility - Refining attributes - Methods and protocols - Object storage and object interoperability – DBMS - Object relational systems - Designing interface objects - Macro and Micro level processes - The purpose of a view layer interface

UNIT V

9 Hours

Software Quality assurance - Testing strategies - Object orientation testing - Test cases - Test Plan - Debugging principles -Usability - Satisfaction-Usability testing-Satisfaction testing - Software Reviews and Inspections - Test Metrics and Measurements.

Total : 45 hours

| | | | | | | |
|------------------|---|----------|----------|----------|----------|-----------------|
| CBDT25C02 | Building Interactive Webpage using modern Javascript | L | T | P | C | TY/Lb/IE |
| | Prerequisite: Basic problem-solving techniques, Programming, database, and time commitment | 3 | 0 | 4 | 5 | ETL |
| | | | | | | |
| | Course Designed by – Faculty of Computer Applications | | | | | |

OBJECTIVES:

- Understand HTML5 structure, semantic elements, and responsive design using CSS and Bootstrap.
- Learn JavaScript fundamentals including variables, control flow, functions, and unit testing.
- Work with arrays, objects, JSON, and REST APIs for dynamic web applications.
- Manipulate the DOM and handle events for interactive user experiences.
- Apply skills in a hands-on project involving design, development, testing, and presentation.

COURSE OUTCOMES (COs)

| | | | | | | | | | | | | | | | |
|-----|---|--|-----|-----|-----|-----|-----|-----|-----------------------------|-----|------|------|------|------|--|
| CO1 | Build websites that automatically adjust to different screen sizes, ensuring optimal user experience across all devices. | | | | | | | | | | | | | | |
| CO2 | Use the latest HTML and CSS standards to structure and style your web pages, creating rich, accessible, and visually appealing designs. | | | | | | | | | | | | | | |
| CO3 | Leverage the power of the Bootstrap framework to accelerate the development of responsive and consistent layouts. | | | | | | | | | | | | | | |
| CO4 | Add interactive features to your pages using modern JavaScript (ES6), making your web applications engaging and dynamic. | | | | | | | | | | | | | | |
| CO5 | Apply skills in a hands-on project involving design, development, testing, and presentation. | | | | | | | | | | | | | | |

FACULTY OF COMPUTER APPLICATIONS
BCA-Full Time Program- Curriculum & Syllabus
Program Structure for BCA-DT (Full Time)

CBDT25C02 BUILDING INTERACTIVE WEBPAGE USING MODERN JAVASCRIPT

UNIT-1

9 HOURS

Webpage: HTML Document Anatomy, Markup Language, Tags, Paired Tags, Unpaired Tags, HTML5 Elements – Heading, Paragraph, Image, Anchor, List, Live Server Deployment, Emmet Toolkit.

Semantic Design: Semantic Elements, Header, Nav, Article, Footer, Section, Table, ARIA Labels.

Styling: Cascading Style Sheets, CSS Selectors, CSS Properties, Page Layouts, CSS Box Model, Block Element, Inline Element, Position Properties, Z-Index, Flexbox Model.

Responsive Webpage Design: Responsive Design Patterns, CSS Flexbox, CSS Grid, CSS Media Query, Bootstrap Framework, Bootstrap Grid System, Bootstrap Components, Bootstrap Utilities

UNIT-2

12 HOURS

Introduction to JavaScript: Variables, Constants, Declarations, Hoisting, Primitive Datatypes, Literals, Template Literals, Operators, typeof operator

Control Structures: Conditional Constructs, if statement, if...else statement, if...else if statement, Nested if, switch case, Loop Constructs, for loop, while loop, do...while loop. **Modular**

Programming: Function Definition, Function Call, Arguments, Parameters, Return Values, Variable Scope, Default Parameters, In-built Functions

Unit Testing: Unit Testing, Mocha, Chai, describe() Function, it() Function, Mocha Hooks.

UNIT-3

12 HOURS

Arrays and Objects: Data modelling, Object, Property, Methods, Array Structure, Array Length, Indexing, for...of Loop, Array Destructuring, Spread Operator, Array Methods, Arrow Function,

JSON and REST APIs: JavaScript Object Notation – JSON, Conversions, Client-Server Architecture, Representational State Transfer – REST, HTTP, Request, Response, HTTP Methods, Status Codes **DOM:** Document Object Model - Elements, Properties and Methods, Events, Form Validation **JavaScript Promise Object:** Synchronous, Asynchronous, Callbacks, Promise Object, Axios API

UNIT-4

12 HOURS

Project and Summative Assessment: Project Planning and Design, Solution Development, Testing and Debugging, Review and Refactoring, Project Documentation and Presentation, Summative Quiz

Total : 45 hours

BUILDING INTERACTIVE WEBPAGE USING MODERN JAVASCRIPT

List of Lab Programs

1. Create a webpage using HTML5 semantic elements to showcase two historical landmarks of your country, including a header, main content section with images, and a footer.
2. Design a responsive webpage layout using CSS Flexbox and CSS Grid that adapts to different screen sizes for a personal portfolio website.
3. Style a navigation bar using CSS properties and selectors to include a brand logo, menu items, and a call-to-action button.
4. Use the Bootstrap framework to create a three-column pricing table with different subscription plans, ensuring responsiveness.
5. Implement a webpage with a fixed header and footer while allowing the main content to scroll, demonstrating the use of CSS position properties and the Z-index.
6. Write a program to accept user's first name, last name, and age, then print a greeting message with these inputs.
7. Create a simple calculator which log the results along with their data types using the typeof operator.
8. Write a program that takes a student's marks (out of 100) as input and assign a grade based on the following criteria:
 - a. 90+ → A
 - b. 80-89 → B
 - c. 70-79 → C
 - d. 60-69 → D
 - e. Below 60 → F
9. Create a program that takes a traffic light color (red, yellow, green) as input and prints the corresponding action:
 - a. Red → "Stop"
 - b. Yellow → "Get Ready"
 - c. Green → "Go"
10. Write a program that takes an integer input and prints its reverse using a while loop. Example:
Input = 1234, Output = 4321
11. Ask the user for a number (N) and print its multiplication table up to 10.
12. Write a program that calculates the sum of digits of a given number Example:
Input = 678, Output = 6 + 7 + 8 = 21
13. Create a function that takes a number as input and returns its factorial.
14. Write a function that checks if a given number is prime or not.
15. Write unit tests using Mocha and Chai to verify if a given function correctly returns the square of a number.
16. Create an array of student objects with properties like name, age, and marks, and filter students who scored above 80.
17. Create an array of employee objects with properties like name, designation, salary, and experience, then filter employees with more than 5 years of experience. Increase the salary of employees with less than 3 years of experience by 10% using array methods.
18. Convert a JavaScript object containing product details into JSON format and parse it back into an object.
19. Fetch data from a public REST API and display specific details like name, price, and availability on a webpage.

FACULTY OF COMPUTER APPLICATIONS
BCA-Full Time Program- Curriculum & Syllabus
Program Structure for BCA-DT (Full Time)

20. Create a shopping cart system where users can add, remove, and view cart items dynamically using DOM manipulation.
21. Implement form validation for a login form, ensuring the username is at least 5 characters long. Validate a password field to require at least one uppercase letter, one number, and a minimum of 8 characters. Display error messages dynamically if form validation fails, preventing submission.
22. Create a JavaScript program that fetches weather data asynchronously using the Axios API and displays temperature and conditions.
23. Create a JS program to fetch posts from <https://jsonplaceholder.typicode.com/posts> and display the title and body of the first 5 posts. Handle failed responses gracefully.

| CBDT25C03 | Building Single Page Applications using React | L | T | P | C | TY/Lb/IE |
| | Prerequisite: Design responsive and interactive webpages using HTML5, CSS3, Bootstrap, Modern JavaScript. | 2 | 0 | 4 | 4 | ETL |
| | | | | | | |
| | Course Designed by – Faculty of Computer Applications | | | | | |

OBJECTIVES:

- Understand React fundamentals, component structure, and JSX rendering.
- Manage component state and handle events effectively using hooks like useState and useEffect.
- Apply styling techniques including CSS Modules and Material Design in React.
- Implement form handling, validation, and dynamic inputs using react-hook-form.
- Build a complete React project with routing, testing, debugging, and documentation.

COURSE OUTCOMES (COs)

| | | | | | | | | | | | | | | |
|-----|---|-----|-----|-----|-----|-----|-----|-----------------------------|-----|-----|------|------|------|------|
| CO1 | Get started with React fundamentals, including components, JSX, the virtual DOM, and declarative rendering techniques to build dynamic SPAs. | | | | | | | | | | | | | |
| CO2 | Manage component state using React Hooks and fetch data from remote servers for dynamic application behaviour. | | | | | | | | | | | | | |
| CO3 | Implement unit testing with Jest and React Testing Library to ensure application reliability. | | | | | | | | | | | | | |
| CO4 | Style React components using modern CSS techniques and Material Design for responsive, user-friendly interfaces. | | | | | | | | | | | | | |
| CO5 | Handle user interactions with forms, create flexible forms using react-hook-form, and implement navigation with React Router for multi-page apps. | | | | | | | | | | | | | |
| | Mapping of Course Outcomes with Program outcomes (Pos) | | | | | | | | | | | | | |

CBDT25C03 BUILDING SINGLE PAGE APPLICATIONS USING REACT

List of Lab Programs

1. Create a React component that displays a personalized welcome message using JSX and updates dynamically based on user input.
2. Develop a simple SPA layout using React components for a header, main content, and footer.
3. Build a Card component that receives title, description, and image as props and renders them dynamically.
4. Implement a navigation bar component with static links and explain the advantage of using reusable components in SPAs.
5. Create a button component that accepts a label as a prop and displays an alert with a custom message when clicked.
6. Create a React component that uses useState to toggle between light and dark mode when a button is clicked.
7. Build a counter component that increments or decrements a number when buttons are clicked, ensuring the state updates correctly.
8. Fetch and display a list of users from a remote API using useEffect, showing their names and emails in a list.
9. Write a simple unit test using Jest and React Testing Library to check if a button click updates the displayed count.
10. Lift state up by creating a parent component that tracks a selected item and updates child components when the selection changes.
11. Style a React component using CSS Modules and dynamically apply different styles based on a state value.
12. Implement a to-do list using controlled components, where users can add, edit, and delete tasks using form inputs.
13. Create a form using react-hook-form that validates user input, ensuring the email and password fields meet specific criteria.
14. Use useRef to manage focus on an input field when a button is clicked in a form component.
15. Build a React Router setup with at least three pages (Home, About, Contact) and navigation links between them.
16. Fetch product details from an API and display them in a styled card layout using Material UI components.
17. Design a responsive navigation bar using Material UI components and ensure it adapts to different screen sizes.
18. Implement a login form using Material UI, applying proper form validation and displaying error messages when input criteria are not met.

SOFTWARE ENGINEERING

UNIT I

9 Hours

Introduction: The evolving role of software, changing nature of software, layered technology, a process framework, Process models' The waterfall model, incremental process models, evolutionary process models, the unified process.

Agile software development: Agility Principles, Agile methods, Plan-driven and agile development, Extreme programming, Scrum, A Tool Set for the Agile Process.

UNIT II

9 Hours

Software Requirements Engineering: Functional and non-functional requirements, the software requirements document, Requirements specification, Requirements engineering processes, Requirements elicitation and analysis, Requirements validation, Requirements management .

Risk management: Reactive Vs proactive risk strategies, software risks, risk identification, risk projection, risk refinement, RMMM, RMMM plan.

UNIT III

9 Hours

Project Planning: Software pricing, Plan-driven development, Project scheduling. Agile planning, estimation techniques.

Design: Design process and design quality, design concepts, the design model, software architecture, data design, architectural design, Basic structural modeling, class diagrams, sequence diagrams, Collaboration diagrams, use case diagrams, component diagrams.

UNIT IV

9 Hours

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, black-box and white-box testing, validation testing, system testing, the art of debugging.

Product metrics: Software quality, metrics for analysis model, metrics for design model, metrics for source code, metrics for testing, metrics for maintenance.

UNIT V

9 Hours

Quality Management: Quality concepts, software quality assurance, software reviews, formal technical reviews, statistical software quality assurance, software reliability. **Release Management:** Release planning, development and build plans, release strategies, risk management, and post-deployment monitoring.

Product sustenance: Maintenance, updates, End of life, migration strategies.

|---|-------------|---|-----|-----|-----|-----------------------------|-----|-----|-----|-----|------|------|------|------|-----|--|----|--|
| 1. To enrich the students towards the knowledge of entrepreneurial skills and to make the students understand the approaches to attain the goals of the business. | | | | | | | | | | | | | | | | | | |
| 2. To recognize the value of problem solving, effective business management and entrepreneurial thinking to business development. | | | | | | | | | | | | | | | | | | |
| 3. To identify the key factors and be able to apply the key entrepreneurial process – command and control, calculated risk-taking and opportunity recognition to business development | | | | | | | | | | | | | | | | | | |
| COURSE OUTCOMES (Cos)Students completing this course Will be able to | | | | | | | | | | | | | | | | | | |
| CO1 | | Provide information related to entrepreneurship | | | | | | | | | | | | | | | | |
| CO2 | | Make students state the importance of entrepreneurial development | | | | | | | | | | | | | | | | |
| CO3 | | State the importance of business idea generations | | | | | | | | | | | | | | | | |
| CO4 | | Gain knowledge on various EDP organized by Government Sectors | | | | | | | | | | | | | | | | |
| CO5 | | Provide them the nature of economic development and entrepreneurial growth. | | | | | | | | | | | | | | | | |

ENTREPRENEURSHIP AND STARTUP ECOSYSTEM

Unit 1: Introduction to Entrepreneurship & Family Business

6 Hours

- Definition and Concept of entrepreneurship
- Entrepreneur Characteristics
- Classification of Entrepreneurs
- Role of Entrepreneurship in Economic Development –Start-ups

Unit 2: Family Business

6 Hours

Knowing the characteristics of Family business with discussion on few Indian cases of Family Business like Murugappa, Dabur, Wadia, Godrej, Kirloskar etc.

Unit 3: Evaluating Business opportunity

6 Hours

- Sources of business ideas and opportunity recognition
- Guesstimating the market potential of a business idea
- Feasibility analysis of the idea
- Industry, competition and environment analysis

Unit 4: Building Blocks of starting ventures

6 Hours

- Low cost Marketing using digital technologies
- Team building from scratch
- Venture Funding
- Establishing the value-chain and managing operations
- Legal aspects like IPR and compliances

Unit 5: Start-up Ecosystem

6 Hours

- Know the components of the start-up ecosystem including Incubators, Accelerators, Venture Capital Funds, Angel Investors etc.
- Know various govt. schemes like Start-up India, Digital India, MSME etc.
- Sources of Venture Funding available in India
- Source of Technology, Intellectual Property management

Total : 30 hours

| | Prerequisite - Basic Networking Knowledge: Familiarity with basic networking concepts such as IP addressing and network topologies. | | | | | |
| | Course Designed by – Faculty of Computer Applications | | | | | |

OBJECTIVES

- Understand the basic concepts and principles of computer networking.
- Familiarize students with the layered architecture (OSI and TCP/IP models).
- Explain protocols, standards, and technologies used in each layer.
- Provide knowledge of addressing, routing, and switching.
- Develop skills in designing and analyzing small to medium-sized networks.
- Introduce network security, wireless networks, and emerging trends.

COURSE OUTCOMES (COs)

CO1 Understand the fundamental concepts of Computer Networks and their applications.

CO2 Develop problem-solving skills related to network design, implementation, and troubleshooting

CO3 Implement network protocols and configure network devices.

CO4 Configure basic networking components and troubleshoot network issues.

CO5 Understand basic concepts of network security, firewalls, and encryption.

FACULTY OF COMPUTER APPLICATIONS

BCA-Full Time Program- Curriculum & Syllabus

Program Structure for BCA-DT (Full Time)

CBCA25C10

COMPUTER NETWORKS

UNIT I: Introduction to Computer Networks

9 Hours

Overview of Computer Networks: Definition and Objectives, Applications and Examples. **Network Components and Architecture, Network Models:** OSI Model: Layers and Functions, TCP/IP Model: Layers and Functions. **Network Topologies:** Physical vs. Logical Topologies, Common Topologies: Star, Ring, Bus, Mesh, Hybrid, Advantages and Disadvantages of Each Topology. **Data Transmission:** Analog vs. Digital Signals, Transmission Modes: Simplex, Half-Duplex, Full-Duplex, Bandwidth and Latency **Networking Devices:** Routers, Switches, Hubs, Bridges, Gateways, Functions and Configurations of Each Device.

UNIT II: Data Link Layer

9 Hours

Data Link Layer Fundamentals: Functions of the Data Link Layer, Framing, Error Detection, and Error Correction, Flow Control Mechanisms. **Ethernet:** Ethernet Standards and Frame Structure, MAC Addressing and ARP, Ethernet Switching: Basic Concepts and Methods.

UNIT III: Networking Protocols & Network Layer

9 Hours

Network Protocols: Introduction to TCP/IP Protocol Suite, IP Addressing: IPv4 and IPv6 Subnetting and CIDR Notation. **Address Resolution Protocol (ARP):** ARP Operation and Table, ARP Spoofing and Security Considerations. **Virtual LANs (VLANs):** Concept of VLANs, VLAN Tagging and Configuration, Benefits and Use Cases. **Network Layer:** IP Routing: Static vs. Dynamic Routing, Routing Protocols: RIP, OSPF, BGP, Network Address Translation (NAT),

UNIT IV: Transport Layer

9 Hours

Transport Layer: TCP vs. UDP: Characteristics and Use Cases, TCP Handshake and Connection Management, Flow Control and Congestion Control in TCP, **Congestion Control Algorithms:** Techniques: Slow Start, Congestion Avoidance, Fast Retransmit, Fast Recovery, TCP Variants: TCP Reno, TCP Vegas. **Quality of Service (QoS):** QoS Principles and Mechanisms, Differentiated Services (DiffServ) and Integrated Services (IntServ). **Network Security Fundamentals:** Threats and Vulnerabilities, Basic Security Mechanisms: Firewalls, VPNs, Encryption

UNIT V: Application Layer and Emerging Technologies

9 Hours

Application Layer Protocols: HTTP/HTTPS: Structure and Operation, FTP, SMTP, POP3, IMAP: Protocols and Uses, DNS: Domain Name System and Resolution **Network Applications:** Web Browsing, Email Communication, File Transfer, Voice over IP (VoIP) and Streaming. **Emerging Technologies:** Software-Defined Networking (SDN), Network Function Virtualization (NFV), Internet of Things (IoT) and Its Impact on Networking **Network Management:** SNMP: Simple Network Management Protocol, Network Monitoring Tools and Techniques. **Future Trends in Networking:** 5G and Beyond, Network Automation and Artificial Intelligence in Networking.

| CBDT25S04 | Build Back-end Application using Spring-L1 | L | T | P | C | TY/Lb/IE |
| | Prerequisite: Java Programming Fundamentals, Object-Oriented Programming Concepts, Exception Handling, Lambda Expressions, Java Collections | 3 | 0 | 4 | 5 | ETL |
| | | | | | | |
| | Course Designed by – Faculty of Computer Applications | | | | | |

OBJECTIVES:

- Understand Spring Framework fundamentals, including IoC, Dependency Injection, and bean lifecycle.
- Build Spring Boot applications with auto-configuration and property management.
- Develop RESTful web services with HTTP methods and JSON data handling.
- Integrate Spring Data JPA for database operations and manage full-stack application flow.
- Apply knowledge in a hands-on project involving development, testing, debugging, and documentation.

COURSE OUTCOMES (COs)

| | |
|-----|---|
| CO1 | Build and configure backend applications using the Spring Framework and Spring Boot. |
| CO2 | Structure and manage Java web applications efficiently using Maven build automation. |
| CO3 | Apply Inversion of Control (IoC) and Dependency Injection (DI) using annotations to create flexible, maintainable applications. |
| CO4 | Develop RESTful web services with Spring Boot and test them using tools like Postman. |
| CO5 | Perform data persistence operations using Spring Data JPA and connect applications to relational databases. |

CBDT25S04 BUILD BACK-END APPLICATION USING SPRING-L1

List of Lab Programs

1. Set up a basic Maven project and define dependencies for Spring Boot and JPA.
2. Create a simple Java application using Spring Framework with constructor-based and setter-based Dependency Injection.
3. Develop a Spring application that demonstrates the use of @Component, @Autowired, and @Bean annotations.
4. Implement and test different Bean scopes (singleton, prototype) and observe their behavior.
5. Build a basic Spring Boot application with a proper package structure and run it using Maven.
6. Create a REST controller that handles CRUD operations for a Product entity.
7. Use Postman to test various REST endpoints and analyze request-response cycles.
8. Develop a Spring Boot service that accepts a POST request with JSON data and returns a response.
9. Connect your Spring Boot application to a relational database using JPA and Hibernate.
10. Create a JPA entity and corresponding repository interface to perform database operations.
11. Perform CRUD operations on a Usertable using JpaRepository.
12. Add exception handling to your REST service using @ControllerAdvice and custom exceptions.
13. Log API requests and responses using Spring's logging mechanisms.
14. Demonstrate the difference between constructor injection and field injection in a sample service.
15. Use Maven to build and package your Spring Boot application into a .jar file.
16. Deploy your Spring Boot application locally and verify API endpoints.
17. Design and implement a service layer that encapsulates business logic between controller and repository.
18. Create a reusable utility class and demonstrate its use within multiple components using DI.
19. Write unit tests for a service class using JUnit and mock dependencies using Mockito.
20. Implement a complete backend for a Bookstore or Inventory Management System using Spring Boot and JPA.

| CBCA25C11 | ARTIFICIAL INTELLIGENCE | L | T | P | C | TY/Lb/IE |
| | | 3 | 0 | 4 | 5 | ETL |
| | Prerequisite - Basic understanding of computer science concepts, including data structures and algorithms. Proficiency in minimum one programming language, such as Python. Course Designed by – Faculty of Computer Applications | | | | | |

OBJECTIVES

- Understand the definition, history, and evolution of Artificial Intelligence.
- Identify different fields and applications of AI (e.g., robotics, computer vision, natural language processing, machine learning).
- Develop foundational skills in programming languages commonly used in AI (e.g., Python).
- Apply AI techniques to solve real-world problems (e.g., image classification, sentiment analysis, chatbots).
- Evaluate the ethical, legal, and societal implications of AI technologies.

COURSE OUTCOMES (COs)

| | |
|------------|---|
| CO1 | Understand the characteristics of rational agents, and the environment in which they operate, and gain insights about problem-solving agents. |
| CO2 | Gain insights about Uninformed and Heuristic search techniques and apply them to solve search applications. |
| CO3 | Appreciate the concepts of knowledge representation using Propositional logic and Predicate calculus and apply them for inference/reasoning. |
| CO4 | Obtain insights about Planning and handling uncertainty through probabilistic reasoning and fuzzy sets. |
| CO5 | Obtain a basic understanding of the AI domains and their applications and examine the legal and ethical issues of AI |

ARTIFICIAL INTELLIGENCE

Unit I: Introduction to AI

9 Hours

What is AI? Artificial Intelligence and its applications, Artificial Intelligence Techniques, Intelligent Advantages, and limitations of AI, Application domains of AI. Agents: Agents and environment, Learning Agents, the concept of Rationality, the nature of environment, the structure of Agents. Knowledge-Based Agents: Introduction to Knowledge-Based Agents. Problem-solving: Problem-solving agents. Hotbeds of AI Innovation.

UNIT II: Advanced Search Techniques

12 Hours

Problem solving techniques State space search, control strategies, heuristic search, Uninformed Search: DFS, BFS, Iterative Deepening Search. Informed Search: Best First Search, A* search, AO* search. Production system characteristics- Generate and test, Hill climbing-Constraints and Constraint Satisfaction Problems (CSPs), Mean-end analysis, Min-Max Search, Alpha-Beta Pruning.

UNIT III: Logical Reasoning and Uncertainty

12 Hours

Logic: Propositional logic, First-order predicate logic, Unification and lifting. Inference: Forward chaining, Backward chaining, Resolution, Truth maintenance systems. Handling Uncertainties: Non-monotonic reasoning, Probabilistic reasoning, Forward vs. Backward reasoning.

UNIT IV: Knowledge Representation of AI

12 Hours

Knowledge Representation schemes and reasoning Mapping between facts and representations, Approaches to knowledge representation, procedural vs declarative knowledge, Matching, conflict resolution, Expert systems:- Introduction, basic concepts, structure of expert systems, Introduction to Fuzzy set theory, fuzzy logic Weak and Strong filler structures, semantic nets, frame, conceptual dependency, scripts,

ARTIFICIAL INTELLIGENCE

List of Lab Programs

1. Write a Python program to simulate a simple reflex agent. Extend it to a model-based agent (include environment state).
2. Design a Python class for a Knowledge-Based Agent that uses simple if-else rules. Show how it can update its knowledge base and make decisions accordingly.
3. Demonstrate basic problem-solving using Breadth-First Search on a simple grid.
4. Implement Depth-First Search (DFS) on a small graph
1. 3.Solve the Water Jug Problem using Breadth First Search (BFS)
5. Implement a Hill Climbing search to find the peak in a numeric dataset
6. Implement **A*** search and **Best First Search** for solving 8-puzzle or pathfinding.
7. Implement the Minimax search algorithm for 2-player games. You may use a game tree with 3 plies.
8. Solve the 4-Queens Problem as a CSP backtracking problem.
9. Use constraint propagation to solve a Magic Square puzzle
10. Apply optimization techniques to find the maximum value in a list
11. Represent and evaluate propositional logic expressions.
12. Implement a basic rule-based expert system for weather classification.
13. Implement a basic AI agent with simple decision-making rules.
14. Implement a basic Rule-Based Chatbot.
15. Use constraint propagation to solve a Magic Square puzzle

DESIGN THINKING AND INNOVATION

Unit 1: Basics of Design Thinking

6 Hours

1. Understand the concept of innovation and its significance in business
2. Understanding creative thinking process and problem solving approaches
3. Know Design Thinking approach and its objective
4. Design Thinking and customer centricity – real world examples of customer challenges, use of Design Thinking to Enhance Customer Experience, Parameters of Product experience, Alignment of Customer Expectations with Product.

Unit 2: Design Thinking Process and Success Stories

6 Hours

1. Discussion of a few global success stories like AirBnB, Apple, IDEO, Netflix etc.
2. Explain the four stages of Design Thinking Process – Empathize, Define, Ideate, Prototype, Implement

Unit 3: Learning to Empathize and Define the Problem

6 Hours

1. Know the importance of empathy in innovation process – how can students develop empathy using design tools
2. Observing and assimilating information
3. Individual differences & Uniqueness Group Discussion and Activities to encourage the understanding, acceptance and appreciation of individual differences.
4. What are wicked problems
5. Identifying wicked problems around us and the potential impact of their solutions

Unit 4: Ideate, Prototype and Implement

6 Hours

1. Know the various templates of ideation like brainstorming, systems thinking
2. Concept of brainstorming – how to reach consensus on wicked problems
3. Mapping customer experience for ideation
4. Know the methods of prototyping, purpose of rapid prototyping.
5. Implementation

Unit 5: Feedback, Re-Design & Re-Create

6 Hours

1. Feedback loop, focus on User Experience, address ergonomic challenges, user focused design
2. Final concept testing,
3. Final Presentation – Solving Problems through innovative design concepts & creative solution

TOTAL: 30 Hours

OBJECTIVES:

- Develop a growth mindset by mastering time management and task prioritization.
- Learn effective communication and collaboration skills for working well in teams.
- Build confidence and positivity for successful interview preparation.
- Understand conflict management and interpersonal sensitivity in professional settings.
- Demonstrate skills through a practical project involving presentations and role-plays.

COURSE OUTCOMES (COs)

| | | | | | | | | | | | | | | |
|-----|--|-----|-----|-----|-----|-----|-----|-----------------------------|-----|-----|------|------|------|------|
| CO1 | Cultivate a growth mindset and embrace challenges and view setbacks as opportunities for growth. | | | | | | | | | | | | | |
| CO2 | Work effectively in diverse teams, navigate workplace dynamics, and resolve conflicts. Prioritize tasks and manage time efficiently to meet deadlines | | | | | | | | | | | | | |
| CO3 | Practice empathetic and professional communication in interviews, presentations, and team settings | | | | | | | | | | | | | |
| CO4 | Demonstrate readiness for professional interviews by applying interview preparation techniques, maintaining a positive attitude, and focusing on personal strengths | | | | | | | | | | | | | |
| CO5 | Apply learned skills in real-world scenarios through creating presentations or role-plays that showcase time management, conflict resolution, teamwork, and interview strengths. | | | | | | | | | | | | | |

CBDT25S05

Professional Skills 1

UNIT 1

8 HOURS

Adopt a growth mindset: Managing Time Effectively, Prioritize Tasks, Say No Politely, Manage Conflicts.

UNIT 2

8 HOURS

Working Well in Teams: Asking for Help, Clear Communication Skills, Understanding Others' Feelings.

UNIT 3

7 HOURS

Interview Preparation: Navigate Interviews, Interview Pre-prep, being positive, Focus on Strength.

UNIT 4

7 HOURS

Professional Practice Project: Create a presentation or role-play showcasing team conflict resolution, time management, and strengths for interviews.

Total : 30 hours

Text Books (Latest Edition):

FACULTY OF COMPUTER APPLICATIONS
BCA-Full Time Program- Curriculum & Syllabus
Program Structure for BCA-DT (Full Time)

CBDT25S05

Professional Skills 1

List of Lab Programs

- Write about a personal experience where you faced a challenge or setback. How did you overcome it? If given another chance, what would you do differently?
- Explain how you planned, prioritized, resolved conflicts and completed the projects as per the deadlines.
- Role-plays to simulate time management and saying no politely.
- Work in small teams to complete a group task. evaluate each member's role, contributions, and team dynamics.
- Identify a skill you struggle with and seek assistance from a peer, mentor, or faculty member. Document how you framed the request and the outcome.
- Assess others project and capture the details their thoughts, feelings, and needs to practice understanding others' perspectives.
- Participate in a mock interview as a candidate and assess self-performance
- Participate in a mock interview as an interviewer and provide constructive feedback on each other's strengths and improvement areas.
- Write a self-analysis report identifying personal strengths, weaknesses, and strategies for improvement in a workplace setting.

| 4 | CO3 | 3 | 3 | 2 | | | 1 | | | 2 | 3 | 3 | 3 | 3 |

Students will have an opportunity to expose their knowledge and talent to make an innovative project. Students are supposed to do innovative projects useful to industries/society in the area of relevant field, inter and multi-disciplinary areas, under the guidance of a staff member. They have to prepare a project report and submit to the department.

At the end of the semester Viva-Voce examination will be conducted by the internal Examiner duly appointed by the Head of the department and the students will be evaluated.

BCA-Full Time Program- Curriculum & Syllabus
Program Structure for BCA-DT (Full Time)

| | | | | | | |
|------------------|--|----------|----------|----------|----------|-----------------|
| CBDT25C04 | Gen AI Advanced Prompt Engineering and LLMs | L | T | P | C | TY/Lb/IE |
| | | 2 | 0 | 4 | 4 | ETL |
| | Prerequisite: Proficiency in Java Programming, Spring Boot, Maven, REST APIs, HTTP Methods, JSON, Postman | | | | | |
| | Course Designed by – Faculty of Computer Applications | | | | | |

OBJECTIVES:

- Understand the fundamentals of prompt engineering, including structure and optimization techniques.
- Learn to interact with large language models (LLMs) using Java API calls and handle responses effectively.
- Explore practical GenAI use cases like text generation, summarization, and sentiment analysis in backend services.
- Study real-world LLM applications across industries and evaluate ethical considerations in AI use.
- Apply knowledge through a hands-on project involving design, development, testing, and documentation.

COURSE OUTCOMES (COs)

| | |
|-----|--|
| CO1 | Use advanced prompt engineering techniques to optimize outputs from Large Language Models (LLMs). |
| CO2 | Learn to programmatically interact with LLMs using Java SDKs and REST APIs via tools like the Java HTTP Client. |
| CO3 | Understand and apply ethical practices in GenAI, including bias mitigation, data privacy, regulatory compliance, and fairness in AI systems. |
| CO4 | Build foundation skills for integrating GenAI capabilities into real-world Java applications. |
| CO5 | |

Mapping of Course Outcomes with Program outcomes (Pos)

CBDT25C04

Gen AI Advanced Prompt Engineering and LLMs

UNIT-1

7 HOURS

Introduction to Prompt Engineering: Basics of Prompt Engineering, Prompt Structure, Optimization Techniques, Complex Prompts, Common Pitfalls, Troubleshooting. **Interaction with LLMs using Java:** Using Java HTTP Client, Making API Calls to OpenAI/Hugging Face, Request Handling, Response Processing, Error Handling. **GenAI Use Cases in Backend Services:** Text Generation, Summarization, Sentiment Analysis, Text Classification, Language Translation, Use Cases, Output Quality.

UNIT-2

7 HOURS

Case Studies and Real-World Applications: LLM-Enabled Backend Applications in Customer Service, Education, Marketing, and more domains.

UNIT-3

7 HOURS

Ethics and Responsible AI: Biases in AI, Bias Mitigation, Privacy Safeguards, Regulatory Compliance, Fairness, Ethical Frameworks, Accountability Measures.

UNIT-4

9 HOURS

Project and Summative Assessment: Project Planning and Design, Solution Development, Testing and Debugging, Review and Refactoring, Project Documentation and Presentation, Summative Quiz

Total : 30 hours

Text Books

CBDT25C04

Gen AI Advanced Prompt Engineering and LLMs

List of Lab Programs

1. Design an optimized few-shot prompt for generating technical documentation (e.g., API usage guides). Use prompt variations to reduce hallucinations and ensure accurate information retrieval.
2. Develop a Java-based REST client that interacts with an LLM API (e.g., OpenAI or Hugging Face) to generate contextual customer support responses. Experiment with zero-shot, one-shot, and few-shot prompts to evaluate differences.
3. Implement and evaluate chain-of-thought prompting for summarizing long legal or technical documents. Compare results with direct summarization prompts to assess output clarity and completeness.
4. Build a Spring Boot chatbot service that refines user-generated prompts before sending them to an LLM. Integrate the ReAct prompting method to enable reasoning and self-correction in conversations.
5. Create an API-driven content pipeline using Java and Spring Boot to automate blog post generation. Store generated content in a MongoDB or relational database.
6. Build a feedback processing service that uses LLM-powered sentiment analysis and categorizes responses. Apply chain-of-thought reasoning to improve the classification of complex feedback.
7. Integrate multiple GenAI APIs (e.g., OpenAI + Hugging Face) in a backend workflow to first generate content and then detect and flag toxic or biased text using few-shot and ReAct prompting methods.
8. Implement a Java-based translation microservice using an LLM API to translate text between dialects. Use few-shot prompting and evaluate translation quality across regional variants.
9. Develop an LLM-enabled resume screening API that extracts, classifies, and ranks applicant details based on job role fit. Secure the service using JWT-based authentication.
10. Build a domain-specific knowledge assistant (e.g., for legal or healthcare domains) powered by few-shot prompting and chain-of-thought reasoning. Implement as a Spring Boot microservice.
11. Design a backend service that generates marketing email templates tailored to customer segments. Use GenAI and structured data inputs to personalize output.
12. Create an FAQ generator microservice that parses product documentation and user queries to produce relevant FAQs. Use few-shot and chain-of-thought prompting for multi-step question handling.
13. Develop a tool to compare LLM outputs from different providers (e.g., OpenAI vs Hugging Face) for political or policy content. Analyze bias and inconsistencies in generated summaries.
14. Implement an AI audit backend module that flags potentially biased, unfair, or ethically questionable content. Use ReAct prompting and chain-of-thought logic to explain each flag raised.
15. Build a legal document reviewer tool that analyzes contracts for fairness. Use few-shot prompting and CoT (Chain-of-Thought) to reason through clauses and detect implicit bias.

Discipline Specific Electives

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

| | | | | | | |
|-----------|--|----------|----------|----------|----------|-----------------|
| CBCA25E01 | BASICS OF DATA ANALYTICS USING SPREADSHEET | L | T | P | C | Ty/Lb/IE |
| | | 2 | 0 | 2 | 3 | ETL |
| | Prerequisite : Knowledge on basics of mathematical & Statistical concepts such as arithmetic, percentages, averages | | | | | |
| | Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- To understand the general purpose of MS Excel and its built in functions for data analysis.
- To understand the importance of ROC curve and its use in finding the fitness of classification model.
- To know the basics of macros in MS Excel.
- To understand the working knowledge in MS Excel for linear regression analysis.

COURSE OUTCOMES(Cos)

students will be able to do data analytics using MS Excel

| | |
|------------|---|
| CO1 | In this course, you will learn how to perform data analysis using Excel's most popular features |
| CO2 | You will learn how to create pivot tables from a range with rows and columns in Excel. |
| CO3 | Pivots are used in many different industries by millions of users who share the goal of reporting the performance of companies and organizations. |
| CO4 | In addition, Excel formulas can be used to aggregate data to create meaningful reports. |
| CO5 | To complement, pivot charts and slicers can be used together to visualize data and create easy to use dashboards. |

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

CBCA25E01 BASICS OF DATA ANALYTICS USING SPREADSHEET

UNIT I: Introduction to Data Analytics

7 hours

Understanding data and its types (structured, unstructured, semi-structured) - What is Data Analytics - Types of Data Analytics - Importance of Data Analytics - Applications of Data Analytics.

UNIT II: Spreadsheet Navigation and Formatting

7 hours

Selecting Columns & Rows, Changing Column Width & Row Height, Auto fitting Columns & Rows, Hiding/Unhiding Columns & Rows, Inserting & Deleting Columns & Rows, Cell, Address of a cell, Components of a cell – Format, value, formula, Use of paste and paste special

UNIT III : Formulas, Functions, and Basic Charts

7 hours

Creating Formulas, Formula Functions : Sum, Average, if, Count, max, min, Upper, Lower, Using AutoSum, Advance Formulas: Concatenate, Vlookup, Hlookup, Match, Countif, Text, Trim - Creating Charts, Different types of chart, Formatting Chart Objects, Changing the Chart Type, Showing and Hiding the Legend, Showing and Hiding the Data Table

UNIT IV : Advanced Charts, Data Analysis, and PivotTables

9 hours

Creating Charts, Different types of chart, Formatting Chart Objects, Changing the Chart Type, Showing and Hiding the Legend, Showing and Hiding the Data Table- Data Analysis : Sorting, Filter, Text to Column, Data Validation- PivotTables : Creating PivotTables, Manipulating a PivotTable, Using the PivotTable Toolbar, Changing Data Field, Properties, Displaying a PivotChart, Setting PivotTable Options, . Adding Subtotals to PivotTables

Total:30 hours

Text Book:

1. "Spreadsheet Modeling and Decision Analysis: A Practical Introduction to Business Analytics" by Cliff T Ragsdale, Cengage learning asia pet. 2015

REFERENCE BOOKS

2. "Excel 2019 Bible" by Michael Alexander, Richard Kusleika, and John Walkenbach, John Wiley & Sons, 25 Sept 2018
3. "Mastering Excel" by WebTech Solutions, Khanna Publishing House, 2024.

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

CBCA25E01

BASICS OF DATA ANALYTICS USING SPREADSHEET

List of lab programs:

1. Basic Arithmetic and Logical Functions (SUM, AVERAGE, MIN, MAX, ROUND, IF, AND, OR, IFERROR)
2. Importing Data from Various Sources (CSV, text files)
3. Data Transformation Techniques (Text-to-columns, data validation)
4. Text Functions for Data Manipulation (TRIM, CLEAN, TEXT, RIGHT, LEFT, MID)
5. Lookup and Reference Functions (VLOOKUP, HLOOKUP, INDEX, MATCH)
6. Data Aggregation Techniques (SUMIFS, COUNTIFS, AVERAGEIFS)
7. Creating Various Chart Types (Bar, line, pie, scatter)
8. Data Visualization Best Practices (Choosing the right chart, formatting, styling)
9. Creating and Customizing PivotTables
10. Create and Customizing Pivot Charts

| CBCA25E02 | DATA VISUALIZATION | L | T | P | C | Ty/Lb/IE |
| | | 2 | 0 | 2 | 3 | ETL |
| | Prerequisite: Basic knowledge of data structures, such as tables and databases. Basic understanding of data analysis concepts and familiarity with data types. Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- To give overview of descriptive and inferential statistics.
- To provide basics of R and Python.
- To manipulate and visualize data using R, python and Watson Studio.
- To focus on plots using Matplotlib and seaborn.
- To analyze data using various visualization tools.
- To create maps in python using folium.

COURSE OUTCOMES (Cos)

Students completing this course were able to

| | |
|------------|--|
| CO1 | Differentiate descriptive and inferential statistics. |
| CO2 | Use R to do statistics and to visualize data. |
| CO3 | Visualize analyzed data using IBM Watson Studio. |
| CO4 | Familiar with python scripts used for visualization. |
| CO5 | Use advance visualization tool and sea born functionalities. |

CBCA25E02

DATA VISUALIZATION

UNIT I : INTRODUCTION TO STATISTICS

7 hours

Data , Data collection methods–Descriptive Statistics – Measures of Central Tendency & Dispersion –Inferential Statistics– Population , Sampling methods –Random Variables, Probability Distribution , Normal Distribution .

UNIT II : VISUALIZATION USING R

7 hours

Basics of R programming , Data manipulation with R(Packages : dplyr, tidyr , data.table , lubridate) Data visualization with R (ggplot2 package)

UNIT III : DATA ANALYSIS USING PYTHON

7 hours

Basics of Python ,Numpy Library – Arrays creation , Indexing , Slicing , Aggregation , Reshaping , Pandas Library – Series , Data Frame , using csv & excel files , Data cleaning & manipulation , Merging & Joining.

UNIT IV:VISUALIZATION USING PYTHON

9 hours

Matplotlib Library – Line plot , Scatter plot , Histogram , Histogram , Box plot , Pie chart . Seaborn Library – Basic plots , Pair plots , Heatmaps .

Total: 30 hours

TEXT BOOKS:

1. "Storytelling with Data: A Data Visualization Guide for Business Professionals" by Cole Nussbaumer Knaflic, Wiley; 1st edition, 2015.
2. "The Visual Display of Quantitative Information" by Edward Tufte, Graphics Press USA; 2nd edition, 2001.

DATA VISUALIZATION

List of lab programs:

1. Do the data manipulation operations for iris and mtcars dataset using dplyr package and obtain the results for following functions:

- i. filter
- ii. select
- iii. arrange
- iv. summarise
- v. mutate

2. Create a data frame and do the following operations using tidyr package

- i. gather
- ii. spread
- iii. separate
- iv. unite

3. Do the following operations for any external dataset using data. table package

- i. Select a subset row
- ii. Select a column with particular values
- iii. Select columns with multiple values
- iv. Select a column to return a vector
- v. Select multiple columns
- vi. Returns the sum and standard deviation
- vii. Sum of selected columns

4. Do the following visualizations for any external csv file

- i. Line graph
- ii. Bar graph
- iii. Histogram
- iv. Scatter plot
- v. Pie chart

5. Do the following Data analysis for your own Data set using pandas package.

- i. Make the first column as index
- ii. Select single column and print the data
- iii. Select multiple columns and print the data
- iv. Select single column and print the last five elements of the data.
- v. Select multiple rows and print the first five elements of the data
- vi. Select multiple rows and columns from the data set and print it.
- vii. Select all the rows and some columns (more than two) from the data set and print it.
- viii. Print the same data set again and delete the first column from the data set and print it.
- ix. Change the 1st, 2nd and 3rd columns name and print it

6. a. Reading and Writing CSV/Excel Files using Pandas

b. Pandas Series and Data Frame Operations

7. Data cleaing and Manipulation using Panda

a. Data Cleaning: Handling Missing Values and Outliers.

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

- b. Data Manipulation: Sorting, Filtering, and Grouping
8. Consider any csv file and do the following visualization using matplotlib package
- Line graph /with style
 - Bar Graph
 - Histogram
 - Scatter plot
 - Pie chart
9. Merge the two data sets (any two csv files) and perform the following join operations
- Natural join
 - Full outer join
 - Left outer join
 - Right outer join
10. Do the following operations for your own data using pandas
- Descriptive data analytics using pandas
 - Print the data based on particular year, particular month and particular data
 - Filter the data based on conditions (any conditions)
 - Select any two columns and do the pandas sort operations (ascending and descending)

| | | 3 | 0 | 0 | 3 | TY |
| | Prerequisite: Basic understanding of statistics (mean, variance), familiarity with spreadsheets/databases Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- To understand the overview and definition of Data Science with its crucial role in current business world.
- To understand the importance of mathematics & Statistics in Data Science.
- To understand the role of machine learning techniques in Data Science and its different types.
- To know the integrated role of computers and its components in Data Science
- To understand the flow and process model of data science project management.

COURSE OUTCOMES(Cos)

Students completing this course were able to

| | |
|-----|--|
| CO1 | Describe what Data Science is and the skill sets needed to be a data scientist |
| CO2 | Explain the significance of exploratory data analysis (EDA) in data science |
| CO3 | Ability to learn the supervised learning, SVM |
| CO4 | Apply basic machine learning algorithms (Linear Regression) |
| CO5 | Explore the Networks, Page Rank |

INTRODUCTION TO DATA SCIENCE

Unit – I: Introduction to Data Science

9 hours

Evolution of Data Science – Data Science Roles – Stages in a Data Science Project – Applications of Data Science in various fields – Data Security Issues.

Unit – II: Data Collection and Data Pre-Processing

9 hours

Data Collection Strategies – Data Pre-Processing Overview – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization.

UNIT– III: Exploratory Data Analytics

9 hours

Descriptive Statistics – Mean, Standard Deviation, Skewness and Kurtosis – Box Plots – Pivot Table – Heat Map – Correlation Statistics – ANOVA.

UNIT– IV: Model Development

9 hours

Simple and Multiple Regression – Model Evaluation using Visualization – Residual Plot – Distribution Plot – Polynomial Regression and Pipelines – Measures for In-sample Evaluation – Prediction and Decision Making.

UNIT– V: Model Evaluation

9 hours

Generalization Error – Out-of-Sample Evaluation Metrics – Cross Validation – Overfitting – Under Fitting and Model Selection – Prediction by using Ridge Regression – Testing Multiple Parameters by using Grid Search.

Total: 45 hours

| | Prerequisite: : Familiarity with data analysis tools, especially SQL, NoSQL ,SAS, and Hadoop. | | | | | |
| | Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- Be familiar with mathematical foundations of data mining tools.
- To Understand and implement classical models and algorithms in data warehouses and data mining.
- To Characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering.
- To Develop skill in selecting the appropriate data mining algorithm for solving practical problems.

COURSE OUTCOMES(Cos)

Students completing this course were able to

| | |
|------------|--|
| CO1 | Understand the functionality of the various data mining and data warehousing component |
| CO2 | Appreciate the strengths and limitations of various data mining and data warehousing models. |
| CO3 | Explain the analyzing techniques of various data |
| CO4 | Describe different methodologies used in data mining and data warehousing. |
| CO5 | Compare different approaches of data warehousing and data mining with various technologies. |

DATA MINING AND WAREHOUSING

UNIT I : INTRODUCTION TO DATA WAREHOUSING

9 hours

Introduction to Data Warehousing – Defining features , architecture of a Data Warehousing – Data Warehousing Schema – Dimensional modeling – ETL Process – Testing, Growth and maintenance - OLAP in Data Warehousing.

UNIT II : DATA MINING FUNDAMENTALS AND PREPROCESSING

9 hours

Data Mining - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Mining Frequent patterns , Associations & correlations - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association rules

UNIT III : CLASSIFICATION AND PREDICTION TECHNIQUES

9 hours

Classification and Prediction - Issues Regarding Classification and Prediction – Classification by Decision Tree Induction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines - Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor.

UNIT IV: CLUSTERING AND UNSUPERVISED LEARNING

9 hours

Cluster Analysis - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods

UNIT V : MINING COMPLEX DATA AND APPLICATIONS

9 hours

Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web

Total: 45 hours

TEXT BOOKS:

1. Jiawei Han & Micheline Kamber(2008), Data Mining Concepts and Techniques (2nd ed) , Elsevier, Reprint.

| CBCA25E07 | SOFTWARE PROJECT MANAGEMENT | L | T | P | C | Ty/Lb/IE |
| | | 3 | 0 | 0 | 3 | TY |
| | Prerequisite: Basic knowledge in Software Engineering. | | | | | |
| | Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- To impart the basic concepts of Project Management Frame work.
- To provide project planning and scheduling project monitoring and selection of appropriate project approach.
- To Learn about the Project Management Knowledge to discuss the notion of risks and the risk management and to study Resource allocation.
- To follow International standards for Software Quality & To examine case study for the Project.

COURSE OUTCOMES (Cos)

Students completing this course were able to

| | |
|------------|---|
| CO1 | Understand the fundamentals of software project management, including its scope, importance, and role in the software development life cycle. |
| CO2 | Apply project planning techniques, including project scheduling, effort estimation, and resource allocation. |
| CO3 | Identify, analyze, and manage risks associated with software projects. |
| CO4 | Use project monitoring and control mechanisms to track progress and ensure project alignment with goals. |
| CO5 | Demonstrate the ability to work as part of a project team, manage communication, and resolve conflicts effectively. |

SOFTWARE PROJECT MANAGEMENT

UNIT I : Introduction to Software Projects

9 hours

An Overview of Project Planning – Project Management and Evaluation .

UNIT II: Selection of an appropriate Project approach

9 hours

Software effort Estimation -Activity Planning :- Project Schedules – Sequencing and Scheduling Projects – Network Planning Model – forward and backward pass-Identifying the Critical path-Activity float-Shortening Project Duration – Identifying Critical Activities-precedence networks.

UNIT III: Software quality assurance plan & Risk Management

9 hours

Resource Allocation – Monitoring and Control, Reviews and Audits – Management.

UNIT IV : Models

9 hours

ISO 9000 model, CMM model – Comparisons - ISO 9000 weaknesses - Managing People and Organizing Teams – Software Quality -Planning for Small Projects.

UNIT V : Case Study

9 hours

PRINCE Project Management, BS 6079:1996

Total: 45 hours

TEXT BOOK:

1. Mike Cotterell, Bob Hughes , —Software Project Management, Inclination/Thomas Computer Press, 4th Edition, 2004.
Chapters : 1-13

| | Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- To impart the basic design and communication model of Internet of Things.
- To understand State of the Art- Internet of Things Architecture.
- To provide knowledge about protocols used in Internet of Things.
- To introduce about various interface supplied in Internet of Things.
- To classify the real world Internet of Things Design constraints and its implementation.
- To provide ideas of automation and its applications using Internet of Things.

COURSE OUTCOMES(Cos)

Students completing this course were able to

| | |
|------------|---|
| CO1 | Understand the fundamental concepts, architecture, and components of IoT systems |
| CO2 | Identify and apply various sensors, actuators, and embedded systems used in IoT applications. |
| CO3 | Demonstrate the ability to interface hardware components (e.g., Arduino, Raspberry Pi) and implement basic IoT solutions. |
| CO4 | Collect, process, and transmit data from IoT devices to cloud platforms for storage and analysis. |
| CO5 | Evaluate security, privacy, and ethical concerns in IoT systems. |

| | | 3 | 0 | 0 | 3 | TY |
| | Prerequisite: Basic Knowledge in Information System Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- Enables to know the basic purpose of studying MIS and how it is important in the field of computer applications.
- Briefing about how MIS plays key role in communicating the information in efficient manner.
- To identify the challenges and enabling to choose the best course of action.
- Enabling MIS to bring out the strength of the management & making it as opportunity for overall growth of the organization.
- Imparting knowledge on how MIS is making decision as effective, quick & timely manner.

COURSE OUTCOMES(Cos)

Students completing this course were able to

| | |
|------------|---|
| CO1 | Understand the role and importance of Management Information Systems in business decision-making and organizational strategy. |
| CO2 | Identify and explain the components and types of information systems, including TPS, MIS, DSS, and ERP. |
| CO3 | Analyze how information systems support business operations, management, and competitive strategies. |
| CO4 | Evaluate the ethical, legal, and security issues associated with information systems in organizations. |
| CO5 | Apply knowledge of MIS to solve real-world business problems through case studies or projects. |

CBCA25E09

MANAGEMENT INFORMATION SYSTEM

UNIT I: Foundation of Information System

9 hours

Introduction to Information System and MIS – Decision support and decision making systems - systems approach - the systems view of business - MIS organization within company - Management information and the systems approach

UNIT II: Information Technology

9 hours

A manager's overview - managerial overviews - computer hardware and software - DBMS - RDBMS – Telecommunication

UNIT III: Conceptual system design

9 hours

Define the problems - set systems objective - establish system – constraints - determine information needs determine information sources - develop alternative conceptual design and select one document the system concept - prepare the conceptual design report

UNIT IV: Detailed system design

9 hours

Inform and involve the organization - aim of detailed design - project management of MIS detailed design - identify dominant and trade of criteria - define the sub systems - sketch the detailed operating sub systems and information flow - determine the degree of automation of each operation - inform and involve the organization again - inputs outputs and processing - early system testing – software - hardware and tools propose an organization to operate the system - document the detailed design - revisit the manager user

UNIT V : Implementation evaluation and maintenance of the MIS

9 hours

Plan the implementation - acquire floor space and plan space layouts - organize for implementation - develop procedures for implementation - train the operating personnel - computer related acquisitions - develop forms for data collection and information dissemination - develop the files test the system - cut-over - document the system - evaluate the MIS control and maintain the system - Pitfalls in MIS development.

OPEN SOURCE PROGRAMMING

UNIT I : Introduction to Open Source

12 hours

Definition, Open Source History, Initiatives , Free Software, Free Software vs. Open Source software, Public Domain Software, FOSS does not mean no cost. History: BSD, The Free Software Foundation and Open Source GNU Project.

UNIT II : Principle and methodologies

12 hours

Philosophy: Software Freedom, Open Source Development Model Licences and Patents: What Is A License, Important FOSS Licenses (Apache, BSD,GPL, LGPL), copyrights and copy lefts, Patents Economics of FOSS : Zero Marginal Cost, Income-generation opportunities

UNIT III : Case Studies

12 hours

Apache, BSD, Linux, Mozilla (Firefox), Wikipedia, Joomla, GCC, Open Office. Starting and Maintaining an Open Source Project, Open Source Hardware, Open Source Design, Open source Teaching. and Open source media.

UNIT IV : IoT

12 hours

Definitions - overview, applications, potential & challenges, and architecture. IoT examples: Case studies, e.g. sensor body-area-network and control of a smart home.

UNIT V : INTRODUCTION TO BIG DATA

12 hours

Distributed file system – Big Data and its importance, Four Vs, Drivers for Big data, Big data analytics, Big data applications. Algorithms using map reduce, Matrix-Vector Multiplication by Map Reduce.

Total: 60 hours

SOFTWARE TESTING

UNIT I: Testing Environment And Test Processes

12 hours

Introduction – World Class Software Testing Model – Building a Software Testing Environment - Overview of Software Testing Process – Organizing for Testing : Requirement Specifications (Software, User, market, Business) – Static & Dynamic Testing : Verification & Validation - Analyzing and Reporting Test Results – Post Implementation Analysis

UNIT II: Developing the Test Plan

12 hours

Using White Box Approach to Test design – Code Functional Testing – Coverage and Control Flow Graphs – Using Black Box Approaches to Test Case Design – Random Testing – Requirements based testing –Decision tables –State-based testing – Cause-effect graphing – Error guessing – Compatibility testing – Levels of Testing : Functionality Testing - Performance Testing - Unit Testing - Integration Testing - System Testing – User Acceptance Testing - Compatibility Testing

UNIT III: Software Testing Life Cycle

12 hours

Software Testing Life Cycle: SDLC & STLC , Stages – System Study – Test case design, Review, Approval, Execution - Test case Templates: Header - Body & Footer Templates – Traceability Matrix - Defect Tracking Templates – Postmortem Report (Achievements & Comments) – Rapid Application Development Testing – Testing in a Multiplatform Environment – Testing Software System Security - Testing Web Applications – Web based system – Web Technology Evolution – Testing a Data base

UNIT IV: TEST AUTOMATION

12 hours

Introduction : Software Testing Tools (Win Runner, Load Runner) - Software Test Automation – Skills needed for Automation – Scope of Automation – Design and Architecture for Automation – Requirements for a Test Tool – Challenges in Automation – Tracking the Bug

UNIT V: Quality Assurance & Quality Control

12 hours

Complexity Metrics and Models – Quality Management Metrics - Defect Removal Effectiveness Quality Function Deployment – Taguchi Quality Loss Function.

| CBCA25E13 | CLOUD COMPUTING FOR DATA ANALYTICS | L | T | P | C | Ty/Lb/IE |
| | | 3 | 0 | 4 | 5 | ETL |
| | Prerequisite: : Basic understanding of cloud platforms (e.g., AWS), foundational programming skills | | | | | |
| | Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- Cloud computing is a colloquial expression used to describe a variety of different computing concepts that involve a large number of computers that are connected through a real-time communication network.
- In science, cloud computing is a synonym for distributed computing over a network and means the ability to run a program on many connected computers at the same time.
- This course covers basic concepts of cloud types, services and security etc.

COURSE OUTCOMES(Cos)

At the end of the course, the students will be able to

| | |
|------------|--|
| CO1 | Learn the underlying principles of Cloud Technology and various types of cloud computing architecture and types. |
| CO2 | Evaluate between different cloud solutions offered by various providers based on their merits and demerits. |
| CO3 | Understand the Cloud Cost Management and Selection of Cloud Provider |
| CO4 | Understand the IT governance in cloud computing. |
| CO5 | Track the Ten cloud do and do not's. |

CLOUD COMPUTING FOR DATA ANALYTICS

UNIT 1: Introduction

9 hours

Characteristics, Cloud Models, Cloud Computing Concepts and Technologies, Cloud Computing Services and Platform, Virtualization, Elastic Compute Cloud, Auto Scaling, Elastic Load Balancing, Virtual Private Cloud

UNIT 2: Cloud Application Development

12 hours

Design Considerations, Design Methodologies, Reference Architectures for Cloud Applications, Introduction to Python Framework, RESTful Web API

UNIT 3 : Serverless Applications

12 hours

Introduction to Serverless Computing, Serverless Use Cases, Serverless Design Patterns, Lambda, Serverless Concepts

UNIT 4: Cloud Storage

12 hours

Elastic Block Store (EBS), Storage Gateway, Relational Databases, NoSQL Databases. Batch Analytics and Real-time Analytics - HDFS, Hadoop, MapReduce, Pig, Sparks

Total: 45 hours

CLOUD COMPUTING FOR DATA ANALYTICS

List of Programs:

1. Install Virtual box/VMware/ Equivalent open source cloud Workstation with different flavors of Linux or Windows OS on top of windows 8 and above.
2. Install a C compiler in the virtual machine created using a virtual box and execute Simple Programs
3. Find a procedure to transfer the files from one virtual machine to another virtual machine.
4. Create and host static websites using cloud service providers.
5. Create VMs to deploy simple applications.
6. Deploy SaaS/PaaS/IaaS applications.
7. Develop cloud application with Python web application framework.
8. Develop applications using Map Reduce programming model
9. Install Google App Engine. Create a hello world app and other simple web applications using python/java
10. Install Hadoop single node cluster and run simple applications like word count

OBJECTIVES

- This course aimed to Introduce the concepts of big data analytics to the students.
- Introduces the big data framework, its characteristics and use cases associated with it.
- A concise introduction to Hadoop framework will prepare students to handle industry scenarios of big data analytics.

COURSE OUTCOMES (Cos)

Students completing this course were able to

| | |
|------------|--|
| CO1 | Understand the characteristics of big data |
| CO2 | Explore Hadoop framework and its components |
| CO3 | Use HDFS and Map Reduce to analyze various industry use cases of big data analytics. |
| CO4 | Understand the YARN Infrastructure |
| CO5 | Learning different Sorting, Shuffling. |

BIG DATA ANALYTICS

UNIT I - Introduction to Big Data, Characteristics and its Use Case

9 hours

Introduction – Why Big data - What is big data – Facts about Big Data - Importance of Big Data Evaluation of Big Data – Market Trends – Sources of Data Explosion – Types of Data – Case Study for Netflix and the house of card. Need of Big Data – Big Data and its sources – Characteristics of Big Data – Difference between Traditional IT Approach and Big Data Technology – Capabilities of Big Data – Handling Limitations of Big Data - Technologies Supporting Big Data - Big Data Use Cases.

UNIT II - Introduction to Hadoop

12 hours

Introduction – Why Hadoop – What is Hadoop – History and Milestone of Hadoop – Core Components of Hadoop – Difference between Regular File System and HDFS – Common Hadoop Shell Commands – Hadoop Configuration.

UNIT III - Hadoop Distributed File System (HDFS)

12 hours

Concepts and Architecture - Data Flow (File Read, File Write) - Fault Tolerance - Java Base API - Different Daemons in Hadoop cluster (NameNode, Secondary NameNode, Job Tracker, Task Tracker and DataNode) - Loading a dataset into the HDFS.

UNIT IV - INTRODUCTION TO YARN and MapReduce

12 hours

What is YARN – YARN Infrastructure - Introduction of MapReduce – Analogy of MapReduce – MapReduce Architecture - Example of MapReduce – Sorting, Shuffling – Reducing – Combiner – Partitioner – Creating MapReduce program by using Eclipse.

Total : 45 hours

TEXT BOOKS:

BIG DATA ANALYTICS

List of Lab Programs:

1. Install and Configure Hadoop (Set up Hadoop and understand its processes)
2. Implement Basic Commands in Hadoop (Learn to manipulate big data using Hadoop commands)
3. Implement HDFS and Explore Its Characteristics (Understand HDFS and its features)
4. Explore the Properties of YARN (Learn about resource management in Hadoop)
5. Import Data from MySQL into HDFS (Integrate relational data with Hadoop)
6. Import Data from MS Excel into HDFS (Integrate Excel data with Hadoop)
7. Implement Reducer in Hadoop (Write reducer programs for data aggregation)
8. Implement Partitioner in Hadoop (Optimize data distribution to reducers)
9. Implement Nested MapReduce (Solve complex problems using nested MapReduce)
10. Create a scenario based on real time domain

INTRODUCTION TO ML

List of Lab programs:

1. Develop a Python program to create a NumPy array and apply matrix operations.
2. Develop a Python program to create a pandas DataFrame from a list of data.
3. Develop a Python program to analyze the dataset using pandas and matplotlib library.
4. Develop a program to compute Mean, Median, Mode, Variance, and Standard Deviation using datasets
5. Develop a Python program to implement Simple Linear Regression and plot the graph.
6. Develop a Python program to classify English text using Naive Bayes' theorem.
7. Develop a Python program to implement a single-layer perceptron.
8. Implement the Naive Bayesian classifier for a sample training dataset stored as a CSV file.
9. Compute the accuracy of the classifier, considering a few test datasets.
10. Implement the basic Averaging method & Max Voting ensemble methods to focus on a classification problem.
11. Implement the k-Nearest Neighbor algorithm to classify the iris dataset. Print both correct and wrong predictions.

DATA SECURITY AND PRIVACY

UNIT I: SECURITY ARCHITECTURE & OPERATING SYSTEM SECURITY FUNDAMENTALS

12 hours

Security Architecture: Introduction to Information Systems, Database Management Systems (DBMS), and Information Security Architecture, Asset Types and Value, Security Methods -Operating System Security Fundamentals: Overview of Operating Systems, Security Environment, Components, Authentication Methods, User Administration, Password Policies, Vulnerabilities and E-mail Security.

UNIT II: ADMINISTRATION OF USERS & PROFILES, PASSWORD POLICIES, PRIVILEGES AND ROLES

12 hours

User Administration: Authentication: Creating Users (SQL Server), Modifying/Removing Users, Default and Remote Users, Database Links, Linked Servers, Best Practices for Administrators and Managers- Profiles, Password Policies, Privileges, and Roles: Defining and Using Profiles, Designing Password Policies, Granting/Revoking User Privileges and Roles.

UNIT III: DATABASE APPLICATION SECURITY MODELS & VIRTUAL PRIVATE DATABASES

12 hours

Database Application Security Models: Types of Users, Security Models, Application Types, Data Encryption - Virtual Private Databases (VPD): Overview of VPD, Implementation using Views and Application Context (Oracle), Row/Column-Level Security in SQL Server.

UNIT IV: AUDITING DATABASE ACTIVITIES

12 hours

Auditing Tools and Methods: Oracle Auditing: Creating DDL Triggers, Auditing Database/Server Activity, SQL Server 2000 Auditing, Case Study: Security and Auditing Project.

UNIT V: PRIVACY-PRESERVING DATA MINING TECHNIQUES

12 hours

Introduction to Privacy-Preserving Data Mining (PPDM) Algorithms, Randomization Methods, Group-Based Anonymization, Distributed Privacy-Preserving Data Mining, Challenges: Curse of Dimensionality, Applications of PPDM.

Total : 60 hours

DIGITAL IMAGE PROCESSING

UNIT I: Digital Image Fundamentals & Image Transforms

12 hours

Digital Image Fundamentals: Sampling and quantization, Relationship between pixels **Image Transforms:** 2-D FFT and its properties, Walsh transform, Hadamard transform, Discrete Cosine Transform (DCT), Discrete Wavelet Transform (DWT).

UNIT II: Image Enhancement

12 hours

Spatial Domain Techniques: Point operations (types, gray-level transformations), Histogram manipulation, Local/neighborhood operations (median filter), Spatial domain high-pass filtering - **Frequency Domain Techniques:** Filtering in the frequency domain, Deriving frequency domain filters from spatial filters, Direct generation of frequency domain filters, Low-pass (smoothing) and high-pass (sharpening) filters.

UNIT III: Image Restoration

12 hours

Degradation models, Algebraic restoration approaches, Inverse filtering, Least Mean Square (LMS) filters, Constrained Least Squares Restoration.

UNIT IV: Image Segmentation & Morphological Processing

12 hours

Image Segmentation: Detection of discontinuities, Edge linking and boundary detection, Thresholding, Region-oriented segmentation - **Morphological Image Processing:** Dilation and erosion, Structuring element decomposition, Combining dilation and erosion (opening, closing), Hit-or-Miss transformation

UNIT V: Image Compression

12 hours

Redundancies and their removal methods, Fidelity criteria, Image compression models, Huffman and arithmetic coding, Error-free compression, Lossy compression, Lossy and Lossless Predictive Coding, Transform Based Compression, JPEG 2000 Standards.

| | Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- To learn the fundamentals of sensation, perception, and perceptual training.
- To have the scientific, technical, and engineering aspects of augmented and virtual reality systems.
- To learn the Evaluation of virtual reality from the lens of design.
- To learn the technology of augmented reality and implement it to have practical knowledge.

COURSE OUTCOMES (Cos)

At the end of the Course the student will be able to

| | |
|------------|---|
| CO1 | Describe the concept of virtual reality and Communication Media. (L2) |
| CO2 | Understand current virtual reality hardware and software. (L2) |
| CO3 | Understand various modeling approaches. (L2) |
| CO4 | Illustrate the concepts of Human Factors and Applications of VR. (L2) |
| CO5 | Build a Virtual Reality Application. (L3) |

AUGMENTED REALITY & VIRTUAL REALITY

UNIT I: INTRODUCTION

12 hours

Introduction to Virtual Reality (VR) and Augmented Reality (AR): Definitions, , Benefits of VR, Components of VR Systems, Introduction to AR and AR Technologies, Input Devices: 3D Position Trackers, Types of Trackers, Navigation and Manipulation Interfaces, Gesture Interfaces, Gesture Input Devices, Output Devices: Graphics Displays (Personal/Large Volume), Human Visual/Auditory Systems, Sound Displays.

UNIT II: VR MODELING

12 hours

Geometric Modeling: Virtual Object Shape, Visual Appearance, Kinematics Modeling: Transformation Matrices, Object Position, Invariants, Hierarchies, Viewing the 3D World, Physical Modeling: Collision Detection, Surface Deformation, Force Computation/Smoothing/Mapping, Behavior Modeling and Model Management.

UNIT III: VR PROGRAMMING

12hours

VR Programming Tools: Toolkits, Scene Graphs, World ToolKit vs. Java 3D (Comparison).

UNIT IV: APPLICATIONS

12 hours

Human Factors: Methodology, Terminology, Health/Safety, Societal Impact, Medical, Military, Manufacturing, Robotics, Business, Education, Entertainment Applications, Emerging Applications and Information Visualization.

UNIT V: AUGMENTED REALITY

12 hours

Introduction to AR, Computer Vision for AR, Interaction, Modeling, Annotation, Navigation, Wearable Devices.

Total : 60 hours

TEXT BOOKS:

1. Charles Palmer, John Williamson, “Virtual Reality Blueprints: Create compelling VR experiences for mobile”, Packt Publisher, 2018
2. Dieter Schmalstieg, Tobias Hollerer, “Augmented Reality: Principles & Practice”, Addison Wesley, 2016

| | | 4 | 1 | 0 | 5 | TY |
| | Prerequisite: Be well versed in concepts such as cryptography, consensus, hash functions, distributed ledgers, smart contracts And any other concepts integral to understanding block chain's inner workings. Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- To assess blockchain applications in a structured manner
- To impart knowledge in blockchain techniques and able to present the concepts clearly and structured.
- To get familiarity with future currencies and to create own cryptotoken.

COURSEOUTCOMES(Cos)

Students completing this course were able to

| | |
|------------|--|
| CO1 | Understand the various technologies and its business use. |
| CO2 | Analyse the blockchain applications in a structure manner. |
| CO3 | Explain the modern concepts of blockchain technology systematically. |
| CO4 | Handle the cryptocurrency. |
| CO5 | Understand the modern currencies and its market usage |

BLOCK CHAIN TECHNOLOGY

UNIT 1: INTRODUCTION

12 hours

Need for Distributed Record Keeping, Modeling faults and adversaries, Byzantine Generals problem, Consensus algorithms and their scalability problems, Nakamoto's concept with Blockchain based cryptocurrency, Technologies Borrowed in Blockchain – hash pointers, consensus, byzantine fault-tolerant distributed computing, digital cash etc.

UNIT 2: BASIC DISTRIBUTED COMPUTING & CRYPTO PRIMITIVES

12 hours

Atomic Broadcast, Consensus, Byzantine Models of fault tolerance, Hash functions, Puzzle friendly Hash, Collision resistant hash, digital signatures, public key crypto, verifiable random functions, Zero-knowledge systems

UNIT 3: BITCOIN BASICS

12 hours

Bitcoin blockchain, Challenges and solutions, proof of work, Proof of stake, alternatives to Bitcoin consensus, Bitcoin scripting language and their use

UNIT 4: ETHEREUM BASICS

12 hours

Ethereum and Smart Contracts, The Turing Completeness of Smart Contract Languages and verification challenges, Using smart contracts to enforce legal contracts, comparing Bitcoin scripting vs. Ethereum Smart Contracts, Writing smart contracts using Solidity & JavaScript

UNIT 5: PRIVACY, SECURITY ISSUES IN BLOCKCHAIN

12 hours

Pseudo-anonymity vs. anonymity, Zcash and Zk-SNARKS for anonymity preservation, attacks on Blockchains: Sybil attacks, selfish mining, 51% attacks advent of algorand; Sharding based consensus algorithms to prevent these attacks

Total : 60 hours

| | Prerequisite: Basic statistics, probability, linear algebra, calculus, and familiarity with regression analysis and stochastic processes | | | | | |
| | Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- To understand the basic concepts of time series analysis
- To understand the elementary time series models and model evaluation techniques.
- To understand the integration process of non-stationary data set.
- To understand the importance of ARMA and ARIMA models for forecasting.

COURSE OUTCOMES (Cos)

Understand the different elementary models related to time series analysis

| | |
|------------|--|
| CO1 | Apply different model evaluation technique to identify better model to forecast. |
| CO2 | Understand the importance of stationarity in building time series models. |
| CO3 | Understand the use of Granger Causality and Johansen Cointegration method. |
| CO4 | Apply VAR model to the dynamic behaviour of financial time series conditions. Select the order of Vector Auto Regression model for better forecast of time series data |
| CO5 | Build the model using ARCH and GARCH technique for non-constant variance data |

TIME SERIES ANALYSIS

UNIT 1: INTRODUCTION TO TREND

9 hours

Introduction to times series data, application of time series from various fields, Components of a time series, Decomposition of time series. **Trend:** Estimation of trend by free hand curve method, method of semi averages, fitting a various mathematical curve, and growth curves.

UNIT 2: TREND AND SEASONAL COMPONENT

12 hours

Method of moving averages. Detrending. Effect of elimination of trend on other components of the time series. **Seasonal Component:** Estimation of seasonal component by Method of simple averages, Ratio to Trend, Ratio to moving average and Link relatives.

UNIT 3: FORECASTING

12 hours

Variate component method: Stationary Time series: Weak stationary, autocorrelation function and correlogram of moving average. **Forecasting:** Exponential smoothing methods, Short term forecasting methods: Brown's discounted regression, Box-Jenkins Method.

UNIT 4: CYCLIC COMPONENT

12 hours

Deseasonalization . Cyclic Component: Harmonic Analysis. **Some Special Processes:** Moving-average (MA) process and Autoregressive (AR) process of orders one and two, Estimation of the parameters of AR (1) and AR (2) – Yule-Walker equations.

DEEP LEARNING WITH PYTHON

UNIT I: INTRODUCTION TO NEURAL NETWORKS

9 hours

AI, ML, DL – Definitions, Differences, Neurons, Neural Networks, Applications, Perceptron – Structure, Learning Algorithm, Limitations, Multi-Layer Perceptrons (MLP), Activation Functions (Sigmoid, ReLU, Tanh, Softmax), Backpropagation Algorithm.

UNIT II: DEEP LEARNING WITH PYTHON LIBRARIES

12 hours

Python Overview, NumPy – Arrays, Operations, Pandas – DataFrames, Manipulation, TensorFlow, PyTorch – Installation, Setup, Simple Neural Networks, Keras.

UNIT III: CONVOLUTIONAL NEURAL NETWORKS (CNNs) & RECURRENT NEURAL NETWORKS (RNNs)

12 hours

CNN – Architecture, Convolutional Layers, Pooling Layers, Fully Connected Layers, Activation Functions, Image Recognition, Computer Vision.
RNN – Structure, Working, LSTM, GRU, Sequential Data, NLP, Time Series Prediction.

UNIT IV: TRAINING AND OPTIMIZING DEEP LEARNING MODELS

12 hours

Gradient Descent– Batch, Stochastic, Mini-Batch, Adam, RMSprop, Adagrad.
Regularization– Dropout, L1, L2, Batch Normalization.
Hyperparameter Tuning – Learning Rate Scheduling, Model Evaluation – Confusion Matrix, Accuracy, Precision, Recall, F1-Score.

| CBCA25E23 | THINKING RESTFUL SERVICES | L | T | P | C | Ty/Lb/IE |
| | | 3 | 0 | 4 | 5 | ETL |
| | Prerequisite: Java Programming Fundamentals, Object-Oriented Programming Concepts, Advanced Java Concepts, Working with Spring Boot | | | | | |
| | Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- Learn to develop RESTful APIs using Spring Boot, including HTTP methods and JSON handling.
- Understand NoSQL concepts and perform CRUD operations with MongoDB via Spring Data.
- Implement robust exception handling and apply unit and integration testing strategies.
- Secure RESTful services using Spring Security with JWT-based authentication.
- Build and deploy a complete, secure REST API project integrating all core concepts.

COURSE OUTCOMES(Cos)

Understand the different elementary models related to time series analysis

| | |
|-----|---|
| CO1 | Build and test RESTful APIs using Spring Boot for effective backend communication. |
| CO2 | Managesemi-structured and unstructured data using NoSQL databases like MongoDB. |
| CO3 | Implement Spring Data Mongo Repositories to perform CRUD operations and interact with NoSQL databases. |
| CO4 | Handle exceptions gracefully in RESTful services using Spring's exception handling features And domain-specific exceptions. |
| CO5 | Perform unit and integration testing on service, data, and controller layers using JUnit andMockito. |

THINKING RESTFUL SERVICES

UNIT1: RESTful API Development and Data Handling:

9 hours

Introduction to REST Architecture, Building RESTful APIs with Spring Boot, HTTP Methods and Status Codes, RESTful URL Design Principles, Request and Response Handling (JSON), Creating REST Controllers. Introduction to NoSQL and MongoDB, Document-oriented Storage Concepts, Spring Data MongoDB Configuration, Creating Mongo Repositories, CRUD Operations with Mongo Repository, Managing Semi-structured and Unstructured Data

UNIT 2 : Exception Handling and Testing Strategies

12 hours

Spring Boot Exception Handling, Global Exception Handling with @ControllerAdvice, Domain-Specific Exceptions, Unit Testing with JUnit and Mockito, Testing Controller, Service, and Repository Layers, Integration Testing in Spring Boot

UNIT3 : Securing RESTful Applications

12 hours

Introduction to Spring Security, JWT Authentication Flow, Generating and Validating JWT Tokens, Securing End Points with JWT, Stateless Authentication Best Practices.

UNIT4 : Project and Summative Assessment

12 hours

Build a secure, tested RESTful API with MongoDB, implement authentication with JWT, and deploy the solution. Summative Quiz.

Total : 45 hours

CBCA25E23

THINKING RESTFUL SERVICES

List of Lab programs:

1. Create a Spring Boot RESTful API that handles CRUD operations for a Product entity using standard HTTP methods.
2. Design RESTful URLs and test endpoints using Postman for an e-commerce backend.
3. Connect a Spring Boot application to MongoDB, create a document model (e.g., Customer), and perform CRUD operations using Mongo Repository.
4. Store and retrieve semi-structured data (like JSON with nested fields) in MongoDB and expose it via REST endpoints.
5. Handle invalid inputs or missing data using @ExceptionHandler and @ControllerAdvice in a Spring Boot service.
6. Define and use domain-specific exceptions for better API error reporting (e.g., UserNotFoundException, InvalidOrderException).
7. Write unit tests for a service class using JUnit and mock dependencies with Mockito.
8. Test controller endpoints using @WebMvcTest and simulate HTTP requests using MockMvc.
9. Perform integration testing of the entire API workflow—from controller to repository.
10. Implement user authentication using Spring Security and JWT token generation on login.
11. Secure certain API endpoints with JWT and allow public access to others (e.g., login, registration).
12. Validate JWT tokens in request headers and extract user information to personalize responses.
13. Use Maven commands to build and package your Spring Boot application into a deployable .jar.
14. Log requests and responses for a Spring Boot application using slf4j and @Slf4j annotations.
15. Create a backend service for a To Do List or Task Manager with secure login, MongoDB data persistence, and full test coverage.
16. Handle large nested JSON structures and store them efficiently in MongoDB using embedded documents.
17. Add pagination and sorting to your Mongo repository methods and expose them through API.
18. Simulate a login workflow using Postman with JWT token generation and secured data access.
19. Deploy the RESTful application locally or on a cloud platform (optional stretch goal).
20. Document the API using Swagger/OpenAPI (bonus practice for project-ready API design).

12 Hours

Fundamentals of Neural Networks-Introduction to Neural Networks Layers- Multi-Layer Perceptrons (MLPs)- Training and Optimization of Neural Networks - Advanced Neural Network Architectures-Neural Network Applications

UNIT III – Training a Neural Network

12 Hours

Introduction to Forward and Backpropagation - Optimization Techniques-Activation and Loss Functions- Regularization and Generalization-Hyperparameter Tuning and Model Evaluation- Advanced Training Techniques

UNIT IV – Deep Learning Algorithms (CNN, RNN, and LSTM)

12 Hours

Introduction to TensorFlow - Building Neural Networks with TensorFlow and Keras - Convolutional Neural Networks (CNNs) for Image Processing - Recurrent Neural Networks (RNNs) and Sequence Models- Deploying and Scaling Deep Learning Models using IBM Watson Service

Total : 45 hours

DEEP LEARNING WITH WATSON

List of Lab Programs:

1. Implement a simple neural network with one hidden layer using NumPy (without deep learning libraries). Train it on a small dataset.
2. Construct a Multi-Layer Perceptron (MLP) using TensorFlow/Keras for classifying handwritten digits (use MNIST dataset).
3. Compare different activation functions (ReLU, Sigmoid, Tanh) in a neural network and analyze their effect on training.
4. Build an advanced neural network (such as an autoencoder) using Keras and analyze its performance on image reconstruction.
5. Implement forward and backpropagation from scratch for a simple feedforward network and visualize the weight updates.
6. Train a neural network with different loss functions (MSE, Cross-Entropy) and evaluate their impact on model accuracy.
7. Tune hyperparameters (learning rate, batch size, number of layers) using GridSearchCV or Random Search and evaluate results.
8. Train a Convolutional Neural Network (CNN) on the CIFAR-10 dataset and evaluate its performance.
9. Implement data augmentation techniques (rotation, flipping, scaling) and observe their impact on CNN performance.
10. Build a Recurrent Neural Network (RNN) for text classification or sentiment analysis using TensorFlow/Keras.
11. Train an LSTM model on a time-series dataset (such as stock price prediction) and analyze its forecasting accuracy.
12. Deploy a trained deep learning model using IBM Watson Service, make predictions using a cloud-based API, and integrate the results into a Flask application.
13. A research team wants to generate artificial handwritten digits to expand their dataset for training better digit classifiers.
14. Spam Email Classifier: A company wants to filter spam emails. Build a simple neural network using NumPy (without TensorFlow/Keras) to classify emails as spam or not.
15. Self-Driving Car Image Recognition: Train a Convolutional Neural Network (CNN) on the CIFAR-10 dataset to classify road signs.

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

CBCA25E25

BUILDING APPLICATIONS USING LLM –L1

UNIT1: Introduction to Chat bots and Virtual Assistants:

9 hours

Types of Chatbots, UseCases of Virtual Assistants, Overview of Conversational AI, Architecture of Chatbot Systems, Components of Virtual Assistant, Overview of NLP in Chatbot Development.

Setting up the Development Environment: Installing Python, Python Libraries, Configuration of Python Environment, Introduction to LLM APIs, Cloud Platforms for LLM Integration.

Integrating LLMs with Python: Introduction to LLMs, Accessing LLM APIs, Python Libraries for Chatbot Development, Simple Chatbot API Integration.

UNIT2 : Designing Functional Chatbots

12 hours

Basic FAQ Chatbot, Intent Recognition, Entity Extraction, Conversational Flow, Context Management, Dynamic Responses.

Advanced Features in Chatbot Development: Response Generation Techniques, Handling Ambiguity, Multi-turn Conversations, Intent Classification, Data Labelling for Chatbots, Machine Learning for Chatbots.

Integrating External Data Sources: Connecting to APIs, Integrating Databases, Querying Data, Handling API Responses.

UNIT3: Deploying Chatbots

12 hours

Chatbot Deployment, Web Application Integration, Messaging Platform Integration, Webhooks, Real-time Communication, Chatbot Testing, Debugging.

Performance Optimization and Error Handling: Troubleshooting, Debugging, Performance Optimization, Load Balancing, Optimizing API Calls, Handling Unexpected Inputs.

UNIT4 : Project and Summative Assessment

12 hours

Project Planning and Design, Solution Development, Testing and Debugging, Review and Refactoring, Project Documentation and Presentation, Summative Quiz.

Total : 45 hours

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

CBCA25E25

BUILDING APPLICATIONS USING LLM –L1

List of Lab programs:

1. Build a Basic FAQ Chatbot: Design and implement a simple FAQ-based chatbot that can answer predefined questions related to a company's services using Python and LLM APIs.
2. Intent Recognition: Create a chatbot capable of recognizing user intent by classifying input into specific categories (e.g., booking, inquiries, complaints) using NLP techniques.
3. Context Management in Chatbots: Implement context management in a chatbot to maintain the state of the conversation across multiple user interactions, ensuring a personalized user experience.
4. Dynamic Response Generation: Build a chatbot that can generate dynamic responses based on user input, utilizing LLMs for natural language processing and understanding.
5. Integrating External Data Sources: Integrate the chatbot with an external API (e.g., weather, product catalog, customer database) to fetch real-time data and provide dynamic responses based on external inputs.
6. Database Integration for Chatbots: Implement a chatbot that interacts with a database to retrieve user-specific information or provide personalized responses based on stored data.
7. Handling Ambiguity in Conversations: Design a chatbot capable of handling ambiguous user input by asking clarifying questions and refining responses based on the user's feedback.
8. Integrating a Chatbot with a Messaging Platform: Build a chatbot that can be deployed on a messaging platform (e.g., WhatsApp, Facebook Messenger), enabling it to interact with users in real time.
9. Testing and Debugging Chatbots: Develop a chatbot and perform rigorous testing to identify and fix issues, ensuring that the bot handles unexpected inputs and edge cases gracefully.
10. Deploying Chatbot on a Web Application: Design and deploy a functional chatbot within a web application, integrating it into an existing website and providing a seamless user experience.
11. Designing an E-commerce Assistant Chatbot: Build a chatbot that acts as an e-commerce assistant, helping users search for products, add them to the cart, and assist with checkout.
12. Handling Unstructured Data with LLMs: Create a chatbot that processes unstructured data, like customer feedback, and provides actionable insights through text analysis using LLMs.

|-----------|---|----------|----------|----------|----------|-----------------|
| CBCA25E26 | BUILDING APPLICATIONS USING LLM-L2 | L | T | P | C | Ty/Lb/IE |
| | | 3 | 0 | 4 | 5 | ETL |
| | Prerequisite: DigitalTools,GenAI,Database,Program ming,Problem-solvingandPythonskills. | | | | | |

OBJECTIVES

1. Learn about different AI agents (autonomous, task-based, static/dynamic) and their system architectures.
2. Design agent behaviors, manage states, schedule tasks, and implement event-driven programming.
3. Connect agents to APIs, databases, and external services for real-time data interaction.
4. Coordinate multiple agents, manage communication, resolve conflicts, and share workflows.
5. Improve system performance, scalability, handle errors, and debug multi-agent environments efficiently.

COURSE OUTCOMES (Cos)

Understand the different elementary models related to time series analysis

| | |
|------------|--|
| CO1 | Develop independent AI agents capable of performing dynamic, task-based actions. |
| CO2 | Build multi-agent systems that collaborate and interact effectively in shared workflows. |
| CO3 | Integrate agents with external systems such as databases, APIs, and third-party services. |
| CO4 | Implement advanced LLM capabilities, including tool use, knowledge retrieval, and decision-making. |
| CO5 | Optimize agent workflows for efficiency, scalability, and error handling. |

BUILDING APPLICATIONS USING LLM-L2

UNIT 1: Introduction to AI Agents

9 hours

Types of AI Agents, Autonomous Agents, Task-Based Actions, Static vs Dynamic Agents, Agent Architectures, Multi-Agent Systems.

Building Independent AI Agents: Single-Agent System, Agent Behavior Design, Actionable Tasks, Task Scheduling, State Management, Event-Driven Programming.

Interacting with External Systems: Connecting to APIs, Database Integration, Querying External Databases, Integrating External Services, Webhooks, REST APIs for Agents.

UNIT 2: Advanced LLM Capabilities

12 hours

Tool Use in LLMs, Knowledge Retrieval Mechanisms, Decision-Making Models, Reasoning with LLMs, Task-Oriented LLM Applications.

Multi-Agent System Design: Collaborative Agents, Shared Workflow, Agent Coordination, Agent Communication Protocols, Conflict Resolution, Synchronization of Agents.

Agent Task Management: Task Decomposition, Prioritizing Tasks, Task Assignment, Resource Allocation, Task Completion Feedback, Real-time Monitoring.

UNIT 3: Optimization Techniques

12 hours

Performance Tuning, Workflow Optimization, Scalability of Agent Systems, Load Balancing, Parallel Processing for Agents.

Error Handling and Debugging: Error Types in Multi-Agent Systems, Exception Handling, Debugging Tools, Log Management, Traceback Analysis.

UNIT 4: Project and Summative Assessment

12 hours

Project Planning and Design, Solution Development, Testing and Debugging, Review and Refactoring, Project Documentation and Presentation, Summative Quiz

Total : 45 hours

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

CBCA25E26

BUILDING APPLICATIONS USING LLM-L2

List of Lab programs:

1. Develop a single-agent system that autonomously performs a simple task (e.g., scheduling a meeting) based on specific triggers. Ensure the agent's actions are stateful and respond to dynamic inputs.
 2. Create an agent that listens for specific events (e.g., new data entry in a database) and performs actions accordingly, such as sending an alert or triggering a task.
 3. Design an agent that can query a database (e.g., SQL or NoSQL) for specific records based on dynamic input and process the results to perform a task, like generating a report.
 4. Develop a multi-agent system where agents communicate with each other to complete a collaborative task (e.g., scheduling resources in a project management tool).
 5. Implement an AI agent that uses an LLM to retrieve and process relevant knowledge from a knowledge base (e.g., FAQs or documents) to answer user queries.
 6. Create a decision-making model for an agent that makes dynamic, context-dependent decisions (e.g., route optimization for deliveries based on traffic data).
 7. Develop two or more agents that must resolve conflicts (e.g., resource allocation) when trying to complete tasks in a shared workflow, using predefined rules or negotiation protocols.
 8. Integrate a third-party service (e.g., payment gateway) into an agent system using webhooks, triggering events based on external service responses and automating subsequent actions.
 9. Build an LLM-powered application where the agent assists with a task such as customer support, booking appointments, or generating reports based on user input.
 10. Implement a real-time monitoring system that tracks agent progress on assigned tasks, provides feedback on task completion, and updates task statuses.
 11. Optimize an AI agent's performance by tuning various parameters (e.g., response time, Resource usage) for an existing workflow to ensure it works efficiently under load.
- Design a multi-agent system and implement advanced debugging tools to trace issues, handle errors, and ensure smooth operation with minimal downtime.

|-----------|--|---|---|---|---|----------|
| | | 2 | 0 | 0 | 2 | IE |
| | Prerequisite: A basic understanding of Indian history, culture, and philosophical thought is essential. Course Designed by: Faculty of Computer Applications | | | | | |

OBJECTIVES

- **To introduce students to the richness and diversity of Indian Knowledge Systems**, including philosophy, science, mathematics, medicine, architecture, arts, language, and literature.
- **To promote interdisciplinary understanding** by integrating traditional knowledge with contemporary academic disciplines.
- To develop a critical appreciation for India's contributions to global knowledge and civilization.
- To encourage research and innovation through the application of traditional Indian knowledge in modern contexts.

COURSE OUTCOMES (Cos)

Understand the different elementary models related to time series analysis

| | |
|------------|---|
| CO1 | Understand the foundational concepts, history, and evolution of Indian Knowledge Systems across diverse domains such as philosophy, science, arts, and governance. |
| CO2 | Analyze the contributions of ancient Indian scholars in fields like mathematics, astronomy, medicine (Ayurveda), linguistics, and architecture. |
| CO3 | Appreciate the interconnection between traditional Indian knowledge and modern scientific principles. |
| CO4 | Apply insights from Indian ethical, ecological, and educational traditions to contemporary global challenges. |
| CO5 | Demonstrate awareness of the relevance and application of IKS in modern-day disciplines such as sustainable development, holistic health, and integrative learning. |

IKS-I: Indian Knowledge Systems and Traditions

Course Objectives:

- To sensitize the students about context in which they are embedded i.e. Indian culture and civilisation including its Knowledge System and Tradition.
- To help students to understand the knowledge, art and creative practices, skills and values in ancient Indian system.
- To help to study the enriched scientific Indian heritage.
- To introduce the contribution from Ancient Indian system & tradition to modern science & Technology.

Detailed Contents:

Module 1: Introduction to IKS

15 hours

(Any eight of total sessions assigned for Literary activity)

Introductory lecture on the any eight topics below:

1. Indian Knowledge System
2. Indian Culture & Civilization
3. Ancient Indian Chemistry
4. Ancient Indian Metallurgy
5. Ancient Indian Mathematics
6. Ancient Indian Astronomy
7. Indian Astronomical Instruments
8. Indian Knowledge System (Upveda: Ayurveda)
9. Indian Knowledge System (Upveda: Gandharveda)
10. Indian Knowledge System (Vedangas: Shiksha, Kalpa, Vyakarana)
11. Indian Knowledge System (Vedangas: Jyotisha, Nirukta, Chandas)
12. Indian Architecture I: Sthapatya-Veda
13. Indian Architecture II: Temples
14. Indian Architecture III: Town & Planning
15. Indian Philosophical System

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

Module 2: Introduction to Creative Practices

15 hours

(Twenty Lectures with at least Five different topics of total session under Creative activity)

Introductory lecture on the topics below:

1. Dhatuvada: art of metallurgy
2. Akara jnana: art of mineralogy
3. Vastuvidya: art of engineering
4. Yantmatratika: art of mechanics
5. Takshana: art of carpentry
6. Chalitakayooga: art of practicing as a builder of shrines
7. Rajjuvidya: art of testing silver and jewels
8. Maniraga jnana: art of tinging jewels
9. Sucivayakarma: art of needleworks and weaving
10. Vadya vidya: art of playing on musical instruments
11. Geet vidya: art of singing
12. Nritya vidya: art of dancing
13. Natya vidya: art of theatricals
14. Alekhya vidya: art of painting
15. Viseshakacchedaya vidya: art of painting the face and body with color
16. Udakavadya: art of playing on music in water
17. Manasi kavyakriya: art of composing verse
18. Bhushanayojana: art of applying or setting ornaments
19. Citrasakapupabhaksya vikarakriya: art of preparing varieties of delicious food
20. Dasanavasanapanganraga: art of applying preparations for cleansing the teeth, cloths and painting the body
21. Utsadana: art of healing or cleaning a person with perfumes
22. Vastragopana: art of concealment of cloths
23. Balakakridanaka: art of using children's toys
24. Tandulakusalibali: art of preparing offerings from rice and flowers
25. Pushpastaranam: art of making a covering of flowers for a bed

Total : 30 hours

IKS-II: Indian Culture and Civilization

Course Objectives:

- To introduce fundamentals of Ancient Indian Education to understand the pattern and purpose of studying vedas, vedangas, upangas, upveda, purana & Itihasa.
- To help students to trace, identify and develop the ancient knowledge systems.
- To help to understand the apparently rational, verifiable and universal solution from ancient Indian knowledge system for the holistic development of physical, mental and spiritual wellbeing.
- To build in the learners a deep rooted pride in Indian knowledge, committed to universal human right, well-being and sustainable development.

Detailed Contents:

Module 1: Introduction to IKS

6 hours

Caturdaśa Vidyāsthānam, 64 Kalas, Shilpa Śāstra, Four Vedas, Vedānga, Indian Philosophical Systems, Vedic Schools of Philosophy (Sāṃkhya and Yoga, Nyaya and Vaiśeṣika, Pūrva-Mīmāṃsā and Vedānta), Non-Vedic schools of Philosophical Systems (Cārvāka, Buddhist, Jain), Puranas (Maha-puranas, Upa-Puranas and Sthala-Puranas), Itihasa (Ramayana, Mahabharata), Nīti Sastras, Subhasitas

Module 2: Foundation concept for Science & Technology

6 hours

Linguistics & Phonetics in Sanskrit (panini's), Computational concepts in Astadhyayi Importance of Verbs, Role of Sanskrit in Natural Language Processing, Number System and Units of Measurement, concept of zero and its importance, Large numbers & their representation, Place Value of Numerals, Decimal System, Measurements for time, distance and weight, Unique approaches to represent numbers (Bhuta Samkhya System, Kaṭapayādi System), Pingala and the Binary system, Knowledge Pyramid, Prameya – A Vaiśeṣikan approach to physical reality, constituents of the physical reality, Pramāṇa, Saṃśaya

Module 3: Indian Mathematics & Astronomy in IKS

6 hours

Indian Mathematics, Great Mathematicians and their contributions, Arithmetic Operations, Geometry (Sulba Sutras, Aryabhatīya-bhasya), value of π , Trigonometry, Algebra, Chandah Sastra of Pingala,

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Indian Astronomy, celestial coordinate system, Elements of the Indian Calendar Aryabhatiya and the Siddhantic Tradition Pancanga – The Indian Calendar System Astronomical Instruments (Yantras) Jantar Mantar or Raja Jai Singh Sawal

Module 4: Indian Science & Technology in IKS

6 hours

Indian S & T Heritage, sixty-four art forms and occupational skills (64 Kalas)
Metals and Metalworking technology (Copper, Gold, Zinc, Mercury, Lead and Silver), Iron & Steel, Dyes and Painting Technology, Town & Planning Architecture in India, Temple Architecture, Vastu Sastra

Module 5: Humanities & Social Sciences in IKS

6 hours

Health, Wellness & Psychology, Ayurveda Sleep and Food, Role of water in wellbeing Yoga way of life
Indian approach to Psychology, the Triguna System
Body-Mind-Intellect- Consciousness Complex. Governance, Public Administration & Management
reference to ramayana, Artha Sastra, Kautilyan State.

IKS-III: Indian Vision for Human Society (Vishwa Kalyan thru Vasudhaiva Kutumbakam)

Course Objectives

- To help the learner to understand the concept of “vasudhaiva kutumbakam” and its realization process as an base for the development of vision for a humane society.
- To help to identify the universality in humans and its coexistence in existence To introduce the sense of responsibility, duties and participation of individual for establishment of fearless society.
- To help to understand the apparently rational, verifiable and universal solution from ancient Indian knowledge system for the holistic development of physical, mental and spiritual wellbeing of one and all, at the level of individual, society, nation and ultimately the whole world.

Detailed contents:

Module 1: The world view & Vision of Human Society

6 hours

The concept of non-duality of Prakriti (Jad) and Purush (Chetana), human as coexistence of Jad & Chetan, pancha-mahabhutas, the root of sorrow and suffering, freedom from sorrow, salvation, eternal peace truth (vyaharika satya), ultimate truth. The acceptance of various systems of philosophy for realization of truth and complementariness in society in ancient Indian system.

Module 2: Aspiration and Purpose of Individual and Human Society

6 hours

Aims of Human life; at individual level and societal level. At societal level; Four purusarthas Dharma, Artha, Kama, Moksha. Individual level; Abhyudaya (progress),

Nihsreyasa (perfection) Pravrtti, Nivrtti. Dharma; Dharma sutras (Gautama, apastamba, baudhayana, vasistha). Dharma-Shastra; (manusmriti, naradamriti, visnusmrti, yajnavalkya smriti) sociology, different stages of life like studenthood, householdership, retirement and renunciation, rites and duties, judicial matters, and personal laws (Aachara, Vyavahara, Prayaschitta). Artha; Kautilya Arthashastra, Kamandakiya Nitisaara, Brihaspati Sutra, Sukra Niti, Moksha: Human liberation (Ignorance to Knowledge)

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

Module 3: Program for Ensuring Human Purpose: at Individual and Societal level –I

6 hours

Fundamental concept of Nitishastra: Satyanishtha Aur Abhiruchi (Ethics, Integrity & aptitude), The true nature of self; Shiksha Valli, Bhriгу Valli (concept of Atman-Brahman (self, soul). The true constitution of Human: Ananda Valli (Annamaya Kosha, Pranamaya Kosha, Manomaya Kosha, Vijnanamaya Kosha, Anandamaya Kosha), The four states of consciousness (Waking state, Dreaming state, Deep Sleep State, Turiya the fourth state), Consciousness (seven limbs and nineteen mouths), Prajna, Awareness. The Life Force Prana (Praana-Apaana-Vyaana-Udaana- Samaana)

Module 4: Program for Ensuring Human Purpose: at Individual and Societal level –II

6 hours

Differentiating Vidya and Avidya, human bondages, Higher and Lower Knowledge (Para Vidhya & Apra Vidhya), Concept of Sattva, Rajas, Tamas and need of balancing the same, Patanjali yog sutra; Yama, Niyama, Asanas, pranayams, pratyahara, dharna, dhyana, Samadhi, Sixteen category of padartha, pramans (pratyaksh, anumana, upamana, shabda). Saadhana chatushtayama (viveka, vairagya, mumukshatavam, shadsampatti (sama, dama, uparama, titiksha, shradha, samadhana), Understanding Nitya Karma, Naimittika Karma, Kamya karma, prayaschitta karma, Nishidha Karma.

Meditation and Progressive meditation (Narada's education), Ativadin to self-knowledge, Jyan yog, Karma yog, sanyas yog in aspect to harmonious practice in society

Module 5: Practices for Ensuring Human Purpose – III

6 hours

Practice in philosophy, architecture, grammar, mathematics, astronomy, metrics, sociology, economy and polity, ethics, geography, logic, military science, weaponry, agriculture, mining, trade and commerce, metallurgy, shipbuilding, medicine, poetics, biology and veterinary science.

Total : 30 hours

IKS-IV: Indian Science, Engineering and Technology (Past, Present and Future)

Course Objectives

- To familiarize learners with major sequential development in Indian science, engineering and technology.
- To review & strengthen the ancient discovery and research in physics, chemistry, maths, metallurgy, astronomy, architecture, textile, transport, agriculture and Ayurveda etc.
- To help students to trace, identify and develop the ancient knowledge systems to make meaningful contribution to development of science today
- To help to understand the apparently rational, verifiable and universal solution from ancient Indian knowledge system for the scientific, technological and holistic development of physical, mental and spiritual wellbeing.

Detailed contents:

Module 1: Indian Traditional Knowledge; Science and Practices

6 hours

Introduction to the Science and way of doing science and research in India, Ancient Science in Intra & Inter Culture Dialogue & coevolution.

Traditional agricultural practices, Traditional water-harvesting practices, Traditional Livestock and veterinary Sciences, Traditional Houses & villages, Traditional Forecasting, Traditional Ayurveda & plant based medicine, Traditional writing Technology

Module 2: Ancient Indian Science (Physics, Chemistry, Maths)

6 hours

Physics in India: Vaisheshika darshan, Atomic theory & law of motion, theory of panchamahabhoota, Brihath Shathaka (divisions of the time, unit of distance), bhaskaracharya (theory of gravity, surya siddhanta & siddhanta shiromani), Lilavati (gurutvakashan Shakti).

Chemistry in India: Vatsyayana, Nagarjuna, Khanda, Al-Biruni, Vagbhata – building of the ras-shala (laboratory), working arrangements of ras-shala, material and equipment, Yāsodhara Bhaṭṭa - process of distillation, apparatus, saranasamskarita, saranataila.

Mathematics in India: Baudhayana's Sulbasutras, Aryabhata, Bhaskaracharya-I, Severus Sebokht, Syria, Brahmagupta, Bhaskaracharya-II, Jyeshthadeva

Module 3: Ancient Indian Science (metallurgy, Astronomy, Architecture)

6 hours

Metallurgy in India: Suvarṇa (gold) and its different types, prosperities, Rajata (silver), Tamra (copper), Loha (iron), Vanga (tin), Naga / sisa (lead), Pittala (brass)

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Astronomy in India

Vedang Jyotish, aryabhatta siddhanta, Mahabhasakriya, Laghubhaskariya, vatesvarasiddhanta, Sisyadhivrdhida, Grahashay, Goladhyaya, Karabakatuhala (Aryabhata, Varahamihira, Brahmagupta, Vatesvara, Bhaskara, Paramesvara, NilakanthaSomayaji, Jyeshtadeva, SankaraVarman)

Architecture in India:

Nagara (northern style), Vesara (mixed style), and Dravida (southern style), Indian vernacular architecture, Temple style, cave architecture, rock cut architecture, kalinga architecture, chandels architecture, rajput architecture, jain architecture, sikh architecture, Maratha architecture Indo-Islamic architectural, Indo-Saracenic revival architecture, Greco Buddhist style.

Module 4: Ancient Indian Science (Textile, Agriculture, Transport)

6 hours

Textile Technology in India:

Cotton (natural cellulose fiber), silk, wool (natural protein fibers), bast and leaf fibers, mridhuhatudhapitambaram (meaning a practice of fumigating the fabric with incense smoke before use as a part of the finishing process), sthadhautavasanyugma (bleached white—a finishing process); suchasth, sutradharana (needle and thread – tools for stitching); dyeing, washing spinning and weaving technology.

Agriculture in India:

krishisuktas, Krishiparashara, Brihatsamhita, Types of crops, Manures, Types of land- devamatraka, nadimatraka, use of animals in warfare, animal husbandry, Animals for medicines. Ancient transport in India

Module 5: Ancient Indian Science (Ayurveda & Yoga)

6 hours

Ayurveda for Life, Health and Well-being:

Introduction to Ayurveda: understanding Human body and Pancha maha bhuta, the communication between body & mind, health

regimen for wellbeing, introduction to yoga (raja yoga, astang yoga, gyan yoga), understanding of Indian psychological concept, consciousness, tridosha & triguna.

IKS-V: Indian Town Planning and Architecture

Course Objectives

- To develop the knowledge and analysis on the understanding of eco-friendly, robust and scientific planning and architecture system of ancient India.
- To understand the importance of functional, aesthetic, psychological, culture and socio religious concept of ancient India architecture.
- To help the learners to trace, identify and develop the approach, process and material used in town and planning, construction and architecture
- To review and analyse the importance and significance of visual and performing arts and design in temples, houses, forts, caves and community places.
- To understand the various eco-friendly technology accepted in ancient civilization

Detailed contents:

Module 1: The Introduction to ancient Architecture

6 hours

Introduction to relationship between Man, Nature, Culture and city forms. Study of determinants (Natural and man-made) influencing location, growth & pattern of human settlements including types of settlements growth (Organic and Planned) and settlement forms.

Architecture as satisfying human needs: functional, aesthetic and psychological outline of components and aspects of architectural form-site, structure, skin, materials, services, use, circulation, expression, character, experience.

Understanding of the causative forces - the cultures, history, socio religious practices and institution, political and economic conditions, issues of land, climate and technology, Historical and Primitive Architecture.

Module 2: Ancient Architecture as Expression of Art & Design

6 hours

Relationship between Art and Design with man, space and environment. Expression in Art and Architecture - concept of space, sense of enclosure- openness, robustness, dynamism, spatial geometry, Eco-friendliness.

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

Architecture through use of elements of visual arts such as point, line, plane, form, space, colour, texture, light, solids and voids, shadow and shade etc. Understanding of effect of scale, proportions, order, material effects such as textures, patterns, light, sound, temperature etc in architectural spaces.

Allied visual and performing arts and its relationship to build environments using colour theory, symbolism, glass painting, scriptural writing, clay moulding, stone carving.

Important Indian architecture as per elements space & form Form: specific geometry form (sphere, cube, pyramid, cylinder and cone and its sections as well as their derivatives) Space: build form space, open space, Internal and External space, Continuous spaces Centralized, Linear, Radial Clustered, Grid space Different type of Materials used for construction in Ancient Indian architecture.

Clay products: Classification of bricks, Fire Brick, Fly Ash Bricks, Tiles, Terra- cotta, Earthenware, Porcelain, Stoneware. **Stones:** Uses of Stones, Qualities of Good Building Stones, Dressing, Common Building Stones of India. **Glass:** Different Glass forms and their Suitability, **Timber:** Different Forms and their Suitability **Metals:** Ferrous & Nonferrous Metals and Alloys, and, their Suitability, limitations, precautions **Paints and Varnishes:** Different types and their Suitability, limitations, precautions

Module 3: Ancient Architecture Principle & Planning

6 hours

Design: Principles of designing - Composition of Plan. Inception and development of the early Hindu temple form with reference to Vedic and Buddhist planning principles and design elements; Development of regional styles and manifestations thereof; Evolution of temple complexes and temple towns;

Planning: Residence- site selection, site orientation- aspect, prospect, grouping, circulation, privacy, furniture requirements, services and other factors. Vastu shastra and its importance in building interrelationship with human, nature and cosmos

Town Planning: Town plans of Harappa, Mohenjodaro, Pataliputra, Delhi. Vastu shastra and its application in city layout.

Module 4: Ancient Architecture-I

6 hours

The settlement planning pattern, elements, associated forms, typical Vedic village, towns (Dandaka, Nandyavarttha etc.), typology of Shelters and civic buildings of ancient architecture in reference to following civilization: Indus Valley, Aryan/vedic Civilisation, Buddhist Architecture, Indo Aryan & Dravidian Architecture.

Role of Shilpasasthasras and Arthashasthra in settlement planning.

Important architecture: Great baths, Development of fortification, walled towns, structures developed eg: Stupas, Viharas, Chaityas, Stambhas, Toranas, sacred railing etc.

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

Study of worshipping places with especial reference to Indo Aryan / Nagara style & Dravidian style (Chola, Chalukya, Pallava, Satavahana, Hoysala, Vijayanagara etc.), design of shikharas & gopuram, rock-cut and structural examples of temples.

Module 5: Ancient Architecture-II

6 hours

Evolution of Hindu Temples in different period: Gupta, Aihole, Badami, Pattadakal, Mahabalipuram, Indo Aryan Style in Orrisa, Khajuraho, Gujarat, Rajasthan. Dravidian Style in Chola, Chalukyan, Pandya, Pallava, Hoysala Style, Revival of Hindu architecture of South India at Vijayanagara and Madurai

Tradition Indian villages & House: Regional house construction, interior & importance e.g. Rajasthani house, bhungas of kutch, nalukettu of kerala, Ikra of assam, manduva logili or illu of Andhra Pradesh, wadas of Maharashtra, Mud houses of Madhya Pradesh, kathkuni of himachal Pradesh, khanjaghara of orisa, Taq and dhajji diwari of Kashmir etc.

Scientific achievements though ancient architect: Jantar Mantar, Musical Pillars of Vitthal temple, Sundial of konark temple, construction of eight shiva temple in straight line from Kedarnath to rameshwaram at longitude 79°E 41'54, Veerbhadra temple with 70 hanging pillars, Ellora caves excavating the mountain, Jaipur plan pink city etc.

IKS-VI: Indian Mathematics and Astronomy

Course Objectives

- To provide information about great mathematicians and astronomers who given significant contribution in Indian mathematics and astronomy.
- To help students to trace, identify, practice and develop the significant Indian mathematic and astronomical knowledge.
- To help to understand the astronomic significance with the human holistic development of physical, mental and spiritual wellbeing
- Enumerate the main characteristics of education system in Vedic and post Vedic period to enrich the intellectual imagination and diminish the dogmatic assurance which closes the mind against speculation

Detailed contents:

Module 1: The Introduction to Ancient Mathematics & Astronomy

6 hours

Introduction to Brief introduction of inception of Mathematics & Astronomy from vedic periods. Details of different authors who has given mathematical & astronomical sutra (e.g. arytabhatta, bhaskara, brahmagupta, varamahira, budhyana, yajanvlkya, panini, pingala, bhara muni, sripati, mahaviracharya, madhava, Nilakantha somyaji, jyeshthadeva, bhaskara-II, shridhara)

Periodical enlisting of Mathematical & Astrological achievement in India. Evolution of Indian Numerals (Brahmi (1st century), Gupta (4th century) & Devanagri Script (11th century)

Module 2: Ancient Mathematics –I

6 hours

Veda & Sulvasutras (Pythagoras theorem, Square root & Squaring Circle) (baudhayana sulbhasutra, apastamba sulbhasutra, katyayana sulbhasutra, manava sulbhasutra, maitrayana sulbhasutra, varaha sulbhasutra, vadhula sulbhasutra, Pingala's chandrasutras, sunya, yaat-tavat, Aryabhatta (Aryabhatiya, Asanna, ardha-jya, kuttaka), bhaskara (trigonometry, shridhara, mahavira), Bhaskara Acharya (Sidantashiromani), Varamahira panchasiddhantika.

Module 3: Ancient Mathematics –II

6 hours

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus

Program Structure for BCA DT (Full Time)

Brahmagupta (vargaprakrati, bhramasphuta siddhanta, bhavana), ayatavrtta, ganitasarasamgraha, lilavathi, ganesadaivajna, randavantika, suryasiddhanta, grahalaghava, sadratnamala, mandavrtta, sighrartta, Bijaganita, Bakshali manuscript

Golavada, Madhyamanayanaprakara, Mahajyayanaprakara (Method of Computing Great Sines), Lagnaprakarana, Venvaroha, Sphutacandrapti, Aganita-grahacara, Chandravakyani (Table of Moon-mnemonics)

Module 4: Ancient Astronomy –I

6 hours

Parahita system of astronomy and drk system of astronomy, Manda samskara, sighra samskara.

Vedanga Jyotisha (astronomical calculations, calendrical studies, and establishes rules for empirical observation), Aryabhatiya (earth rotation, shining of moon), Brahmasphutasiddhanta (motion of planets), varahmihira (pancasiddhantika), Mahabhaskariya, lahubhaskariya & aryabhatiya bhashya (Planetary longitudes, heliacal rising and setting of the planets, conjunctions among the planets and stars, solar and lunar eclipses, and the phases of the moon), Sisyaadiveddhida (grahadhyaya, goladhyaya), siddantasiromani, karanakutuhala (planetary positions, conjunctions, eclipses, cosmography), siddantasekhara, yantra-kirnavali, Sphutanirnaya, Uparagakriyakrama.

Module 5: Ancient Astronomy –II

6 hours

Positional astronomy (sun, planets, moon, coordinate systems, precision of the equinox and its effects, eclipses, comets and meteors), Mahayuga & Kalpa system Yuga system, ayanas, months, tithis and seasons, time units, sun and moon's motion, planet position, ayanachalana, zero-precision year, katapayadi system, Indian nakshatra system, astronomy

Instruments for naked eye astronomy (vedic observatories), The principal and application of Samrat Yantra, Jai Prakash Yantra, Disha Yantra, Rama Yantra, Chakra Yantra, Rashiwalya Yantra, Dingash Yantra, Utaansh Yantra

Total : 30 hours

Yoga course is designed to provide students with a comprehensive understanding of physical fitness, wellness, and nutrition. This course explores the meaning and importance of yoga in the modern era, the role of sports in maintaining physical fitness, and the various components of physical wellness. Students will also learn about the significance of nutrition and weight management, equipping them with the knowledge to promote a healthy and balanced lifestyle. Through this course, students will gain insights into the holistic approach to health and well-being.

Unit-I

6 Hours

- o Yoga: Meaning and definition
- o Importance of yoga in 21st century
- o Introduction to Yogic Anatomy and Physiology
- o Yoga & sports, Yoga for healthy lifestyle
- o Types of Yoga: - Hatha yoga, laya yoga, mantra yoga,
- o bhakti yoga, karma yoga, jnana yoga, raj yoga
- o Study of Chakras, Koshas, Pranas, Nadis, Gunas, Vayus and its application in Yogic practices.
- o Ashtang Yoga: - Yama, niyama, asana, pranayama, Pratyahar, dharna, dhyana, Samadhi : Benefits, Utilities & their psychological impact on body and mind. According to yoga concept of normality in modern psychology, concept of personality & its development, yogic management of psycho-somatic ailments: frustration, anxiety, depression

Unit- 2

6 Hours

- o Sports for Physical Fitness: Meaning and definition
- o Physical Activity – Concept, Benefits of Participation in Physical Activities
- o Components and Significance of Physical Fitness -Health, Skill and Cosmetic Fitness

FACULTY OF COMPUTER APPLICATIONS

| CBCA25VA4 | SPORTS MANAGEMENT | L | T | P | C | TY/Lb/IE |
|-----------|-------------------|---|---|---|---|----------|
| | | 0 | 0 | 4 | 2 | IE |

Sports Management course is designed to provide undergraduate students with a broad, foundational understanding of the dynamic field of sports management. This course will familiarize students with the fundamental principles and concepts of sports management, including its scope, organizational structure, and ethical considerations. Students will gain insights into the roles of marketing and sponsorship in the sports industry, as well as develop proficiency in financial management techniques specific to sports organizations. Additionally, the course will explore the application of analytics and technology in sports, enhancing the strategic decision-making and fan engagement capabilities.

CourseObjective(s):

- i. Understand the fundamental principles and concepts of sports management, including its scope, organizational structure, and ethical considerations.
- ii. Analyse the role of marketing and sponsorship in the sports industry, with a focus on branding, target audience segmentation, and event management.
- iii. Develop proficiency in financial management techniques specific to the sports industry, including revenue generation, cost management, and investment strategies.
- iv. Explore the application of analytics and technology in sports, including performance evaluation, strategic decision-making, and fan engagement.
- v. Apply theoretical knowledge to practical scenarios through case studies and projects, fostering critical thinking and problem-solving skills in sports management contexts.

Course Content:

Unit 1: Introduction to Sports Management , Definition and scope of sports management ,Significance of sports management in society and its evolution over time ,Organizational structure of sports: amateur, professional, and non-profit entities ,Roles and responsibilities of key personnel: managers, coaches, and agents ,Governance bodies in sports: FIFA, IOC, and NCAA ,Legal issues: contracts, negotiations, intellectual property rights ,Ethical considerations: fair play and doping

Unit 2: Sports Marketing and Sponsorship .Unique aspects of sports marketing .Fan engagement strategies .Target audience identification and segmentation .Branding strategies for sports teams and

| CBCA25VA5 | <u>National Cadet Corps (NCC)</u> | L | T | P | C | TY/Lb/IE |
|-----------|-----------------------------------|---|---|---|---|----------|
| | | 0 | 0 | 4 | 2 | IE |

This course develops essential skills in discipline, leadership, and tactical operations through structured curriculum and practical exercises. It emphasizes the role of drills in fostering discipline, leadership, and teamwork, and includes comprehensive weapon handling training with a focus on safety protocols. The course teaches map reading, understanding topographical features, and navigating diverse terrains. Practical units cover the history and objectives of the National Cadet Corps (NCC), various maneuvers, parade formations, saluting protocols, and field and battlecraft techniques. By the end, learners will master discipline, leadership, weapon handling, and tactical decision-making, effectively utilizing terrain features for strategic advantages.

Course Objective(s):

1. Understand the foundational role of drill in fostering discipline and leadership within a group, enabling effective command towards achieving common goals.
2. Appreciate the importance of grace and dignity in executing foot drill movements, recognizing their significance in enhancing performance and teamwork.
3. Comprehend the criticality of weapon handling and detailed safety measures, emphasizing the importance of accident prevention through strict adherence to safety protocols.
4. Develop an awareness of diverse terrain types and their strategic significance in battle craft, enabling informed decision-making and effective utilization of terrain features for tactical advantage.

Course Content(Practical):

Unit 1:

Overview of NCC, its history, aims, objectives, and organizational structure, Incentives and duties associated with NCC cadetship; Maneuvers: Foot drill, Word of Command, Attention, and stand at ease, and Advanced maneuvers like turning and sizing; Parade formations: Parade line, open line and closed line; Saluting protocols, parade conclusion, and dismissal procedures. Marching styles: style march, double time march, and slow march

FACULTY OF COMPUTER APPLICATIONS

BCA- General Full Time Program - Curriculum & Syllabus **Program Structure for BCA DT (Full Time)**

Unit 2:

Weapon Training, Handling fire arms, Introduction and characteristics of the 22rifle; Handling Firearm techniques, emphasizing safety protocols and Best practices.

Unit 3:

Map Reading (MR): Topographical forms and technical terms, including relief, contours, and gradients, crucial for understanding terrain features; Cardinal points, magnetic variation and grid convergence

Unit 4:

Field Craft & Battle Craft (FC & BC): Fundamental principles and techniques essential for effective field and battle craft operations; Methods of judging distance, including estimation, pacing, and visual cues

References:

- [Directorate General National Cadet Corps](#) (2003). National Cadet Corps, Youth in Action.
- Vanshpal, Ravi (2024). The NCC Days, Notion Press.

Course Outcome(s):

1. Mastery of Discipline and Leadership through Drill Learners would demonstrate the ability to effectively command a group, foster discipline, and work collaboratively towards achieving shared objectives.
2. Mastery of Grace and Dignity in Foot Drill Performance Learners would demonstrate an understanding of how these qualities enhance performance and foster teamwork within a group setting.
3. Proficient Weapon Handling and Safety Adherence Learners would showcase a thorough understanding of the criticality of safety measures, emphasizing accident prevention through strict adherence to safety protocols.
4. Enhanced Tactical Awareness and Strategic Decision-Making Learners would gain the ability to make informed decisions and effectively utilize terrain features to gain tactical advantage during operations.

| CBCA25VA6 | National Service Scheme (NSS) | L | T | P | C | TY/Lb/IE |
|-----------|-------------------------------|---|---|---|---|----------|
| | | 0 | 0 | 4 | 2 | IE |

This course provides students with an in-depth understanding of the National Service Scheme (NSS), including its history, philosophy, aims, objectives and organizational structure. It equips students with knowledge about various NSS programmes and activities, emphasizing their relevance and importance. The course also develops skills in community mobilization, teaching students effective techniques for engaging and mobilizing community stakeholders. Additionally, it cultivates an appreciation for volunteerism and shramdan (voluntary labor), highlighting their role in community development initiatives. By the end of the course, students will have a comprehensive understanding of NSS, enhanced leadership and team-building skills, and a strong sense of social awareness and patriotism.

Course Objective(s):

1. To provide students with an understanding of the history, philosophy, and basic concepts of the National Service Scheme (NSS).
2. To familiarize students with the aims, objectives, and organizational structure of NSS.
3. To equip students with knowledge about NSS programmes, activities, and their relevance.
4. To develop an understanding of community mobilization techniques and their importance in NSS activities.
5. To cultivate an appreciation for volunteerism, shramdan (voluntary labor), and their role in community development initiatives.

Course Content:

Unit 1: Introduction and Basic Concepts of NSS

National Service Scheme (NSS) - history, philosophy, and fundamental concepts, aims and objectives, providing clarity on the organization's overarching goals. Symbols of NSS - Emblem, flag, motto, song, and badge; Organizational structure of NSS

Unit 2: NSS Programmes and Activities

Diverse programmes and activities conducted under the aegis of the National Service Scheme (NSS); Significance of commemorating important days recognized by the United Nations, Centre, State Government, and University; Examination of the methodology for adopting villages/slums and conducting surveys; Financial patterns of the NSS scheme

| CBCA25VA7 | DISASTER MANAGEMENT | L | T | P | C | TY/Lb/IE |
|-----------|---------------------|---|---|---|---|----------|
| | | 0 | 0 | 4 | 2 | IE |

In our rapidly evolving 21st-century world, challenges emerge in diverse forms, transcending borders and intertwining economic, societal, and environmental realms. These challenges profoundly affect vulnerable communities, magnifying their susceptibility to climate-related shocks and disasters. As we navigate through these complexities, it becomes increasingly evident that aligning strategies with global Sustainable Development Goals (SDGs) across various geographical scales is paramount. This alignment incorporates perspectives of environmental sustainability, climate adaptation, and disaster resilience. In light of these considerations, this course aims to equip students with the knowledge and skills necessary to address and mitigate the impacts of disasters in a holistic manner.

Course Objective(s):

- To provide understanding of the concepts related to disaster
- To highlight the importance and role of disaster management
- To enhance awareness of institutional processes and management strategies to mitigate the impacts of disasters

Course Content:

Unit 1: Concepts and Terminologies

Understanding key concepts of Hazards, disasters; Disaster types and causes (Geophysical, Hydrological, Meteorological, Biological and Atmospheric; Human-made); Global trends in disasters - Impacts (Physical, Social, Economic, Political, Environmental and Psychosocial); Defining Vulnerability (Physical Vulnerability; Economic Vulnerability; Social Vulnerability)

Unit 2: Key concepts of Disaster Management Cycle

Components of disaster management cycle (Phases: Response and recovery, Risk assessment, Mitigation and prevention, Preparedness planning, Prediction and warning); Disaster risk reduction (DRR), Community based disaster risk reduction

Unit 3: Initiatives at national and international level

Disaster Risk Management in India and at international level: Related policies, plans, programmes and legislation; International strategy for disaster reduction and other
