M.Tech – CAD/CAM
(PART TIME)

CURRICULUM
AND
SYLLABUS

REGULATION: 2018

DECLARATION

I, **Dr.M.Ganesan**, Head of Mechanical Engineering Department, hereby declare that this copy of the syllabus (M.Tech – CAD/CAM Part time 2018 Regulation) is the final version which is being taught in the class and uploaded in our University website. I assure that the Syllabus available in our University website is verified and found correct. The Curriculum and Syllabi have been ratified by our Academic Council/Vice Chancellor.

Date: **Signature**

Dr.M.G.R.
Educational and Research Institute
(DEEMED TO BE UNIVERSITY)
(An ISO Certified Institution)
University with Graded Autonomy Status
Maduravoyal , Chennai - 600 095

M.Tech – CAD/CAM
M.Tech – CAD/CAM (Part Time)
Curriculum and Syllabus
2018 Regulation

I SEMESTER						
S.No	**Subject Code**	**Title of Subject**	**L**	**T**	**P**	**C**
1	MMA18002	Applied Mathematics for Design Engineers	3	1	0	4
2	MME18DE06	Product Design and Development Strategies	3	1	0	4
3	MME18D004	Design for Manufacturing and Assembly	3	1	0	4
4	MME18D009	Advanced Strength of Materials	3	1	0	4
		TOTAL	**12**	**4**	**0**	**16**

II SEMESTER						
S.No	**Subject Code**	**Title of Subject**	**L**	**T**	**P**	**C**
1	MME18C001	Computer Integrated Manufacturing Systems	3	0	0	3
2	MME18C002	Manufacturing Information Systems	3	0	0	3
3	MME18C003	Computer Aided Design	3	0	0	3
4	MME18DL01	Design Analysis Lab	0	0	4	2
		TOTAL	**9**	**0**	**4**	**11**

III SEMESTER						
S.No	**Subject Code**	**Title of Subject**	**L**	**T**	**P**	**C**
1	MME18D003	Advanced Finite Element Analysis	3	1	0	4
2	MME18DE07	Robotics and Sensors	3	0	0	3
3	MME18C004	Computer Aided Process Planning	3	0	0	3
4	MME18CL01	CAM Laboratory	0	0	4	2
		TOTAL	**9**	**1**	**4**	**12**

IV SEMESTER						
S.No	**Subject Code**	**Title of Subject**	**L**	**T**	**P**	**C**
1	MME18DE02	Optimization in Design	3	1	0	4
2	MME18XXXX	Elective I (CAD)	3	1	0	4
3	MME18XXXX	Elective II (CAD)	3	1	0	4
		TOTAL	**9**	**3**	**0**	**12**

V SEMESTER						
S.No	**Subject Code**	**Title of Subject**	**L**	**T**	**P**	**C**
1	MME18DE09	Mechatronics in Manufacturing Systems	3	0	0	3
2	MME18XXXX	Elective III (CAM)	3	0	0	3
3	MME18XXXX	Elective IV (CAM)	3	0	0	3
4	MME18CL02*	Project Phase I	0	0	6	3

M.Tech – CAD/CAM

VI SEMESTER						
S.No	**Subject Code**	**Title of Subject**	**L**	**T**	**P**	**C**
1	MME18CL03*	Project Phase II*	0	0	24	12
		TOTAL	**0**	**0**	**24**	**12**

Note: Out of 4 Electives, 2 are to be taken from CAD area and 2 from CAM area.

*Student should have presented a paper on the project area in National or International conference/Journals and should attach the certificate in proof and the published paper in the project report.

TOTAL NO. OF CREDITS : 75

List of Electives CAD						
S.No	**Subject Code**	**Title of Subject**	**L**	**T**	**P**	**C**
1	MME18DE03	Computational Fluid Dynamics	3	1	0	4
2	MME18DE04	Tribology in Design	3	1	0	4
3	MME18DE05	Advanced Machine Tool Design	3	1	0	4
4	MME18D007	Advanced Mechanism Design	3	1	0	4
5	MME18D008	Mechanical Vibrations	3	1	0	4
6	MME18D012	Design of Material Handling Equipments	3	1	0	4
7	MME18CE01	Design of Mechanical Drives	3	1	0	4
8	MME18CE01	Limits, Fits, Tolerances and Surface Finish	3	1	0	4

List of Electives CAM						
S.No	**Subject Code**	**Title of Subject**	**L**	**T**	**P**	**C**
1	MME18CE02	Data Communication in CAD/CAM	3	0	0	3
2	MME18CE03	Manufacturing System and Simulation	3	0	0	3
3	MME18CE04	Performance Modeling and Analysis of manufacturing System	3	0	0	3
4	MME18CE05	Applied Materials Engineering	3	0	0	3
5	MME18CE06	Flexible Competitive manufacturing system	3	0	0	3
6	MME18CE07	Metrology and Non Destructive Testing	3	0	0	3
7	MME18CE08	Concurrent Engineering	3	0	0	3
8	MME18CE02	Nanotechnology	3	0	0	3

MMA18002 APPLIED MATHEMATICS FOR DESIGN ENGINEERS 3 1 0 4

OBJECTIVES: At the end of this course the student will learn

- Analytical functions and different transform methods
- To solve the differential equations using finite difference methods

(Common to I yr. / I Sem. M.Tech(Full Time) – Mechanical(Design, CAD-CAM))
[2018 batch onwards]

UNIT I NUMERICAL SOLUTIONS TO ALGEBRAIC EQUATIONS (12 hrs)

Systems of linear equations: Gauss Elimination method, pivoting techniques, Thomas algorithm for tridiagonal system – Jacobi, Gauss Seidel, SOR iteration methods - Systems of nonlinear equations: Fixed point iterations, Newton Method, Eigenvalue problems: power method, inverse power method- Faddeev – Leverrier Method.

UNIT II NUMERICAL SOLUTIONS TO DIFFERENTIAL EQUATIONS (12 hrs)

Runge Kutta Methods for system of IVPs, numerical stability, Adams-Bashforth multistep method, solution of stiff ODEs, BVP: Shooting method, Direct method, Orthogonal collocation method, Orthogonal collocation with finite element method, Galerkin finite element method.

UNIT III FINITE DIFFERENCE METHODS FOR PARABOLIC EQUATIONS (12 hrs)

Parabolic equations: explicit and implicit finite difference methods, weighted average approximation - Dirichlet and Neumann conditions – Two dimensional parabolic equations – ADI method.

UNIT IV FINITE DIFFERENCE METHODS FOR HYPERBOLIC EQUATIONS (12 hrs)

First order hyperbolic equations – method of characteristics, different explicit and implicit methods; numerical stability analysis, method of lines – Wave equation: Explicit scheme- Stability of above schemes.

UNIT V FINITE DIFFERENCE METHODS FOR ELLIPTIC EQUATIONS (12 hrs)

Laplace and Poisson's equations in a rectangular region: Five point finite difference schemes, Leibmann's iterative methods, Dirichlet and Neumann conditions – Laplace equation in polar coordinates: finite difference schemes – approximation of derivatives near a curved boundary while using a square mesh.

Total no. of hrs: 60

MME18DE06 PRODUCT DESIGN AND DEVELOPMENT STRATEGIES 3 1 0 4

OBJECTIVE: The student will learn

- Product design considerations and strategies of innovative product development

UNIT I: INTRODUCTION **12 Hrs**

Essential factors of product design- requirements of good design- factors affecting product design- product development process tools- Design by evolution and innovation- Asimow's model- Journeys in product development- product engineering – nature and scope- Product design practice in industry.

UNIT II: CREATIVITY **12 Hrs**

\Creative thinking and organizing for product innovation criteria – method and tools for directed creativity – challenges of quality management – Case studies – Mumbai's Dabbawalas – creativity by less learned- Creativity on wheel chair – MARICO (case study)- Patent –design patents- patent application steps – sale of patent rights.

UNIT III: DESIGN CONSIDERATIONS **12 Hrs**

Functional and production design – form design – influence4 of basic design, mechanical loading and material on form design – Design for manufacture and assembly – Design for robustness – Design for production – Design for stiffness and rigidity – strength consideration in product design – optimization in design – Project analysis – Mechanical estimating and costing.

UNIT IV: PRODUCT DEVELOPMENT STRATEGIES **12 Hrs**

Planning and preparation – Resources – Talent –striving, thinking, relating – Quality assurance in product design – Strategy for product development – Case studies.

UNIT V: HUMAN AND VALUE ENGINEERING **12 Hrs**

Human beings as applicator of forces – Anthropometry – design of controls and displays – man/machine information exchange – aesthetic and ergonomic considerations – Value engineering – maximum value-Normal degree of value – value analysis of job plan – Idea generation check-list – Cost reduction through value engineering case study on tap switch control assembly – Economic factors influencing design – Material and process selection

MME18D004 DESIGN FOR MANUFACTURING AND ASSEMBLY 3 1 0 4

OBJECTIVE: The student will learn

- requirements of designing to ease manufacturing and assembly

UNIT I: INTRODUCTION **12 Hrs**

General design principles for manufacturability - strength and mechanical factors, Process capability - Feature tolerances - Geometric tolerances - Assembly limits -Datum features - Tolerance stacks.

UNIT II: FORM DESIGN - CASTING **12 Hrs**

Production methods on form design - Casting considerations - Requirements and rules - Redesign of components for castings and Case studies.

UNIT III: FORM DESIGN - FORGING **12 Hrs**

Forging considerations - Requirements and rules - Redesign of components for forging and Case studies.

UNIT IV: FORM DESIGN - MACHINING **12 Hrs**

Machining considerations - Requirements and rules -Redesign of components for Machining and Case studies.

UNIT V: DESIGN FOR ASSEMBLY METHODS **12 Hrs**

Approaches to design for assembly - Qualitative evaluation procedures, knowledge based approach, Computer aided DFA methods. Assemblability measures. Boothroyd - Dewhurst DFA method - Redesign of a simple product - Case studies.

M.Tech – CAD/CAM

MME18D009 ADVANCED STRENGTH OF MATERIALS 3 1 0 4

OBJECTIVE: The student will learn

- Behaviour of the material under different types of loads

UNIT I: INTRODUCTION 12 Hrs

Load-Stress and Load-Deflection, Stress-strain relations, Failure and limits on design Theories of Stress and Strain- Definition of stress at a point, Stress notation, Symmetry of the stress array and stress on an arbitrarily oriented plane, Transformation of stress, Principal stresses, Differential equations of a deformable body, Deformation of a Deformable body, Strain Theory, Transformation of strain, Principal strains, Small displacement theory, Strain measurement

UNIT II: TORSION 12 Hrs

Torsion of Prismatic bar of circular cross section, Saint-Venant's semi inverse method, Linear elastic solution, Narrow rectangular cross section, Hollow thin-wall torsion members, Multiply connected cross section, Thin wall torsion members with restrained ends, Numerical solution of torsion problems

UNIT III: BENDING 12 Hrs

Definition of shear center in bending, Symmetrical and non-Symmetrical bending, Bending stresses in beams subjected to non-Symmetrical bending, Deflections of straight beams subjected to non-Symmetrical bending, Effect of Inclined loads

UNIT IV: CURVED BEAMS 12 Hrs

Introduction, Circumferential stresses in a curved beam, Radial stresses in curved beams, Correction of circumferential stresses in curved beams, Deflection of curved beams, statically indeterminate curved beams, closing ring subjected to a concentrated load

UNIT V: CONTACT STRESSES 12 Hrs

Introduction, the problem of determining contact stresses, Geometry of the contact surface, Notation and meaning of terms, Expressions for Principal stresses, Method of computing contact stresses, Deflection of bodies in point contact, Stress for two bodies in line contact, Loads normal to contact area and Tangent to contact area , Problems

M.Tech – CAD/CAM

MME18C001 COMPUTER INTEGRATED MANUFACTURING SYSTEMS 3 0 0 3

OBJECTIVE: The student will learn

- Computer integrated planning and manufacturing systems

UNIT I: INTRODUCTION **9 Hrs**

Modern Manufacturing – Sequence of functions in Computer Integrated Manufacturing – Elements of CIM system – The CIM Wheel – CIM- DBMS –LAN-WAN– Benefits of CIM

UNIT II: GROUP TECHNOLOGY **9 Hrs**

Introduction – Part families – PFA – Parts Classifications and Coding – Machine Cells – Coding Systems – Economics of GT – Benefits of GT – Applications, Advantages, Disadvantages of GT

UNIT III: COMPUTER AIDED PROCESS PLANNING & PLANNING CONTRO **9 Hrs**

Role of Process Planning – Approaches to Process planning – Process planning systems – Benefits of CAPP. Production control function – Business Planning - MRP

9 Hrs

UNIT IV: COMPUTER AIDED QUALITY CONTROL

QC – Computer Aided Quality Control – Automated inspection principles and methods – Computer Aided Inspection – Computer Aided Testing- Integration of CAQC with CAD/CAM

UNIT V: FLEXIBLE MANUFACTURING SYSTEMS **9 Hrs**

Introduction – Elements of Flexible Manufacturing Systems – Classification, Operational aspects of FMS – Types of FMS – Work Stations Layout – Material Handling equipment – Analysis, applications of FMS

Total No. of Hrs : 45

M.Tech – CAD/CAM

MME18C002 MANUFACTURING INFORMATION SYSTEMS 3 0 0 3

OBJECTIVE: The student will learn

- Management information database used for manufacturing

UNIT I: INTRODUCTION 9 Hrs

The evolution of order policies, from MRP to MRP II. The role of production organization. operations control

UNIT II: DATABASE 9 Hrs

Terminologies-Entities and attributes-Data models, schema and subschema-Data Independence-ER Diagram-Trends in Database

UNIT III: DESIGNING DATA BASE 9 Hrs

Hierarchical model-Network approach-Relational data model-Concepts, Principles, keys, relational operations functional dependence-Normalization, types-Query languages

UNIT IV: MANUFACTURING CONSIDERATION 9 Hrs

The product and its structure, Inventory and process flow-Shop floor control-Data structure and procedure-Various model, the order-scheduling module. Input/output analysis module the stock status database-The complete IOM Database.

UNIT V: INFORMATION SYSTEM FOR MANUFACTURING 9 Hrs

Parts oriented production information system-Concepts and structure-Computerized production Scheduling, online production controlsystems, computer based production management system, computerized manufacturing information system - case study.

Total No. of Hrs : 45

MME18C003 **COMPUTER AIDED DESIGN** **3 0 0 3**

OBJECTIVE: The student will learn

- Use of computers in design of components and assembly

UNIT I: INTRODUCTION TO COMPUTER AIDED DESIGN **11 Hrs**

The design process-Application of computers in design-typical CAD System-CAE-Benefits of CAD-Concept of CAD as drafting and designing facility-drawing features in CAD-Translation, rotation, scaling-Layering-CAD Hardware-Design workstation-Graphic Terminal-Operator input devices-Output devices-CPU

UNIT II: INTERACTIVE COMPUTER GRAPHICS **12 Hrs**

Creation of Graphic primitives-Output primitives(Points,Lines,Curves)- Windowing, view ports-Clipping transformation- Data exchange standards-Geometric modelling- Wireframe, Surface, Solid Modelling –Data Structures-Engineering Data Management System-Hierarchical,Network,Relational data structure

UNIT III: VISUAL REALISM **7 Hrs**

Fundamentals -rendering techniques-lines and shaded images, dynamics, stereopsis, Improved display, aliasing and ant-aliasing.

UNIT IV: ASSEMBLY OF PARTS **8 Hrs**

Assembly of parts, tolerance analysis, mass property calculations, mechanisms simulation.

UNIT V: SOLID MODELING **7 Hrs**

Solid modeling- Rapid Prototyping -CSG and B-REP Techniques-Features of Solid Modeling Packages- Case Studies

Total No. of Hrs : 45

M.Tech – CAD/CAM

MME18DL01 **DESIGN ANALYSIS LAB** **0 0 4 2**

OBJECTIVE: The student will learn

- Design , modelling and analysis using computer software and tools

I. MODELLING:

- Introduction to modelling techniques- Type of modelling- wire frame, surface and solid modelling— constructive solid modelling and B-rep modelling- Feature based and parametric modelling etc.
- Generation of surfaces of revolution, surfaces of extrusion, surfaces by skinning operation etc.
- Creation of different views-importing models from other softwares-Data base management.

(Exercises will be given using packages like PROE/CATIA/Unigraphics etc.)

II. ANALYSIS:

- Introduction to FEM-Analysis software – ANSYS / NASTRAN/NISA/COSMOS/I-DEAS etc.
- Structural and fluid analysis.-One dimensional, two dimensional and Three dimensional Elements Based Problems.
- Thermal Analysis-Conduction, Convection and Radiation heat transfer Problems.

III. MATLAB:

- Introduction to MATLAB
- Study of different MATLAB tools
- Arithmetic and logical operators
- Matrix operation using MATLAB
- Mathematical equations solution
- Generation of trigonometrically wave functions
- Introduction to SIMULINK
- Flow control statements and graphs

Total No. of Hrs : 60

M.Tech – CAD/CAM

MME18D003 ADVANCED FINITE ELEMENT ANALYSIS 3 1 0 4

OBJECTIVE: The student will learn

- Formulation and modelling of a problem and analyzing the dynamic, fluidics and heat transfer problems

UNIT I: BENDING OF PLATES AND SHELLS 12 Hrs

Review of Elasticity Equations-Bending of Plates and Shells-Finite Element Formulation of Plate and Shell Elements-Conforming and Non Conforming Elements - Co and C1 Continuity Elements-Application and Examples

UNIT II: NON-LINEAR PROBLEMS 12 Hrs

Introduction-Iterative Techniques-Material non-Linearity-Elasto Plasticity-Plasticity-Visco plasticity-Geometric Non linearity-large displacement Formulation-Application in Metal Forming Process and contact problems

UNIT III: DYNAMIC PROBLEM 12 Hrs

Direct Formulation - Free, Transient and Forced Response - Solution Procedures-Subspace Iterative Technique -Houbolt, Wilson, Newmark - Methods - Examples

UNIT IV: FLUID MECHANICS AND HEAT TRANSFER 12 Hrs

Governing Equations of Fluid Mechanics-Inviscid and Incompressible Flow-Potential Formulations-Slow Non-Newtonian Flow-Metal and Polymer Forming-Navier Stokes Equation-Steady and Transient Solutions.

UNIT V: ERROR ESTIMATES AND ADAPTIVE REFINEMENT 12 Hrs

Error norms and Covergence rates- high refinement with adaptivity-Adaptive refinement

Total No of Hrs : 60

M.Tech – CAD/CAM

MME18DE07 **ROBOTICS AND SENSORS** **3 0 0 3**

OBJECTIVE: The student will learn

- Concepts, design, application and control of robotics

UNIT I: INTRODUCTION **9 Hrs**

Basic concepts-Robot anatomy-robot configurations-Basic Robot motions-Types of drives-Applications Material Handling-Processing-Assembly and Inspection -Safety considerations.

UNIT II: TRANSFORMATIONS AND KINEMATICS **9 Hrs**

Vector operations-Translational transformations and Rotational transformations-Properties of transformation Matrices-Homogeneous transformations and Manipulator-Forward solution-Inverse solution

UNIT III: CONTROLS AND END EFFECTORS **9 Hrs**

Control system concepts-Analysis-control of joints-Adaptive and optimal control-End effectors-Classification-Mechanical-Magnetic-Vacuum-Adhesive-Drive systems-Force analysis and Gripper design

UNIT IV: ROBOT PROGRAMMING **6 Hrs**

Methods -Languages-Computer control and Robot Software-VAL system and Language

UNIT V: SENSORY DEVICES **12 Hrs**

Non-optical and optical position sensors-Velocity and Acceleration-Range-Proximity-touch-Slip-Force-Torque-Machine vision-Image components-Representation - Hardware-Picture coding-Object recognition and Categorization-Software consideration- Case Studies

M.Tech – CAD/CAM

MME18C004 COMPUTER AIDED PROCESS PLANNING 3 0 0 3

OBJECTIVE: The student will learn

- Process planning and usage of computers in process planning

UNIT I: INTRODUCTION 5 Hrs

The Place of Process Planning in the Manufacturing cycle-Process planning and production Planning-Process planning and Concurrent Engineering, CAPP, Group Technology

UNIT II: PART DESIGN REPRESENTATION 10 Hrs

Design Drafting-Dimensioning-Conventional Tolerancing-Geometric Tolerancing-CAD-input/output devices- Topology-Geometric transformation-Perspective transformation-Data Structure-Geometric modelling for process planning--GT Coding-The OPITZ system-The MICLASS System

UNIT III: PROCESS ENGINEERING AND PROCESS PLANNING 10 Hrs

Experienced based planning-Decision table and Decision trees-Process capability analysis-Process planning- Variant process planning-Generative approach-Forward and backward planning, Input format, Al.

UNIT IV: COMPUTER AIDED PROCESS PLANNING SYSTEMS 10 Hrs

Logical Design of process planning - Implementation considerations-Manufacturing system components, Production Volume, No. of production families - CAM-I, CAPP, MIPLAN, APPAS, AUTOPLAN and PRO, CPPP

UNIT V: AN INTERGARTED PROCESS PLANNING SYSTEMS 10 Hrs

Totally integrated process planning systems-An Overview-Modulus structure-Data Structure-Operation- Report Generation, Expert process planning

Total No. of Hrs: 45

M.Tech – CAD/CAM

MME18CL01 **CAM LABORATORY** **0 0 4 2**

OBJECTIVE: The student will learn

- Practically the method of writing programs for machining operations

- Practice in part programme and operation of a turning center.
- Diagnosis and trouble shooting in CNC machine.
- Practice in part programming and operations of a machine center.
- Tool planning and selection for machining center/turning center.
- Programming using CAD based software.
- Practice in APT based NC programming languages
- Practice in robot programming and its languages
- Preparation of various reports and route sheets.
- Simulation of a manufacturing system.

Total No. of Hrs : 60

M.Tech – CAD/CAM

MME18DE02 OPTIMIZATION IN DESIGN 3 1 0 4

OBJECTIVE: The student will learn

- Optimization techniques and its application in design and manufacturing

UNIT I: CLASSICAL OPTIMIZATION TECHNIQUES 12 Hrs

Single variable optimization with and without constraints, Multi–variable optimization without constraints, multi–variable optimization with constraints– method of Lagrange multipliers, Kuhn-Tucker conditions.

UNIT II: NUMERICAL METHODS FOR OPTIMIZATION 12 Hrs

Nelder Mead's Simplex search method, Gradient of a function, steepest descent method, Newton's method, types of penalty methods for handling constraints.

UNIT III: GENETIC ALGORITHM (GA) 12 Hrs

Differences and similarities between conventional and evolutionary algorithms, working principle, reproduction, crossover, mutation, termination criteria, different reproduction and crossover operators, GA for constrained optimization, draw backs of GA, multi–objective GA, Non-dominated sorted GA, convergence criterion, applications of multi-objective problems.

UNIT IV: APPLICATIONS OF OPTIMIZATION IN DESIGN AND MANUFACTURING SYSTEMS 12 Hrs

Some typical applications like optimization of path synthesis of a four-bar mechanism, minimization of weight of a cantilever beam, optimization of springs and gears, general optimization model of a machining process, optimization of arc welding parameters, and general procedure in optimizing machining operations sequence.

UNITV: INTRODUCTION TO NEURAL NETWORKS 12 Hrs

Introduction, Humans and Computers, Organization of the Brain, Biological Neuron, Biological and Artificial Neuron Models, Hodgkin-Huxley Neuron Model, Integrate and- Fire Neuron Model, Spiking Neuron Model, Characteristics of ANN, McCulloch- Pitts Model, Historical Developments, Potential Applications of ANN.

Total No. of Hrs : 60

MME18DE09 MECHATRONICS IN MANUFACTURING SYSTEMS 3 0 0 3

OBJECTIVE: The student will learn

- Usage of combination of mechanical and electronic systems in manufacturing

UNIT I: INTRODUCTION **8 Hrs**

Introduction to Mechatronics - Systems - Mechatronics in Products - Measurement Systems - Control Systems - Traditional design and Mechatronics Design

UNITN II: SENSORS AND TRANSDUCERS **9 Hrs**

Introduction-Performance terminology-Displacement, position and proximity - Velocity and Motion-Fluid pressure-Temperature sensors - Light sensors - Selection of sensors-Signal processing-Servo systems

UNIT III: MICROPROCESSORS IN MECHATRONICS **12 Hrs**

Introduction-Architecture-Pin configuration-Instruction set-Programming of Microprocessors using 8085 instructions-Interfacing input and output devices-Interfacing D/A Converters and A/D Converters- Applications-Temperature control-Stepper motor control-Traffic light controller

UNIT IV: PROGRAMMABLE LOGIC CONTROLLERS **8 Hrs**

Introduction-Basic structure-input/output processing-programming-Mnemonics Timers, Internal relays and counters-Data handling-Analog input/output-Selection of PLC.

UNIT V: DESIGN OF MECHATRONICS SYSTEM **8 Hrs**

Designing-Possible design solutions-Case studies of Mechatronics systems

Total No. of Hrs : 45

M.Tech – CAD/CAM

MME18CL02 **PROJECT PHASE I** **0 0 6 3**

- Students should select the area of the project work and complete the literature survey.
- Student should identify the problem of study and start the project work.
- Students are expected to do the project work individually.
- A guide will be allotted to each student based on the area of the Project work.
- Project reviews will be conducted once in a fortnight to asses the development of the project work.
- At the end of the semester students should submit a report of the work completed and should appear for a Project Viva-voce examination conducted by the internal examiner.
- Continous assessment mark (50 marks) will be awarded based on the performance in the reviews.
- End semester mark (50 marks) will be awarded based on project viva voce examination.

M.Tech – CAD/CAM

MME18CL03	**PROJECT PHASE II**	**0**	**0**	**24**	**12**

- Students are expected to do a Project work either in an Industry or at the University in the area of specialization individually.
- Each student will be allotted a guide based on the area of Project work
- Number of reviews will be conducted during the semester to monitor the development of project. Students have to submit the thesis at the end of the semester and appear for the Project Viva-Voce examination conducted by one internal examiner and one external examiner.

It is mandatory that the student should have presented his project work as a technical paper in National/international conference /Journals. A copy of the certificate in proof of paper presentation should be enclosed in the project report.

50% weightage (100 marks) will be given for the continuous assessment and 50% weightage (100 marks) for the Project viva a voce examination.

M.Tech – CAD/CAM

MME18DE03 **COMPUTATIONAL FLUID DYNAMICS** **3 1 0 4**

OBJECTIVE: The student will learn

- Formulation and analysis of problems on fluid dynamics

UNIT I: GOVERNING DIFFERENTIAL EQUATIONS AND FDM 12 Hrs

Classification, Initial and Boundary Conditions , Initial and Boundary value problems. Finite Difference Method, Central ,Forward ,Backward Difference, Uniform and Non-uniform Grids, Numerical Errors, Grid Independence Test.

UNIT II: CONDUCTION HEAT TRANSFER 12 Hrs

Steady one-dinensional conduction ,Two and Three dimensional Steady state problems , Transient One dimensional and Two dimensional problems.

UNIT III: INCOMPRESSIBLE FLUID FLOW 12 Hrs

Governing Equations, Stream function – Vorticity Method, Determination of Pressure for Viscous flow, Simple procedure of Patankar and Spalding, Computation of Boundary layer flow, Finite Difference Approach.

UNIT IV: CONVECTION HEAT TRANSFER AND FEM 12 Hrs

Steady One Dimensional and Two Dimensional Convection-Diffusion, Unsteady One Dimensional Convection- Diffusion, Unsteady Two Dimensional Convection – Diffusion – Introduction to Finite Element Method-Solution of Steady Heat Conduction by FEM- Incompressible flow – Simulation by FEM.

UNIT V: TURBULENCE MODELS 12 Hrs

Algebraic models –One Equation model, K-I Models, Standard, High and Low Reynolds Number models, Prediction of Fluid flow and Heat transfer using Standard Codes.

Total No. of Hrs : 60

MME18DE04 TRIBOLOGY IN DESIGN 3 1 0 4

OBJECTIVE: The student will learn

- Influence of behaviour of friction, wear and lubrication on mechanical system design

UNIT I: SURFACES, FRICTION AND WEAR 12 Hrs

Topography of the surfaces - Surface features - Surface interaction - Theory of Friction - Sliding and Rolling Friction, Friction properties of metallic and non-metallic materials - friction in extreme conditions - Wear,types of wear - Mechanism of wear - Wear resistance materials - Surface treatment - Surface modifications -Surface coatings.

UNIT II: LUBRICATION THEORY 12 Hrs

Lubricants and their physical properties, lubricants standards - Lubrication regimes- Hydrodynamic lubrication - Reynolds Equation, thermal, inertia and turbulent effects - Elasto hydrodynamic and plasto hydrodynamic and magneto hydrodynamic lubrication - Hydro static lubrication .

UNIT III: DESIGN OF FLUID FILM BEARINGS 12 Hrs

Design and performance analysis of thrust and journal bearings - Full, partial, fixed and pivoted journal bearings design - Lubricant flow and delivery - power loss, Heat and temperature, rotating loads and dynamic loads in journal bearings - Hydrostatic Bearing design.

UNIT IV: ROLLING ELEMENT BEARINGS 12 Hrs

Geometry and Kinematics - Materials and manufacturing processes - contact stresses - Hertzian stress equation - Load divisions - Stresses and deflection - Axial loads and rotational effects, Bearing life capacity and variable loads - ISO standards - Oil films and their effects - Rolling Bearings Failures.

UNIT V: TRIBO MEASUREMENT IN INSTRUMENTATION 12 Hrs

Surface topography measurements - Electron microscope and friction and wear measurements - Laser method - Instrumentation - International standards - Bearings performance measurements - Bearing vibration measurement.

M.Tech – CAD/CAM

MME18DE05 ADVANCED MACHINE TOOL DESIGN 3 1 0 4

OBJECTIVE: The student will learn

- Designing of different types of machine tools and their drives and controls
- Testing of machine tools under erection and commission.

UNIT I: INTRODUCTION 10 Hrs

Introduction to Metal Cutting Machine tools, Kinematics, Basic Principles of Machine tool design, estimation of drive power.

UNIT II: DESIGN OF MACHINE TOOLS-I 13 Hrs

Design of Machine tool spindle and bearings, Design of power Screws - Static deformation of various machine tool structures - thin walled box structures with open and compliant cross sections – correction coefficients.

UNIT III: DESIGN OF MACHINE TOOLS-II 13Hrs

Design of beds, columns, tables and supports. Dynamics of cutting forces - tool chatter - design of slide ways. Concepts of aesthetics and ergonomics applied to machine tools, latest trends in Machine Tool Design, Introduction to CAD techniques

UNIT IV: DESIGN OF DRIVES AND CONTROL MECHANISMS 17 Hrs

Design considerations of electrical, mechanical and Hydraulic drives in machine tool, stepped and stepless arrangements and systems.
Design of control mechanisms - selection of standard components - Dynamic measurement of forces and vibrations in machine tools - Stability against chatter - use of vibration dampers.

UNIT V: TESTING AND STANDARDISATION 07 Hrs

Acceptance tests and standardization of machine tools - machine tools reconditioning.

Total No. of Hrs : 60

M.Tech – CAD/CAM

MME18D007 ADVANCED MECHANISM DESIGN 3 1 0 4

OBJECTIVE: At the end of this course the student will learn

- Different types of advanced mechanisms analyze and synthesize mechanisms.

UNIT I: INTRODUCTION TO KINEMATICS 12 Hrs

Review of fundamentals of kinematics--Mobility ,kinematic inversion,Graphical position analysis,algegric position analysis,position analysis techniques,displacement difference between two points,rotation and translation,apparent displacement and absolute displacement.

UNIT II: VELOCITY AND ACCELERATON 12 Hrs

Velocity and acceleration of simple and complex mechanisms using graphical method.

UNIT III: SYNTHESIS 12 Hrs

Type , Number and. Dimensional synthesis - Function generation , path generation, body guidance.Two position synthesis of crank and rocker mechanism.Crank and rocker mechanism with optimum transmission angle.Three position synthesis,Four position synthesis,point precision reduction,precision position,structural error,chebychev spacing.

UNIT IV: SYNTHESIS OF LINKAGES 12 Hrs

Coupler curve synthesis, cognate linkages, Robert-Chebychev theorem, Blocks method of synthesis, Freudenstein's equation, Analytical synthesis using complex algebra, Synthesis of dwell mechanisms.

UNIT V: SPATIAL MECHANISM 12 Hrs

Introduction, exception in the mobility of mechanisms, the position analysis problem, Velocity and acceleration analysis.

Total No. of Hrs : 60

M.Tech – CAD/CAM

MME18D008 MECHANICAL VIBRATIONS 3 1 0 4

OBJECTIVE: At the end of this course the student will learn

- Various types of vibration and their analysis

UNIT I: FUNDAMENALS OF VIBRATION 12 Hrs

Review of Single degree freedom systems - Response to aribitrary periodic executions - Duhamel's integral - Impulse response function - Virtual work - Lagrange's equations - Single degree freedom forced vibration with elastically coupled viscous dampers - System identificaton from frequency response - Transient vibration - Laplace transformation formulation.

UNIT II: TWO DEGREE FREEDOM SYSTEM 12 Hrs

Free vibration of spring-coupled system - Mass coupled system - Bending variation of two degree freedom system - Forced vibration - Vibration Absorber - Vibration isolation.

UNIT III: MULTI DEGREE FREEDOM SYSTEM 12 Hrs

Normal mode of vibration - Flexiblity matrix and stiffness matrix - Eigen value and Eigen vector – Orthogonal properties - Modal matrix - Modal analysis - Forced vibration by matrix inversion - Modal damping in forced vibration - Numerical methods of fundamental frequencies.

UNIT IV: VIBRATION OF CONTINUOUS SYSTEMS 12 Hrs

Systems governed by wave equations - Vibration of strings - Vibration of rods - Euler 's equation for beams - Effect of Rotary inertia and shear defomation - Vibration of plates.

UNIT V: EXPERIMENTAL METHODS IN VIBRATION ANALYSIS 12 Hrs

Vibration instruments - Vibration exciters Measuring Devices - Analysis - Vibration Tests - Free and Forced Vibration tests. Examples of vibration tests - Industrial case studies.

Total No. of Hrs : 60

MME18D012 DESIGN OF MATERIAL HANDLING EQUIPMENTS 3 1 0 4

OBJECTIVE: At the end of this course the student will learn

- Design of different types of material handling systems used for engineering and process industries

UNIT I: INTRODUCTION TO MATERIALS HANDLING EQUIPMENT 12 Hrs

Overview-consideration in material handling system design, ten principles of material handling. Types of material handling equipments-trolleys, industrial trucks, AGV, monorails and other rail guided vehicles, conveyors, cranes, hoists and elevators.

UNIT II: DESIGN OF HOISTS 12 Hrs

Design of hoisting elements: Welded and roller chains - Hemp and wire ropes - Design of ropes, pulleys, pulley systems, sprockets and drums, Load handling attachments. Design of forged hooks and eye hooks – crane grabs - lifting magnets - Grabbing attachments - Design of arresting gear - Brakes: shoe, band and cone types.

UNIT III: DRIVES OF HOISTING GEAR 12 Hrs

Hand and power drives - Traveling gear - Rail traveling mechanism - cantilever and monorail cranes - slewing, jib and luffing gear - cogwheel drive - selecting the motor ratings.

UNIT IV: CONVEYORS 12 Hrs

Types - description - design and applications of Belt conveyors, apron conveyors and escalators Pneumatic conveyors, Screw conveyors and vibratory conveyors.

UNIT V: ELEVATORS 12 Hrs

Bucket elevators: design - loading and bucket arrangements - Cage elevators - shaft way, guides, counter weights, hoisting machine, safety devices - Design of fork lift trucks.

Total No. of Hrs : 60

M.Tech – CAD/CAM

MME18CE01 **DESIGN OF MECHANICAL DRIVES** **3 1 0 4**

OBJECTIVE: At the end of this course the student will learn

- Concepts and analysis using computers for various mechanical elements design

UNIT I: INTRODUCTION **12 Hrs**

Phases of design - Standardization and interchangeability of machine elements - Tolerances from process and function - Individual and group tolerances - Selection of fits for different design situations - Design for assembly and modular constructions - Concepts of integration.

UNIT II: SHAFTING **12 Hrs**

Analysis and design of shafts for different applications - detailed design - preparation of production drawings - Integrated design of shaft, bearing and casing - Design for rigidity.

UNIT III: GEARS **12 Hrs**

Principles of gear tooth action - Gear correction - Gear tooth failure modes - Stresses and loads – Component design of spur, helical, bevel and worm gears - Design for sub assembly .

UNIT IV: GEAR BOX **12 Hrs**

Integrated design of speed reducers and multispeed gear boxes - application of software packages.

UNIT V: CLUTCHES & BRAKES **12 Hrs**

Integrated design of automobile clutches and over running clutches. Dynamic and thermal aspects of vehicle braking - Integrated design of brakes for machine tools, automobiles and mechanical handling equipments.

M.Tech – CAD/CAM

MME18CE01 LIMITS, FITS, TOLERANCES AND SURFACE FINISH 3 1 0 4

OBJECTIVES: The student will learn

- To understand and apply the limits, fits and tolerances in design.
- To understand the surface texture and its application in assembly

UNIT I: INTRODUCTION **9** Hrs

Basic concepts of Metrology- -Accuracy & Precision- Errors in measurements- Basic concepts of design for manufacturing and assembly – Need and functions of Inspection – Quality assurance and Quality control in design and development – Use standard parts

UNIT II: LIMITS AND DIMENSIONAL TOLERANCES **12 Hrs**

Limits-Definition, Terminology used in limits and tolerances-Factors considered for deciding the limits-Datum line, Datum surface-Dimensioning and dimensional tolerances – Types – Tolerance stacks-Letter symbols for tolerances – International tolerance grades- Factors to considered for fixing the tolerances – Case Studies

UNIT III: GEOMETRICAL TOLERANCES **12** Hrs

Definition and need – Types **–** Manufacturing methods for achieving the geometrical tolerances **–** Methods of measuring the geometrical tolerances **–** Importance of alignment tests – Case studies

UNITIV: FITS **12** Hrs

Selective assembly and Interchangeability – Hole basis and Shaft basis system- Definition of fit – Types of fits- Symbolic representation of fits- Selection of fits- Taylor's principle of gauging design – Problems-Case studies

UNITV: SURFACE FINISH **15**Hrs

Need for surface finish-Surface texture-Useful definitions-Surface roughness-Terminology for surface roughness as per Indian standards-Symbols & Representation of surface finish-Measurement of surface finish-Comparative method of measurement-Touch inspection, Visual inspection, Microscopic inspection, Surface photography, Reflected light intensity-Direct Instrument measurements- Skid &stylus method, Tomilson's Surface Meter, Taylor-Hobson Talysurf-Assessment of surface roughness-Centre Line Average method, Root Mean Square-Case studies.

M.Tech – CAD/CAM

MME18CE02 DATA COMMUNICATION IN CAD/CAM 3 0 0 3

OBJECTIVE: At the end of this course the student will learn

- Usage of computers for communication of data related to CAD/CAM

UNIT I: DIGITAL COMPUTERS & MICRO PROCESSORS 8 Hrs

Block diagram - register transfer language - arithmetic, logic and shift micro operations - instruction code - training and control instruction cycle - I/O and interrupt design of basic computer., Machine language - assembly language - assembler. Registers ALU and Bus Systems - timing and control signals - machine cycle and timing diagram - functional block diagrams of 80 x 86 and modes of operation. Features of Pentium Processors.

UNIT II: OPERATING SYSTEM & ENVIRONMENTS 9 Hrs

Types - functions - UNIX & WINDOWS NT - Architecture - Graphical User Interfaces.
Compilers - Analysis of the Source program - the phases of a compiler - cousins of the compiler, the grouping of phases - compiler construction tools.

UNIT III: COMMUNICATION MODEL 10 Hrs

Data communication and networking - protocols and architecture - data transmission concepts and terminology - guided transmission media - wireless transmission - data encoding - asynchronous and synchronous communication - base band interface standards RS232C, RS449 interface.

UNIT IV: COMPUTER NETWORKS 10 Hrs

Network structure - network architecture - the OSI reference model services - network standardization - example - Managing remote systems in network - network file systems - net working in manufacturing.

UNIT V: INTERNET 8 Hrs

Internet services - Protocols - intranet information services - mail based service - system and network requirements - internet tools - Usenet - e-mail - IRC - www - FTP - Telnet.

MME18CE03 MANUFACTURING SYSTEM AND SIMULATION 3 0 0 3

OBJECTIVE: The student will learn

- To model and simulate the manufacturing systems

UNIT I: COMPUTER MODELING AND SIMULATION SYSTEMS 8 Hrs

Monte Carlo simulation, Nature of computer modeling and simulation. Limitation of simulation, areas of application. Components of a system - discrete and continuous systems. Models of a system - a variety of modeling approaches

UNIT II: RANDOM NUMBER GENERATION 10Hrs

Techniques for generating random numbers - midsquare method - the mid product method – constant multiplier technique - additive congruential method - linear congruential method - tests for random numbers - the Kolmogorov - Smirnov test - the Chi-Square test.

UNIT III: RANDOM VARIABLE GENERATION 8 Hrs

Inverse transform technique - exponential distribution - uniform distribution - Weibull distribution. Empirical continuous distribution - generating approximate normal variates - Erlang distribution.

UNIT IV: DISTRIBUTION AND EVALUATION OF EXPERIMENTS 10 Hrs

1Discrete uniform distribution - Poisson distribution - geometric distribution - acceptance rejection technique for Poisson distribution gamma distribution. Simulation Experiments - Variance reduction techniques - antithetic variables - verification and validation of simulation models. Variance reduction techniques - antithetic variables - verification and validation of simulation models.

UNIT V: DISCRETE EVENT SIMULATION 9 Hrs

Concepts in discrete-event simulation, manual simulation using event scheduling, single channel queue, two server queue, simulation of inventory problem. Programming for discrete event systems in GPSS - Case studies.

MME18CE04 PERFORMANCE MODELLING AND ANALYSIS OF MANUFACTURING SYSTEM **3 0 0 3**

OBJECTIVE: The student will learn

- Modeling and analyzing the manufacturing systems for its performance

UNIT I: MANUFACTURING SYSTEMS & CONTROL **10 Hrs**

Automated Manufacturing Systems - Modelling - Role of performance modelling - simulation models- Analytical models. Product cycle - Manufacturing automation - Economics of scale and scope - input/output model – plant configurations. Performance measures - Manufacturing lead time - Work in process -Machine utilization - Throughput - Capacity - Flexibility - performability - Quality. Control Systems - Control system architecture - Factory communications - Local area networks - Factory networks - Open systems interconnection model - Net work to network interconnections – Manufacturing automation protocol - Database management system.

UNIT II: MANUFACTURING PROCESSES **10 Hrs**

Examples of stochastic processes - Poisson process Discrete time Markov chain models - Definition and notation - Sojourn times in states - Examples of DTMCs in manufacturing - Chapman - Kolmogorov equation - Steady-state analysis. Continuous Time Markov Chain Models - Definitions and notation - Sojourn times in states - examples of CTMCs in manufacturing - Equations for CTMC evolution - Markov model of a transfer line. Birth and Death Processes in Manufacturing - Steady state analysis of BD Processes - Typical BD processes in manufacturing.

UNIT III: QUEUING MODELS **8 Hrs**

Notation for queues - Examples of queues in manufacturing systems - Performance measures - Little's result - Steady state analysis of M/M/m queue, queues with general distributions and queues with breakdowns - Analysis of a flexible machine center.

UNIT IV: QUEUING NETWORKS **8 Hrs**

Examples of QN models in manufacturing - Little's law in queuing networks - Tandem queue - An open queuing network with feedback - An open central server model for FMS - Closed transfer line - Closed server model - Garden Newell networks.

UNIT V: PETRI NETS **9 Hrs**

Classical Petri Nets - Definitions - Transition firing and reachability - Representational power - properties - Manufacturing models. Stochastic Petri Nets - Exponential timed Petri Nets - Generalized Stochastic Petri Nets - modelling of KANBAN systems - Manufacturing models.

M.Tech – CAD/CAM

MME18CE05 APPLIED MATERIALS ENGINEERING 3 0 0 3

OBJECTIVE: The student will learn

- Different types of materials and their behaviors under various types of loads

UNIT I: ELASTIC AND PLASTIC BEHAVIOUR 10 Hrs

Elasticity in metals and polymers - Mechanism of plastic deformation, role of dislocations, yield stress, shear strength of perfect and real crystals - Strengthening mechanisms, work hardening, solid solution, grain boundary strengthening, poly phase mixture, precipitation, particle, fibre and dispersion strengthening. Effect of temperature, strain and strain rate on plastic behaviors - Super plasticity - Deformation of non crystalline material.

UNIT II: FRACTURE BEHAVIOUR 10 Hrs

Griffith's theory, stress intensity factor and fracture toughness-Toughening mechanisms - Ductile, brittle transition in steel - High temperature fracture, creep - Larson-Miller parameter - Deformation and fracture mechanism maps - Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law -Effect of surface and metallurgical parameters on fatigue - Fracture of non metallic materials - Failure analysis sources of failure, procedure of failure analysis.

UNIT III: SELECTION OF MATERIALS 10 Hrs

Motivation for selection, cost basis and service requirements - Selection for mechanical properties, strength, toughness, fatigue and creep - Selection for surface durability corrosion and wear resistance - Relationship between materials selection and processing - Case studies in materials selection with relevance to aero, auto, marine, machinery and nuclear applications.

UNIT IV: MODERN METALLIC MATERIALS 8 Hrs

Hrsual phase steels, Micro alloyed, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) steel, Marging steel - Intermetallics, Ni and Ti aluminides - Smart materials, shape memory alloys - Metallic glass - Quasi crystal and nano crystalline materials.

UNIT V: NON METALLIC MATERIALS 7 Hrs

Polymeric materials - Formation of polymer structure - Production techniques of fibers, foams, adhesives and coatings - Structure , properties and applications of engineering polymers - Advanced Structural ceramics, WC,Tic,TaC,AI2O3,SiC, Si3N4, CBN and diamond - properties, processing and applications.

MME18CE06 FLEXIBLE COMPETITIVE MANUFACTURING SYSTEM **3 0 0 3**

OBJECTIVE: The student will learn

- Techniques and methods of competitive manufacturing systems

UNIT I: MANUFACTURING IN A COMPETITIVE ENVIRONMENT 9 Hrs

Automation of manufacturing process - Numerical control - Adaptive control - material handling and movement - Industrial robots - Sensor technology - flexible fixturing - Design for assembly, disassembly and service.

UNIT II: GROUP TECHNOLOGY 9 Hrs

Part families - classification and coding -Production flow analysis - Machine cell design - Benefits.

UNIT III: FLEXIBLE MANUFACTURING SYSTEMS 9 Hrs

Introduction - Components of FMS - application work stations - Computer control and functions - Planning, scheduling and control of FMS - Scheduling - knowledge based scheduling - Hierarchy of computer control - Supervisory Computer.

UNIT IV: COMPUTER SOFTWARE, SIMULATION AND DATABASE OF FMS 9 Hrs

System issues - Types of software - specification and selection - Trends - Application of simulation – software - Manufacturing data systems - data flow - CAD/CAM considerations - Planning FMS database.

UNIT V: COMPETITIVE MANUFACTURING 9 Hrs

Characteristics of JIT - Pull method - quality -small lot sizes - work station loads - close supplier ties – flexible work force - line flow strategy - TPM - Kanban system - strategic implications - implementation issues - MRD JIT – Six sigma ,Lean and agile Manufacturing.

MME18CE07 METROLOGY AND NON DESTRUCTIVE TESTING 3 0 0 3

OBJECTIVE: The student will learn

- Various measuring precision instruments and techniques
- Non destructive testing methods

UNIT I: MEASURING SYSTEMS: 9 Hrs

Tool Maker's microscope - Co-ordinate measuring machines - Universal measuring machine - Laser viewers for production profile checks - Image shearing microscope - Use of computers - Machine vision technology - Microprocessors in metrology.

UNIT II: STATISTICAL QUALITY CONTROL 9 Hrs

Data presentation - Statistical measures and tools - Process capability - Confidence and tolerance limits - Control charts for variables and for fraction defectives - Theory of probability - Sampling - ABC standard - Reliability and life testing.

UNIT III: LIQUID PENETRANT AND MAGNETIC PARTICLE TESTS 9 Hrs

Characteristics of liquid penetrants -different washable systems-Developers-applications -Methods of production of magnetic fields - Principles of operation of magnetic particle test -Applications – Advantages and Limitations.

UNIT IV: RADIOGRAPHY 9 Hrs

Sources of ray-x-ray production - properties of d and x rays- film characteristics - exposure charts - contrasts - operational characteristics of x ray equipment - applications.

UNIT V: ULTRASONIC AND ACOUSTIC EMISSION TECHNIQUES 9 Hrs

Production of ultrasonic waves - different types of waves - general characteristics of waves-pulse echo method -A,B,C scans - Principles of acoustic emission techniques - Advantages and limitations - Instrumentation - Applications.

MME18CE08 **CONCURRENT ENGINEERING** **3 0 0 3**

OBJECTIVE: The student will learn

- Concepts and analysis of latest method of manufacturing systems

UNIT I: INTRODUCTION **5 Hrs**

Extensive definition of CE - CE design methodologies - Organizing for CE - CE tool box collaborative product development

UNIT II: USE OF INFORMATION TECHNOLOGY **10 Hrs**

IT support - Solid modeling - Product data management - Collaborative product commerce – Artificial Intelligence - Expert systems - Software hardware co-design.

UNIT III: DESIGN STAGE **10 Hrs**

Life-cycle design of products - opportunity for manufacturing enterprises - modality of Concurrent Engineering Design - Automated analysis idealization control - Concurrent engineering in optimal structural design - Real time constraints.

UNIT IV: MANUFACTURING CONCEPTS AND ANALYSIS **10 Hrs**

Manufacturing competitiveness - Checking the design process - conceptual design mechanism – Qualitative physical approach - An intelligent design for manufacturing system - JIT system - low inventory - modular - Modeling and reasoning for computer based assembly planning - Design of Automated manufacturing.

UNIT V: PROJECT MANAGEMENT **10 Hrs**

Life Cycle semi realization - design for economics - evaluation of design for manufacturing cost – concurrent mechanical design - decomposition in concurrent design - negotiation in concurrent engineering design studies - product realization taxonomy - plan for Project Management on new product development – bottleneck technology development- Case Studies

Total No. of Hrs : 45

M.Tech – CAD/CAM

MME18CE02 NANO TECHNOLOGY 3 0 0 3

OBJECTIVES: The student will learn

- Basic concepts of nano systems and the various methods of fabrication.
- Various nano materials and nano measurement techniques

.

UNIT I: OVER VIEW OF NANOTECHNOLOGY 6 Hrs.

Definition – historical development – properties, design and fabrication Nanosystems, , working principle ,applications and advantages of nano system. Nanomaterials – ordered oxides – Nano arrays – potential health effects

UNIT II: NANODEFECTS, NANO PARTILES AND NANOLAYERS 8 Hrs.

Nanodefects in crystals – applications – Nuclear Track nano defects. Fabrication of nano particles – LASER ablation – sol gels – precipitation of quantum dots.Nano layers – PVD,CVD ,Epitaxy and ion implantation – formation of Silicon oxide- chemical composition – doping properties – optical properties

UNIT III: NANOSTRUCTURING 8 Hrs.

Nanophotolithography – introduction – techniques – optical – electron beam – ion beam – X-ray and Synchrotron – nanolithography for microelectronic industry – nanopolishign of Diamond – Etching of Nano structures – Nano imprinting technology – Focused ion beams - LASER interference Lithography nanoarrays –Near-Field Optics - case studies and Trends

UNIT IV : SCIENCE AND SYNTHESIS OF NANO MATERIALS 12 Hrs.

Classification of nano structures – Effects of nano scale dimensions on various properties – structural, thermal, chemical, magnetic, optical and electronic properties fluid dynamics –Effect of nano scale dimensions on mechanical properties - vibration, bending, and fracture. Nanoparticles, Sol-Gel Synthesis, Inert Gas Condensation, High energy Ball Milling, Plasma Synthesis, Electro deposition and other techniques. Synthesis of Carbon nanotubes – Solid carbon source based production techniques – Gaseous carbon source based production techniques – Diamond like carbon coating. Top down and bottom up processes.

UNIT V: CHARACTERIZATION OF NANO MATERIALS 11 Hrs.

Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, confocal LASER scanning microscopy - transmission electron microscopy, transmission electron microscopy, scanning tunneling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

Total Hours - 45
