Curriculum and Syllabus
2018 Regulation

S. No	Sub. Code	Title of the Subject	L	T	P	C
		I SEMESTER				
1	MMA180001	Probability And Statistical Methods For Industrial Engineers	3	1	0	4
2	MME18I001	Work Design and Ergonomics	3	0	0	3
3	MMA18I001	Advanced Optimization Techniques	3	1	0	4
4	MME18I002	Analysis and Control of Manufacturing Systems	3	0	0	3
5	MME18I003	Facilities Planning and Design	3	0	0	3
6	MXX18XXX	Elective I	3	0	0	3
7	MME18IL01	Industrial Engineering Lab.	0	0	4	2
		TOTAL	18	2	4	22

S. No	Sub. Code	Title of the Subject	L	T	P	C
		II SEMESTER				
1	MME18I005	Manufacturing Systems Modeling	3	0	0	3
2	MME18I006	Simulation Modeling and Analysis	3	0	0	3
3	MME18I007	Quality Engineering	3	0	0	3
4	MME18I008	Supply Chain Management	3	0	0	3
5	MME18I009	Design of Cellular Manufacturing Systems	3	1	0	4
6	MXX18XXX	Elective II	3	0	0	3
7	MME18IL02	Simulation Lab	0	0	4	2
		TOTAL	18	1	4	21

S. No	Sub. Code	Title of the Subject	L	T	P	C
		III SEMESTER				
1	MME18I011	Design and Analysis of Experiments	3	1	0	4
2	MME18I012	Engineering Economics	3	0	0	3
3	MME18I013	Sequencing and Scheduling	3	1	0	4
4	MXX18XXX	Elective III	3	0	0	3
5	MXX18XXX	Elective IV	3	0	0	3
6	MME18IL03*	Project Phase I	0	0	6	3
		TOTAL	15	2	6	20

*Students should identify the topic of the Project and should collect the literatures and datas, at the end of the semester the students should submit their Project Phase-I   report to the Department and Viva-Voce examination will be conducted with external examiners and this carries 3 credits

MMA180001   **PROBABILITY AND STATISTICAL METHODS**   **3**   **1**   **0**   **4**
FOR INDUSTRIAL ENGINEERS

OBJECTIVES:
- The student will learn basic probability & statistical mathematical tools and techniques which emphasize the development of rigorous logical thinking and analytical skills.
- Also learn the theory and applications of implementation of DOE and testing hypothesis Transformation.

UNIT I: **ONE DIMENSIONAL RANDOM VARIABLES**   **12 Hrs**

Random variables – Probability function – Moments – Moment generating functions and their properties – Binomial, Poisson, Exponential, and normal distributions – Functions of a Random variable.

UNIT II: **TWO DIMENSIONAL RANDOM VARIABLES**   **12 Hrs**

Joint distributions – Marginal and conditional distributions – Functions of two dimensional random variables – Correlation – Regression.

UNIT III: **ESTIMATION THEORY**   **12 Hrs**

Unbiased estimators – Method of moments –Maximum likelihood estimation – Curve fitting by Principle of least squares.

UNIT IV: **TESTING OF HYPOTHESIS**   **12 Hrs**

Tests of Significance – Large Sample Tests – Mean – Proportions – Small Sample Tests – t, F, Chi-square Tests: Independence of Attributes, Goodness of Fit.

UNIT V: **DESIGN OF EXPERIMENTS**   **12 Hrs**

Analysis of Variance – One way classification – Two way classification – Design of Experiments – Completely Randomized Block Design – Randomized Block Design – Latin Square Design.

Total no. of hrs: 60

Department of Mechanical Engineering

MME18I001　　　　**WORK DESIGN AND ERGONOMICS**　　　　**3　0　0　3**

OBJECTIVES:

- The student will learn basic tools and fundamentals in method study and time which emphasize the improvement of overall productivity and focused theory and applications of ergonomic study.

UNIT I METHOD STUDY　　　　　　　　　　　　　　　　　　**9 Hrs**

Work design and Productivity – Productivity measurement - Total work content, Developing methods – operation analysis, motion & micro motion study, graphic tools.

UNIT II WORK MEASUREMENT　　　　　　　　　　　　　　**9 Hrs**

Stop watch time study, Performance rating, allowances, standard data-machining times for basic operations, learning effect

UNIT III APPLIED WORK MEASUREMENT　　　　　　　　　**9 Hrs**

Methods time measurement (MTM), Work sampling, organization and methods (O & M), Wage incentive plans.

UNIT IV PHYSICAL ERGONOMICS　　　　　　　　　　　　**9 Hrs**

Physical work load and energy expenditure, Anthropometry – measures – design procedure, Work postures-sitting, standing - measurement – ergonomic implications. Design of displays and controls,

UNIT V ENVIRONMENTAL FACTORS　　　　　　　　　　　**9 Hrs**

Sources & effects of Noise, Vibration, lighting, temperature, humidity & atmosphere. Measures for monitoring control & mitigation.

Total no. of hrs: 45

MMA18I001 **ADVANCED OPTIMIZATION TECHNIQUES** **3 1 0 4**

OBJECTIVES:
- Developing skills in analysis and finding optimized methods with diverse input parameters and developing problem solving techniques using updated mathematical models, algorithms, software programs and simulations.

UNIT I: INTRODUCTION   10 Hrs

Introduction, Classification of optimization problems, Applications of optimization, concepts of design vector, Design constraints, constrain surface, objective function surfaces and multilevel optimization.

UNIT II: NON- LINEAR PROGRAMMING   14 Hrs

Karmakars method of solving L.P. problems, Integer linear programming methods and applications, Quadratic programming, non-linear programming – unconstrained optimization techniques, Basics of constrained optimization, Introduction to integer non-linear programming, Basics of geometric programming

UNIT III: CONSTRAINED OPTIMIZATION   12 Hrs

Kuhn-Tucker, transformation, sensitivity analysis, direct search, linearised search, reduced gradient, gradient projection, computer program- Penality function method

UNIT IV: MULTI-OBJECTIVE MODELS   13 Hrs

Multi-objective optimization methods and applications, Formulation of problems – Separable programming and stochastic programming.

UNIT V: META-HEURISTIC MODELS   11 Hrs

Introduction to Genetic algorithms, Tabu and Scatter search algorithms, Ant, Simulated Annealing, neural network , fuzzy system.

Total no. of hrs: 60

MME18I002   ANALYSIS AND CONTROL OF MANUFACTURING SYSTEMS   3 0   0   3

OBJECTIVES:

- The student will learn the concept of control and analysis of various fields in manufacturing systems. In particular methods involved in forecasting, planning and Inventory control systems.

UNIT   I: INTRODUCTION   5 Hrs

Production Management – Input-output model, objectives, Trends and challenges, value chains, operations strategy, Technological Innovations in Manufacturing, Corporate strategic choices, Process planning and selection.

UNIT   II: FORECASTING   10 Hrs

The forecasting process, Time series forecasting models – moving averages, exponential smoothing-multi-item forecasting- regression models, qualitative methods, forecasting system controls

UNIT   III: PLANNING ACTIVITIES   10 Hrs

Capacity planning, aggregate production planning strategies and methods, Master Production Schedule, MRP, MRP II, CRP, ERP,SAP

UNIT   IV: CONTROL ACTIVITIES   10 Hrs

Production Activity Control, Just-in-time systems, Scheduling in Manufacturing, Theory of constraints and synchronous manufacturing.

UNIT   V: INVENTORY MANAGEMENT   10 Hrs

Introduction, Types of inventories, reasons for keeping inventories, inventory control, benefits of inventory control, cost associated with inventory, inventory cost relationships, safety stock, inventory models, deterministic and stochastic models, inventory control system, selective control of inventory.

Total no. of hrs: 45

MME18I003   **FACILITIES PLANNING AND DESIGN**   **3 0 0 3**

OBJECTIVES:
- The student will learn the concepts and basic tools in facilities planning. It focused various strategies involved in plan location, layout design and material handling systems.

UNIT I: **INTRODUCTION**   **5 Hrs**

Facilities planning, significance, objectives, requirement, process, product and schedule design, need for layout study – types of layout

UNIT II: **PLANT LOCATION**   **10 Hrs**

Plant location analysis – factors, costs, location decisions – single facility location models, multi facility location models- set covering problem – warehouse location problems

UNIT III: **LAYOUT DESIGN**   **10 Hrs**

Design cycle – SLP procedure, nadler's ideal approach, flow and activity analysis, computerized layout planning procedure – ALDEP, CORELAP, CRAFT

UNIT IV: **GROUP TECHNOLOGY AND LINE BALANCING**   **10 Hrs**

Group technology – Production Flow analysis (PFA), ROC (Rank Order Clustering) – Line balancing, single, multi and mixed mode, parallel line and parallel station

UNIT V: **MATERIAL HANDLING**   **10 Hrs**

Principles, unit load concept, material handling system design, handling equipment types, selection and specification, handling cost, containers and packaging

Department of Mechanical Engineering

MME18I005   **MANUFACTURING SYSTEMS MODELING**   **3 0 0 3**

OBJECTIVES:
- The student will learn analytical ability in modelling of manufacturing system. It focused various strategies involved in lean , queuing and markov systems.

UNIT I: INTRODUCTION   **5 Hrs**

Manufacturing systems – types and concepts, manufacturing automation - Performance measures – types and uses of manufacturing models

UNIT II: FOCUSSED FACTORIES   **9 Hrs**

GT/CMS, FMS planning, design and control. Process planning – variant and generative approaches of CAPP, general serial systems – analysis of paced and unplaced lines.

UNIT III: LEAN SYSTEMS   **9 Hrs**

Characteristics of Lean systems for services and Manufacturing, Pull method of work flow, Small lot sizes, Kanban system, Value stream mapping, JIT

UNIT IV: QUEUING MODELS OF MANUFACTURING   **10 Hrs**

Basic Queuing models, Queuing networks, application of queuing models for AMS.

UNIT V: MARKOV AND PETRINET MODELS OF MANUFACTURING   **12 Hrs**

Stochastic processes in manufacturing, discrete and continuous time Markov chain models. Concepts of Petri nets, ETPN and GSPN models.

Total no. of hrs: 45

MME18I006   **SIMULATION MODELLING AND ANALYSIS**   **3 0 0 3**

OBJECTIVES:
- The student will learn various steps involved in system simulation and import the implementation knowledge with soft skill.

UNIT I: INTRODUCTION   **3 Hrs**

Systems, modeling, general systems theory, concept of simulation, simulation as a decision making tool, mathematical and statistical models. Modeling formalism simulators ,DEVS,DTSS,DESS.

UNIT II: RANDOM NUMBERS AND VARIATES   **5 Hrs**

Pseudo random numbers, techniques and tests for random numbers, inverse-transforms, acceptance-rejection techniques, special properties of variates.

UNIT III: DESIGN OF SIMULATION EXPERIMENTS   **8 Hrs**

Problem formulation, data collection and reduction, time flow mechanism, key variables, logic flow chart, starting condition, run size, experimental design consideration, output analysis and interpretation validation.

UNIT IV: APPLICATIONS   **14 Hrs**

Simulation of manufacturing and material-handling system, performance measures, various failures. Comparison and selection of simulation languages, study of any one simulation language.

UNIT V: CASE STUDIES / MINI PROJECT   **15 Hrs**

Development of simulation models using the simulation language studied for systems like, queuing systems, production systems, inventory systems, maintenance and replacement systems, investment analysis and network.

MME18I007   **QUALITY ENGINEERING**   **3 0 0 3**

OBJECTIVES:

- Students will gain knowledge on Quality Engineering, in particular, Basic Concepts, Control Charts, Sampling Inspection & TQM; this would enable them to apply this knowledge in Manufacturing Industries in real life.

UNIT I: QUALITY CONCEPTS   **6 Hrs**

Quality, History of Quality, Quality Control, Quality Assurance, Quality Costs, Optimum Quality, Opportunity Loss, Taguchi's Quality loss function

UNIT II: CONTROL CHARTS FOR VARIABLES & PROCESS CAPABILITY   10 Hrs

Statistical Process Control (SPC), Control Charts for Variables, Action & Warning Limits in Control Charts, Process Capability, Process Capability Indices, Process Capability Studies, Problems in Control Charts for Variables

UNIT III: OTHER CONTROL CHARTS   **8 Hrs**

Control Charts for Attributes, Special Control Charts – Group Control Chart, Moving Averages/Moving Range Control Charts, Difference Control Charts, Mid-Range and Median Control Charts & Cumulative Sum Control Charts

UNIT IV: SAMPLING ISPECTION   **9 Hrs**

Economics of Sampling, Sampling Methods, Sampling Plans, OC Curves, Quality Indices, Standard tables used in Sampling Inspection - Dodge-Romig & ABC Standard

UNIT V: TOTAL QUALITY MANAGEMENT (TQM)   **12 Hrs**

Main Concepts of TQM, Quality Dimensions, TQM concepts in depth - KAIZEN, POKA YOKE, Six Sigma, 5S & Kano's Model, TQM Tools – Benchmarking, QFD & FMEA

Total No. of Hrs: 45

Department of Mechanical Engineering

MME18I008   **SUPPLY CHAIN MANAGEMENT**   **3 0 0 3**

OBJECTIVES:
- The student will learn basic conceptual idea of supply chain management systems and its internal structural systems. Also focused the theory and applications of SCM networks with simple case study.

UNIT   I: **INTRODUCTION**   **6 Hrs**

Definition of Logistics and SCM: Evolution, Scope, Importance& Decision Phases – Drivers of SC Performance and Obstacles.

UNIT   II: **LOGISTICS MANAGEMENT**   **10 Hrs**

Factors – Modes of Transportation   - Design options for Transportation Networks-Routing and Scheduling – Inbound and outbound logistics- Reverse Logistics – 3PL- Integrated Logistics Concepts- Integrated Logistics Model – Activities - Measuring logistics cost and performance – Warehouse Management - Case Analysis

UNIT   III: **SUPPLY CHAIN NETWORK DESIGN**   **10 Hrs**

Distribution in Supply Chain – Factors in Distribution network design –Design options-Network Design in Supply Chain – Framework for network Decisions - Managing cycle inventory and safety.

UNIT   IV: **SOURCING AND PRICING IN SUPPLY CHAIN**   **9 Hrs**

Supplier selection and Contracts - Design collaboration - Procurement process. Revenue management in supply chain

UNIT   V: **COORDINATION AND TECHNOLOGY IN SUPPLY CHAIN**   **10 Hrs**

Supply chain coordination - Bullwhip effect – Effect of lack of co-ordination and obstacles – IT and SCM - supply chain IT frame work. E Business & SCM. Metrics for SC performance – Case Analysis

MME18I009   DESIGN OF CELLULAR MANUFACTURING SYSTEMS   3 1 0 4

OBJECTIVES:
- The student will learn basic methodology of cellular manufacturing system which emphasizes more on implementation and performance measures of group technology. Also focused theory and applications of design, planning and control for cell performance

UNIT I: INTRODUCTION   8 Hrs

Introduction to Group Technology, limitations of traditional manufacturing systems, characteristics and design of groups, benefits of GT and issues in GT.

UNIT II: CMS PLANNING AND DESIGN   15 Hrs

Problems in GT/CMS - Design of CMS – Production Flow Analysis, Optimization Models, traditional approaches and non-traditional approaches- Simulated Annealing, Genetic Algorithms

UNIT III: IMPLEMENTATION OF GT/CMS   13 Hrs

Inter and intra cell layout and capacity planning. Managerial structure and groups, batch sequencing and sizing, life cycle issues in GT/CMS. Linkages to JIT systems

UNIT IV: PERFORMANCE MEASUREMENT AND CONTR   13 Hrs

Measuring CMS performance - Parametric analysis - PBC in GT/CMS, cell loading, GT and MRP - framework.

UNIT V: ECONOMIC OF GT/CMS   11 Hrs

Conventional Vs group   use of computer models in GT/CMS, Human aspects of GT/CMS - cases.

Total no. of hrs: 60

MME18IL02   **SIMULATION LAB**   0   0   4   2

OBJECTIVES:

- The student will learn various GUI based simulation software knowledge in the management system. Also import algorithm knowledge in the management system.

1. Modeling and simulation of facilities layout using WITNESS software

2. Modeling and simulation Transportation models using ARENA software

3. Modeling and simulation job shop scheduling using QUEST software

4. Modeling and simulation material handling system using PROMODEL software

5. Queing & Inventory modeling in C language

6. Random variate generate using C

7. Robot work cell simulation

8. Simulation using simulink (MATLAB/LABVIEW)

Total no. of hrs: 45

Department of Mechanical Engineering

MME18I011   **DESIGN AND ANALYSIS OF EXPERIMENTS**   **3 1 0 4**

OBJECTIVES:
- The student will learn basic mathematical tools in design of experiments which emphasize the development of rigorous logical thinking and analytical skills. Also learn the theory and applications of implementation of special experiment design and Taguchi method.

UNIT I: **EXPERIMENTAL DESIGN FUNDAMENTALS**   **9 Hrs**

Importance of experiments, experimental strategies, basic principles of design, terminology, ANOVA, steps in experimentation, sample size, normal probability plot, linear regression model.

UNIT II: **SINGLE FACTOR EXPERIMENTS**   **12 Hrs**

Completely randomized design, Randomized block design, Latin square design. Statistical analysis, estimation of model parameters, model adequacy checking, pair wise comparison tests.

UNIT III: **MULTIFACTOR EXPERIMENTS**   **13 Hrs**

Two and three factor full factorial experiments, 2^K factorial Experiments, Confounding and Blocking designs.

UNIT IV: **SPECIAL EXPERIMENTAL DESIGNS:**   **13 Hrs**

Fractional factorial design, nested designs, Split plot design, Introduction to Response Surface Methodology, Experiments with random factors, rules for expected mean squares, approximate F- tests.

UNIT V: **TAGUCHI METHODS**   **13 Hrs**

Steps in experimentation, design using Orthogonal Arrays, data analysis, Robust design- control and noise factors, S/N ratios, parameter design, case studies.

                                                            Total no. of hrs: 60

MME18I012   **ENGINEERING ECONOMICS**   **3 0 0 3**

OBJECTIVES:
- The student will learn basic conceptual idea of engineering economics which emphasize the importance of demand and supply. Also learn the theory and applications of forecasting techniques, market competition and national income and its policies.

UNIT I: DEMAND ANALYSIS AND FORECASTING   **10 Hrs**

Managerial Economics – Meaning, Nature and Scope – Managerial Economics and Business decision making – Role of Managerial Economist – Demand Analysis – Fundamental Concepts of Managerial Economics – Meaning, Determinants and Types of Demand – Elasticity of demand - Demand forecasting and forecasting methods.

UNIT II: PRODUCTION FUNCTION AND COST ANALYSIS   **10 Hrs**

Supply: Meaning and determinants – production function- Isoquants – Expanstion path Cobb Douglas function – Cost concepts – Cost output relationship – Economies and diseconomies of scale – Cost functions- Determination of cost- Estimation of cost.

UNIT III: MARKET COMPETITION AND PRICING   **10 Hrs**

Market Structure – Various forms – Equilibrium of a firm – Perfect competition – Monopolistic competition – Oligopolistic competition – Pricing of products under different market structures – Methods of pricing – Factors affecting pricing decision – Differential pricing – Government Intervention and pricing.

UNIT IV: PROFIT ANALYSIS   **07 Hrs**

The concept of profit: Profit planning, control and measurement of profits. Profit maximisation – Cost volume profit analysis – Investment Analysis.

UNIT V: NATIONAL INCOME AND POLICY   **08 Hrs**

National Income – Accounting – Consumption and investment – Business Cycle and unemployment – Inflation and deflation, Balance of Payments – Monetary and Fiscal policies.

Total no. of hrs: 45

MME18I013	SEQUENCING AND SCHEDULING	3 1 0 4

OBJECTIVES:

- The student will learn mathematical tools and its algorithms in sequencing and scheduling which emphasize the improvement of productivity and time. Also learn the theory and applications of various patterns like parallel machine, flow shop, job shop problems.

UNIT I: SINGLE MACHINE MODELS   12 Hrs

Single machine models - Scheduling function and theory – scheduling problem: objectives, constraints – pure sequencing – performance measures, sequencing theorems - SPT, EDD. Sequence – minimization of mean flow time, mean tardiness etc – branch and bound algorithm –assignment model.

UNIT II: PARALLEL MACHINE MODELS   12 Hrs

Parallel machine models - Independent jobs Minimizing makespan, completion time, due date and on-line problems.

UNIT III: FLOW SHOP MODELS   12 Hrs

Flow shop models - Johnson's problem – Extension of Johnsons's rule for 3 machine
problem – Jackson's method – algorithm – Palmer's method.

UNIT IV: JOB SHOP MODELS   12 Hrs

Job shop models – disjunctive, shifting bottle neck, weighted tardiness, makespan, dynamic job shop simulation.

UNIT V: SCHEDULING IN PRACTICES   12 Hrs

Other models - Scheduling of intermittent production: Resource smoothing – Giffler
Thomson algorithm – Branch and Bound method – Scheduling of continuous production - Line balancing.

Total no. of hrs: 60

MME18IL03   **PROJECT PHASE I**   **0 0 6 3**

OBJECTIVES:
- The student will learn the partial research methodology of any mechanical real-world problem.
- They will learn how to use methods/tools to resolve those problems.
- They will have extensive literature survey of the problem selected.

Students should select the area of the project work and complete the literature survey. Student should identify the problem of study and start the work. Students are expected to do the project work individually. A guide will be allotted to each student based on the area of the Project work. Project reviews will be conducted once in a fortnight to asses the development of the project   work.

At the end of the semester students should submit a report of the work completed and should appear for a Project Viva- voce examination conducted by the internal examiner.

Continuous assessment mark (50 marks) will be awarded based on the performance in the reviews.

End semester mark (50 marks) will be awarded for project viva voce examination.

Department of Mechanical Engineering

MME18IL04   **PROJECT PHASE II**   **0 0 24 12**

OBJECTIVES:
- To implement their innovative ideas to solve the real time industrial engineering problems.
- To apply the industrial engineering to solve the problems.

Students are expected to do a Project work either in an Industry or at the University in the area of specialization individually. Each student will be allotted a guide based on the area of Project work

Number of reviews will be conducted during the semester to monitor the development of project. Students have to submit the thesis at the end of the semester and appear for the Project Viva-Voce examination conducted by one internal examiner and one external examiner.

It is mandatory that the student should have presented his project work as a technical paper in National/international conference /Journals. A copy of the certificate in proof of paper presentation should be enclosed in the project report.

50% weightage (100 marks) will be given for the continuous assessment and 50% weightage (100 marks)for the Project viva a voce examination.

Department of Mechanical Engineering

MME18IE01   **TOTAL QUALITY MANAGEMENT AND SYSTEMS**   3   0   0   3

OBJECTIVES:
- A world-wide concept of the best management principles to be studied for effective implementation to achieve best results in terms of customer satisfaction and interests of company.

UNIT- I: INTRODUCTION   **9 Hrs**
Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM - TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Quality statements - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, Customer retention - Costs of quality.

UNIT- II: TQM PRINCIPLES   **9Hrs**
Leadership - Strategic quality planning, Quality Councils - Employee involvement - Motivation, Empowerment, Team and Teamwork, Quality circles Recognition and Reward, Performance appraisal - Continuous process improvement - PDCA cycle, 5S, Kaizen - Supplier partnership - Partnering, Supplier selection, Supplier Rating..

UNIT III TQM TOOLS AND TECHNIQUES I   **9 Hrs**
The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology, applications to manufacturing, service sector including IT - Bench marking - Reason to bench mark, Bench marking process - FMEA - Stages, Types

UNIT IV TQM TOOLS AND TECHNIQUES II   **9Hrs**
Control Charts - Process Capability - Concepts of Six Sigma - Quality Function Development (QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performance measures.

UNIT- V: QUALITY SYSTEMS   **9Hrs**
Quality Management system- need for ISO 9000 and Other Quality Systems- ISO 9001-2008 and ISO 9001-2015, Quality System –Elements- Implementation –Documentation- Auditing, Environmental Management System - ISO 14000 Concept, Requirements and Benefits.

Department of Mechanical Engineering

MME18IE02	**RELIABILITY ENGINEERING**	**3 0 0 3**

OBJECTIVES:

- Improvement of Reliability of equipment by various scientific methods and implementation of them, for optimal life and efficiency in functioning of equipments to be studied.

UNIT I: **RELIABILITY CONCEPT**   **9 Hrs**

Reliability definition – Reliability applications – Reliability mathematics – f(t), F(t), R(t) functions – Hazard rate function – Reliability parameters – Measures of central tendency – Design life –A priori and posteriori probabilities – Component mortality –Mortality curve – Useful life.

UNIT II;   **LIFE DATA ANALYSIS**   **11 Hrs**

Data classification –Nonparametric methods: Ungrouped, Grouped, Complete, Censored data – Time to failure distributions – Probability plotting: Exponential, Weibull –Goodness of fit tests – Survival graphs.

UNIT III: **RELIABILITY MODELLING**   **10 Hrs**

Series parallel configurations – Parallel redundancy – k out of n system – Complex systems: RBD method – Baye's approach – Minimal path and cut sets – Fault Tree Analysis – Standby system – Physical reliability models.

UNIT IV: **RELIABILITY MANAGEMENT**   **8 Hrs**

Reliability testing: Failure terminated test – Time terminated test – Upper and lower MTBFs –Sequential Testing –Reliability growth monitoring – Reliability allocation – Software reliability – Human reliability.

UNIT V: **RELIABILITY IMPROVEMENT**   **7 Hrs**

Analysis of downtime – Repair time distribution – System repair time – Maintainability prediction – Measures of maintainability   – Availability definitions –System Availability – Replacement decisions – Economic life.

                                                                Total no. of hrs: 45

MME18IE03   **PRODUCTIVITY MANAGEMENT AND RE-ENGINEERING**   **3 0 0 3**

OBJECTIVES:
- To improve the existing processes in manufacturing by re-engineering, and management with analytical tools and models and a study of the success factors after implementing them.

UNIT I: **PRODUCTIVITY**   **9 Hrs**

Productivity Concepts – Macro and Micro factors of productivity – Dynamics of Productivity - Productivity Cycle Productivity Measurement at International, National and Organisation level - Productivity measurement models

UNIT II: **SYSTEMS APPROACH TO PRODUCTIVITY MEASUREMENT**   **9 Hrs**

Conceptual frame work, Management by Objectives (MBO), Performance Objectivated Productivity (POP) – Methodology and application   to manufacturing and service sector.

UNIT III: **ORGANISATIONAL TRANSFORMATION**   **9 Hrs**

Elements of Organisational Transformation and Reengineering-Principles of organizational transformation and re-engineering, fundamentals of process re-engineering, preparing the workforce for transformation and re-engineering, methodology, guidelines, LMI CIP Model – DSMC Q & PMP model.

UNIT IV: **RE-ENGINEERING PROCESS IMPROVEMENT MODELS**   **9 Hrs**

PMI models, PASIM Model, Moen and Nolan Strategy for process improvement, LMICIP Model, NPRDC Model.

UNIT V: **RE-ENGINEERING TOOLS AND IMPLEMENTATION**   **9 Hrs**

Analytical and process tools and techniques – Information and Communication Technology – Implementation of Reengineering Projects – Success Factors and common implementation Problem – Cases.

                                                              Total no. of hrs: 45

MME18IE05   **MAINTAINABILITY ENGINEERING**   **3 0 0 3**

OBJECTIVES:
- Productive maintenance theories and models for loss prevention and quality functioning of machines and other equipments are necessary for control and improvement in maintenance.

UNIT I: **MAINTENANCE CONCEPT**   **6 Hrs**

Need for maintenance – Maintenance definition – Maintenance objectives – Challenges of Maintenance management – Tero technology – Scope of maintenance department – Maintenance costs.

UNIT II: **MAINTENANCE MODELS**   **12 Hrs**

Proactive/Reactive maintenance – Imperfect maintenance – Maintenance policies – PM versus b/d maintenance – Optimal PM schedule and product characteristics – Optimal Inspection frequency: Maximizing profit – Minimizing downtime – Replacement models.

UNIT III: **MAINTENANCE LOGISTICS**   **11 Hrs**

Human factors – Crew size decisions: Learning curves – Simulation – Maintenance resource requirements: Optimal size of service facility – Optimal repair effort – Maintenance planning – Maintenance scheduling – Spare parts control – Capital spare.

UNIT IV: **MAINTENANCE QUALITY**   **8 Hrs**

Maintenance excellence –Five Zero concept –FMECA –Root cause analysis – System effectiveness – Design for maintainability – Maintainability allocation – CMMS – Reliability Centered Maintenance.

UNIT V: **TOTAL PRODUCTIVE MAINTENANCE**   **8 Hrs**

TPM features – Chronic and sporadic losses – Equipment defects – Six major losses – Overall Equipment Effectiveness – TPM pillars –TPM implementation – Autonomous maintenance.

                                                  Total no. of hrs: 45

MME18IE06   **HUMAN FACTORS AND ERGONOMICS**   **3 0 0 3**

OBJECTIVES:
- Design of various equipments, facilities and environment to achieve health and comfort in their usage and standardizing the size and dimensions of various engineering items are aimed in this study.

UNIT I: PHYSIOLOGICAL PERFORMANCE   10 Hrs

Factors affecting physiological performance, physical work load and energy expenditure, heat stress, manual lifting, shift work

UNIT II: WORK SPACE DESIGN   10 Hrs

Anthropometry, Workspace designs for standing and seated workers, arrangement of components within a physical space, interpersonal aspect of workplace design.

UNIT III: DESIGN OF EQUIPMENT   10 Hrs

Ergonomic factors to be considered in the design of displays and control, design for maintainability, design of human computer interaction.

UNIT IV: COGNITIVE ERGONOMICS   5 Hrs

Information Theory, Information processing, signal detection theory, Human response, human errors, cognitive task analysis.

UNIT V: DESIGN OF ENVIRONMENT   10 Hrs

Vision and Illumination design – Noise and Vibration

Total no. of hrs: 45

MME18IE08 **INDUSTRIAL AUTOMATION** **3 0 0 3**

OBJECTIVES:
- Usage of computer software programs for performance and production in industries and making the best economical decisions taking into factors of speed, accuracy, less manpower cost, quality and customer satisfaction.

UNIT I: **AUTOMATION** **5 Hrs**

Types of production – Functions – Automation strategies – Production economics – Costs in manufacturing – Break-even analysis.

UNIT II: **AUTOMATED FLOW LINES** **10 Hrs**

Transfer mechanism - Buffer storage – Analysis of transfer lines - Automated assembly systems.

UNIT III: **NUMERICAL CONTROL AND ROBOTICS** **10 Hrs**

NC-CNC – Part programming – DNC – Adaptive control – Robot anatomy – Specifications – End effectors – Sensors - Robot cell design – CAD/CAM.

UNIT IV: **AUTOMATED HANDLING AND STORAGE** **10 Hrs**

Automated material handling systems – AS/RS – carousel storage – Automatic data capture – bar code technology

UNIT V: **MANUFACTURING SUPPORT SYSTEMS** **10 Hrs**

Product design and CAD, CAD/CAM and CIM, Computer aided process planning- variant and generative approaches, Concurrent engineering and design for manufacture, Lean production, Agile manufacturing.

MME18IE09   SYSTEMS SCIENCE AND SYSTEMS ENGINEERING   3   0   0   3

OBJECTIVES:
- Study of scientific systems and options to choose the best system basing on analytical models and tools applicable to various industries and for proper management decisions in engineering industries.

UNIT I: SYSTEMS SCIENCE CONCEPTS   10 Hrs
System as a function of system-hood and thing-hood, Systems thinking, Evolution of systems movement, Framework of deductive and inductive approaches, classification systems models, Methodological paradigms, Laws of systems science, Organized complexity, Systems simplification

UNIT II: SYSTEMS ENGINEERING PROCESSES   10 Hrs
Life cycles-Phases-Steps, Formulation of Issues: Problem Identification – Scoping – Bounding, Problem definition – Identification of needs, alterables, constraints; Value System Design: Objectives and objective measures; Generation of Alternatives/ system synthesis – Identification of activities and activity measures; Functional decomposition and analysis
Tools: Objectives hierarchies – trees, cross interaction matrix; Functional analysis approaches – SADT, DFD, CFD, FFBD, ICOM, Node tree, Context diagram, decomposition; BPR, QFD, Brain storming, Brain writing, Groupware, Delphi, Morphological box

UNIT III: ANALYSIS OF ALTERNATIVES   10 Hrs
Uncertain/ Imperfect information; Cross-impact analysis, Hierarchical inference, logical reasoning inference; Structural modeling; System Dynamics;
Tools: Coupled uncoupled events – Baye's model – event trees, Causal loop diagram, probability trees; Structural models – Tree structures, reachability graph and matrix, Causal loop diagrams, influence diagrams, decision trees; System Dynamic Models – population models, urban dynamics, world dynamic models; Economic models

UNIT IV: INTERPRETATION OF ALTERNATIVES AND DECISION MAKING   10 Hrs
Types of decisions – descriptive, prescriptive, normative; Decision assessment efforts types – under certainty, probabilistic uncertainty, probabilistic imprecision, information imperfection, conflict and cooperation; Prescriptive normative decision assessments; Utility theory; Group decision making, Game Theory

UNIT V: SYSTEMS ENGINEERING MANAGEMENT CONCEPTS   5 Hrs
Organizational structures, SE management plan; Network based systems planning and management methods; Cognitive factors in SE.

                                                                Total no. of hrs: 45

MME18IE10   **PROJECT MANAGEMENT**   **3   0   0   3**

OBJECTIVES:
  ➢ Handling of Projects with proper planning and control and close monitoring to avoid wastage of inputs, risks, losses are to be studied with mathematical tools and standard software programs.

UNIT I: STRATEGIC MANAGEMENT AND PROJECT SELECTION   **9 Hrs**

Project selection models, Project portfolio process, Analysis under uncertainty, Project organization, Matrix organization

UNIT II: PROJECT PLANNING   **9 Hrs**

Work breakdown structure, Systems integration, Interface coordination, Project life cycle, Conflict and negotiation,

UNIT III: PROJECT IMPLEMENTATION   **12 Hrs**

Estimating Project Budgets, Process of cost estimation, Scheduling: Network Techniques PERT and CPM, Risk analysis using simulation, CPM- crashing a project, Resource loading, leveling, and allocation

UNIT IV: MONITORING AND INFORMATION SYSTEMS   **9 Hrs**

Information needs and the reporting process, computerized PMIS, Earned value analysis, Planning-Monitoring-Controlling cycle, Project control: types of control processes, design of control systems, control of change and scope

UNIT V: PROJECT AUDITING   **6 Hrs**

Construction and use of audit report, Project audit life cycle, Essentials of audit and evaluation, Varieties of project termination, the termination process, The Final Report – A project history

Total no. of hrs: 45

MME18IE11 **INDUSTRIAL SAFETY AND HYGIENE** 3 0 0 3

OBJECTIVES:

- For bringing high awareness for ensuring safe operations in industries, by appraisal of various factors involved in occupation of the employees and implementing the safety measures adopting cost-effective methods.

UNIT I: OPERATIONAL SAFETY 9 Hrs

Hot metal operation, boiler, pressure vessels – heat treatment shop – gas furnace operation – electroplating – hot bending pipes – safety in welding and cutting, Cold – metal operation – safety in machine shop – cold bending and chamfering of pipes- metal cutting – shot blasting, grinding, painting – power press and other machines. Management of toxic gases and chemicals – industrial fires and prevention – road safety – highway and urban safety – safety of sewage disposal and cleaning – control of environmental pollution – managing emergencies in industries – planning security and risk assessments, on – site and off site. Control of major industrial hazards.

UNIT II: SAFETY APPRAISA L AND ANALYSIS 9 Hrs

Human side of safety – personal protective equipment – causes and cost of accidents. Accidents prevention program – specific hazard control strategies – HAZOP training and development of employees – first aid – fire fight devices – accident reporting, investigation. Measurement of safety performance, accident reporting and investigation – plant safety inspection, job safety analysis – safety permit procedures. Product safety – plant safety rules and procedures – safety sampling – safety inventory systems. Determining the cost effectiveness of safety measurement.

UNIT III: OCCUPATIONAL HEALTH 9 Hrs

Concept and spectrum of health functional units and activities of operational health service – occupational and related disease – levels of prevention of diseases – notifiable occupational diseases Toxicology Lead – Nickel, chromium and manganese toxicity – gas poisoning (such as CO, Ammonia Chlorise, So2, H2s.) their effects and prevention – effects of ultra violet radiation and infrared radiation on human system.

UNIT IV: SAFETY AND HEALTH REGULATIONS 9 Hrs

Safety and health standards – industrial hygiene – occupational diseases prevention welfare facilities. The object of factories act 1948 with special reference to safety provisions, model rules 123a, history of legislations related to safety – pressure vessel act – Indian boiler act – the environmental protection act – electricity act – explosive act.

UNIT V: SAFETY MANAGEMENT 9 Hrs

Evaluation of modern safety concepts – safety management functions – safety organization, safety department- safety committee, safety audit – performance measurements and motivation – employee participation in safety - safety and productivity.

Total no. of hrs: 45

MME18IE13   LOGISTICS AND DISTRIBUTION MANAGEMENT   3   0   0   3

OBJECTIVES:
- Study of economical safe transportation and efficient distribution methods by selecting proper logistic models as applicable to different industries. Knowledge of global issues in diverse transportation areas and inferences to improve governing of logistics to be studied.

UNIT I: INTRODUCTION TO LOGISTICS MANAGEMENT   5 Hrs

Logistics Management: Definition of logistics and the concepts of logistics. Logistics Activities: Functions of the logistics system – transportation, warehousing, order processing, information handling and procurement

UNIT II: DISTRIBUTION MANAGEMENT   10 Hrs

Distribution Management, Outbound logistics, Facility location, Classical location problems, Strategic planning models for location analysis, location models, multi objective analysis of location models.

UNIT III: TRANSPORTATION MANAGEMENT   10 Hrs

Transportation alternatives and technologies; transportation performance analysis; total transportation cost analysis; fleet development and management; fleet performance indicators; routing and scheduling; shipment planning; vehicle loading; transportation management and information systems requirements.

UNIT IV: LOGISTICS MODELLING   10 Hrs

Logistics Customer Service, Modeling logistics systems, Simulation of logistic systems, cost effective distribution strategies, Value of information in logistics, E-logistics, risk pooling effect, International and global issues in logistics, Integrated functional activities in logistics, Role of government in international logistics and Principal characteristics of logistics in various countries and regions

UNIT V: LOGISTICS IN DIFFERENT INDUSTRIES   10 Hrs

Logistics in different industries: Third party, and fourth party logistics, Reverse logistics,Airline Schedule Planning, Railway Networks, Postal services, the maritime industries, health care industry and other service industries

Total no. of hrs: 45

MBA18AE04   MANAGEMENT ACCOUNTING &   **3 0 0 3**
FINANCIAL MANAGEMENT

OBJECTIVES:

- Accounting methods for financial management to ensure a proper budgeting and performance of industries and avoiding financial risks are to be studied. Best financial decisions can be made in terms of capital investment and current assets.

UNIT I: FINANCIAL ACCOUNTING   **10 Hrs**

Salient features of Balance sheet and Profit & Loss Statement, Cash Flow and Fund Flow Analysis, Working Capital management, Inventory valuation, Financial Ratio analysis – Depreciation.

UNIT II: COST ACCOUNTING   **10 Hrs**

Cost accounting systems: Job costing, Process costing, Allocation of overheads, Activity based costing, differential cost and incremental cost, Variance analysis, Software costing.

UNIT III: BUDGETING   **10 Hrs**

Requirements for a sound budget, fixed budget-preparation of sales and production budget, flexible budgets, zero base budgeting and budgetary Control.

UNIT IV: FINANCIAL MANAGEMENT   **10 Hrs**

Investment decisions – Capital Investment process, types of investment proposals, investment appraisal techniques – pay back period method, Accounting rate of return, net present value method, internal rate of return and profitability index method.

UNIT V: FINANCIAL DECISIONS   **5 Hrs**

Cost of Capital – Capital structure – Dividend Policy – Leasing.

                                                             Total no. of hrs   : 45

MCS18AE02   **APPLIED OBJECT ORIENTED PROGRAMMING**   **3 0 0 3**

OBJECTIVES:
- Arriving at optimal methods for functioning of industries using the available resources and improvement of resources by observing the simulated results using computer software programs, with various input parameters.

UNIT I: FUNDAMENTALS OF OBJECT ORIENTED PROGRAMMING   **5 Hrs**

Elements of OOP, classes, subjects, messaging, inheritance, polymorphism, OOP paradigm versus procedural paradigm, object-oriented design.

UNIT II: **C++ Basics**   **15 Hrs**

Expression and statements, operators, precedence, type conversion, control statements, loops, Arrays structures, functions, argument passing, reference argument, overloaded function.

UNIT III: **C++ CLASS**   **5 Hrs**

Definition, class objects, member functions, , class argument, , operator overloading, user defined conversions.

UNIT IV: **CLASS DERIVATION**   **10 Hrs**

Derivation specification, public and private base classes, standard conversions under derivation, class scope, initialization and assignment under derivation.

UNIT V: **APPLICATION**   **10 Hrs**

OOP's applications in Industrial Engineering.

MCS18AE03   **SYSTEMS ANALYSIS AND DESIGN**   **3 0 0 3**

OBJECTIVES:
- Design of Object oriented Systems by models, diagrams basing on available database for various activities in industries, which should be feasible and economically viable are to be practiced.

UNIT I: SYSTEMS ANALYSIS FUNDAMENTALS   **9 Hrs**

Information systems analysis overview, Classification of information systems, Systems development life cycle, Role of systems analyst, and Role of case tools

UNIT II: INFORMATION REQUIREMENT ANALYSIS   **9 Hrs**

Sampling and investigating hard data, Interviewing, Using Questionnaires, Developing prototype, System requirements specification, Feasibility analysis

UNIT III: THE ANALYSIS PROCESS   **9 Hrs**

Data flow diagrams, Data dictionary, Process specifications, Presenting the systems proposal

UNIT IV: THE ESSENTIALS OF DESIGN   **9 Hrs**

Designing effective output, designing the database, designing the user interface,   Designing data entry procedures

UNIT V:SOFTWARE ENGINEERING AND IMPLEMENTATION   **9 Hrs**

Quality assurance through software engineering, Implementation approaches, Implementing distributed systems, Object oriented systems analysis and design

Total no. of hrs: 45
